The *Attalea* palm is plentiful over large areas in the southern part of the State of Bahia, and exists in northern Espiritu Santo and to some extent in upper Bahia and Alagoas.

Gathering and Preparing the Fiber.

Piassava is gathered when ripe by drawing the fibers out from folds wound spirally around the tree at the base of the leaves, which seem to grow as a protection to the palm. It is extracted by unwinding and drawing out, the bunches obtained measuring 8 to 15 feet in length. The palms are extremely prolific in their fiber production, as from both varieties piassava can be gathered twice annually, a single tree yielding 4 to 7 pounds at each drawing. The yield can be increased 30 to 40 per cent by chopping down the tree and stripping it of all fiber, and unfortunately this wasteful method is so common that unless legislative action is soon taken the extinction of the piassava palms in the central-forest zone is merely a matter of time.

After gathering the fiber is allowed to dry for a time under cover, when the fibers are drawn singly from the tangled bunches and assorted as to length and grade. The darker-colored fibers (of a dark-brown shade) are the more valuable, as are the thicker and longer strands. The thick fibers are used for brooms and rough brushes and the long ones for ropes and cords. The product is prepared for market in sheaves weighing 90 to 110 pounds, and sells locally for 300 to 500 reis per kilo, or approximately 4 to 6 cents per pound.

[An interesting article on the growth and general use of piassava fiber in Brazil, written by Consul Pierre Paul Demers, of Bahia, appeared in *Daily Consular and Trade Reports* for Apr. 7, 1909.]

A HONOLULU COAL DEAL.

[Consul General George H. Scidmore, Yokohama, Japan, July 5, 1910.]

A big deal is reported by the Japan Mail between the Hokkaido Tanko Kisen Kaisha and the Interisland S. N. Co. at Honolulu for the supply of 130,000 tons of Yubari coal. The first shipment has just been made. This is the first big export of Japanese coal to Hawaii, which has heretofore bought Australian coal.

The Japan Chronicle of July 30 states that Japanese collieries have curtailed their output by over 20 per cent this year as compared with last. In spite of this stocks are increasing. According to the latest investigations quoted by the Mainichi of Osaka, stocks of the collieries amount to 546,000 tons, and those on the Moji and Wakamatsu markets to 738,000 tons, totaling 1,284,000 tons. When small stocks in other parts of the country are taken into account, the grand total will exceed the unprecedented figure of 1,300,000 tons.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 308 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

- Aluminum, oils, cotton, etc.,** No. 18263.—A business man in Sweden informs an American consular officer that he wishes to be placed in communication with producers of aluminum in sheets and pigs, cotton, lubricating oils, resins, cotton waste, and saltpeter.
- Towelling,** No. 18264.—A manufacturers' agent in Canada has requested an American consular officer to supply the names and addresses of American exporters of linen towelling 15, 16, 17, 18, and 20 inches wide, in pieces of about 50 yards, suitable for rollers. Prices should specify extra charge made for red border and three stamped letters.
- Sanitary and plumbing supplies, hardware, etc.,** No. 18265.—The commercial attaché of the Department of Commerce in Russia reports the name of a business man in that country who is interested in sanitary and plumbing supplies, stoves, ranges, hardware, etc. He desires to secure agencies.
- Grains, food products, etc.,** No. 18266.—A commission merchant in Cuba informs an American consular officer that he desires to represent American exporters of corn, oats, barley, hay, beans and peas of all kinds, potatoes, olive oil, cottonseed oil, and rice.
- Artificial limbs,** No. 18267.—A business man in England informs an American consular officer that he desires to be placed in communication with American manufacturers and exporters of artificial limbs.
- Spirits,** No. 18268.—A commercial organization informs the commercial attaché of the Department of Commerce in Russia that it would like to receive the names and addresses of American importers of spirits, vodka, etc.
- Hosiery, underwear, watches and clocks, etc.,** No. 18269.—A wholesale and retail firm in Africa informs an American consular officer that it desires to receive catalogues and full information relative to hosiery, piece goods of all kinds, steel and leather trunks, underwear, and watches and clocks of the cheaper grades. Correspondence may be in English.
- Iron sheets,** No. 18270.—An American consular officer in the Netherlands writes that an agent in his district desires to represent American manufacturers and exporters of galvanized corrugated iron sheets.
- Drugs and chemicals,** No. 18271.—A druggist in Siberia informs an American consular officer that he desires to receive the names and addresses of American exporters of drugs and chemicals. Quotations are desired c. i. f. Vladivostok. Weights, measurements, etc., should be stated in Russian equivalents, and correspondence should be in the Russian language.
- Leather and screens,** No. 18272.—A firm in China informs an American consular officer that it wishes to establish commercial relations with American manufacturers and exporters of genuine and imitation leather for upholstering furniture and wire window screens. Quotations are desired f. o. b. New York or San Francisco. Correspondence may be in English.
- Sporting goods,** No. 18273.—An American consular officer in the Netherlands transmits the name of a dealer in his district who desires to communicate with American manufacturers and exporters of all kinds of sporting goods, such as cricket, hockey, football, lawn tennis, golf, fencing, boxing, etc.
- Chinaware, cutlery, etc.,** No. 18274.—A wholesale and retail firm in Africa has requested an American consular officer to supply catalogues and full information relative to chinaware, cutlery, enamel ware, glassware, locks, and cash boxes. Quotations are desired c. i. f., if possible. Correspondence may be in English.
- Carpets,** No. 18275.—A firm in China has requested an American consular officer to supply the names and addresses of American firms which are in a position to import about 6,000 square feet of carpet per month. Correspondence may be in English.
- Cloth,** No. 18276.—An American consular officer in Canada reports that a firm in his district desires to communicate with American manufacturers and exporters of American cloth similar to the sample, which may be examined at the Bureau or its branch offices. (Refer to file No. 65133.)

AMERICAN SEED AND NURSERY STOCK FOR CHINA.

[Commercial Attaché Julean H. Arnold, Peking, Aug. 9.]

It is suggested that American dealers in seeds and nursery stock furnish this office with a number of catalogues, as we often receive inquiries from residents in this country for American seed and nursery catalogues. The climate of Peking is dry and cold in the winter and damp and hot in the summer, with a temperature ranging between zero and 100° Fahrenheit.

TRANSIT VIA THE PORT OF VLADIVOSTOK.

[Consul J. K. Caldwell, Vladivostok, Siberia, Aug. 10.]

The Dalekaya Okrayna announces that, according to a telegram received by the commercial department of the Chinese Eastern Railway, free transit to Manchuria via the port of Vladivostok has been granted for the following articles: Rice, beet roots, cabbage, pepper, and salt. Shipments must pass through the customhouse.

PARAGUAY GRANTS REFRIGERATING CONCESSION.

[Consul Samuel Hamilton Wiley, Asuncion, July 24.]

The concession sought by Mr. G. L. Rickard, an American citizen, to establish a meat-freezing plant at Asuncion was granted on July 14, 1915. The concession was granted as applied for [see *COMMERCE REPORTS* for Jan. 27, 1915], with the addition that the recipient of the concession shall put up a guaranty of \$10,000. This has been done.

TO ANTIPODES VIA PANAMA.

[Montreal, Canada, Gazette, Sept. 8.]

The New Zealand Shipping Co.'s steamship *Ashburton*, which will arrive at Montreal on September 18, will make the voyage from here to New Zealand and Australian ports by way of the Panama Canal. This will be the first time that a vessel of that company will use the route. The *Mamara*, of the same line, will arrive here on September 10.

A MARKET SOUGHT FOR GREEK CURRANTS AND FIGS.

[Consular Agent S. Carapateas, Kalamata, Aug. 14.]

Although the present European war broke out before the beginning of the 1914 currant and fig seasons, conditions for the exportation of these fruits were more favorable last year than they are expected to be this year, and both growers and shippers are greatly discouraged. Italy's entrance into the war has closed important markets for Greek fruit, and it is anticipated that only a small part of the new crop will be exported and at low prices.

Several local firms have recently decided to form an association, in order to cooperate for the improvement of the quality and packing of Kalamata exports, to find new markets therefor, and to further the interests of the trade generally. Twenty-two exporters have now signed the constitution and by-laws of this association, but as yet they have elected neither president nor directors.

New Season's Yield.

The currant crop for the coming year (beginning Sept. 1) is expected to be about 35,000,000 pounds, against 50,000,000 pounds last year, a falling off of about 30 per cent. This decrease is due to unfavorable weather conditions and to the development of injurious insect pests, chiefly the *Peronosporos*. It is expected here that the average market price of this fruit will not exceed 1.9 cents per pound.

Weather conditions were rather favorable for figs, and indications are that the fig crop for this year will be of excellent quality and will amount to 27,000,000 pounds against 21,000,000 pounds for 1914, an increase of nearly 29 per cent. The average market price, however, may not exceed 2 cents per pound, because of the closing of important markets, as already noted. Although it is stated in a reliable quarter here that large quantities of good edible figs will be shipped this year to Great Britain, exporters are looking to the United States as the only market of consumption and have inquired at this office concerning the possibility of being put in direct touch with American importers of this fruit.

[A list of exporters of Kalamata figs may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65616.]

LEADING ARTICLES IN AMERICAN IMPORT TRADE.

The relative value of leading articles in the import trade of the United States in the fiscal year 1915, published in **COMMERCE REPORTS** for September 9, contained some typographical errors, correction of which is shown as follows:

Articles.	Fiscal year—		Articles.	Fiscal year—	
	1914	1915		1914	1915
Silk	\$100,900,000	\$83,100,000	Dairy products.....	\$15,400,000	\$14,700,000
Wool	\$3,200,000	\$8,200,000	Wood.....	18,600,000	13,700,000
Fiber manufactures.....	82,400,000	61,600,000	Spirits, wines, etc.....	20,380,000	15,400,000
Wood manufactures.....	44,400,000	47,000,000	Flaxseed.....	10,600,000	12,400,000
Cotton manufactures.....	70,700,000	46,200,000	Gums.....	12,700,000	11,800,000

PACKING FOR MEXICAN INTERIOR POINTS.

[Consul William E. Alger, Mazatlan, Sinaloa, Aug. 10.]

Goods shipped to Mazatlan and intended for the mines in the interior should, to be secure, have extra heavy packing for ocean and muleback transportation and for very rough handling en route. All cases and crates should be of heavy material and iron strapped, and all burlapped packages would best be doubly wrapped and strongly sewed.

Machinery should be sent knocked down, with all bearings and polished surfaces heavily coated with thick oil to prevent rusting. All threaded ends of pipe and fittings, rods, bolts, etc., should be protected from rust and abrasion en route. Fittings must not be shipped on ends of pipe, but should be boxed separately.

Packages should weigh 150 pounds gross—not more (and as little under that weight as possible), with the exception of machinery, which may weigh up to 350 pounds gross, if necessary. Each package should be distinctly marked and numbered. Invoices and packing lists should be sent in quadruplicate. Invoices must have net weights of each item, also net and gross weights and measurements of cases.

[Complete information as to form of invoice and packing requirements and a schedule of consular fees covering shipments of merchandise to Mexico appear in a monograph, "Consular Regulations of Foreign Countries," Tariff Series No. 24 (revised edition), just issued by the Bureau of Foreign and Domestic Commerce. Copies of this booklet may be obtained from the branch offices of the Bureau or from the Superintendent of Documents, Government Printing Office, Washington, D. C.; price, 10 cents each.]

RICE CONSUMPTION OF ALEPPO DISTRICT.

[Consul Jesse B. Jackson, Aleppo, Syria, July 29.]

"Pilaff" (pilau), the Turkish national dish, is the favorite of all classes, and is composed almost entirely of rice. For this purpose 80 to 100 tons of the cereal are consumed yearly in the Aleppo consular district, 30 tons of which are raised in Aleppo Province or imported from the Province of Diarbekir, while the balance is imported from Egypt and Rangoon. The amount of rice imported depends largely upon the local price of wheat, which grain is used as a substitute for rice by the very poor. When wheat sells at moderate prices, 35 to 40 tons of Egyptian and 15 to 30 tons of Rangoon rice are imported. When wheat is dear 40 to 45 tons of rice are brought in from Egypt and 30 to 35 tons from Rangoon annually.

The following are the qualities and wholesale Aleppo prices of rice in normal times: Egyptian, "japapo," "special," and "fayoum," selling at 3.7 to 4.3 cents, 4.2 to 4.7 cents, and 4.46 to 4.94 cents, respectively, per pound, and Rangoon at 2.6 to 2.7 cents per pound. The local rice and that imported from Diarbekir sells normally at 3.21 to 3.95 cents a pound, but the present price of the Aleppo product is 6.9 cents and that from Diarbekir 7.3 cents a pound. There are no other qualities on the market.

The wheat crop of this vicinity has been good for the last several years, and the population finds it convenient to use it in place of rice.

TSINGTAU'S MODERN ABATTOIR.

[Consul Willys R. Peck, Tsingtau, China, Aug. 2.]

The Government-owned slaughterhouse in Tsingtau, constructed by the German Government early in the history of the colony, is being conducted by the Japanese forces in occupation of the port in the same careful way that has always characterized its operation. The plant consists of spacious buildings for the separate slaughtering of cattle and smaller animals, an ice-making and cold-storage plants, laboratories, detention sheds, residences for the staff, etc.

Everywhere are to be found overhead traveling cranes, tiled walls, cement floors, and every precaution and device that modern science can suggest for the detection and combating of disease. However, the present superintendent, Capt. K. Kobayashi, is desirous of obtaining catalogues illustrating the latest American machinery and instruments for use in a municipal abattoir and would be pleased to receive such literature accompanied by full information regarding prices, discounts, freight, etc. If preferred, these may be sent through the American consulate.

Meat Trade of the Port—Wholesale Prices.

The average monthly consumption of meat in Tsingtau during German occupation was 1,505 animals; since Japanese occupation, 773. These animals are drawn principally from the Province of Shantung, and the cattle, especially, are well known for size and good condition, although occasional cases of rinderpest are found among them. The superintendent reports an almost entire absence of tuberculosis. The average weight of these cattle on the hoof is 1,100 pounds.

The wholesale price of cattle on the hoof is about \$0.02 United States currency per pound, and of meat with bone between \$0.03 and \$0.04 per pound. The hides are commonly disposed of for \$7.20, the heads for \$2.40, and the blood from one animal for \$0.27 United States currency. The charges for slaughtering are \$1.20 for cattle, \$0.70 for hogs, and \$0.30 for sheep and calves. If, however, any one person applies for the slaughtering of more than 1,000 head of cattle in a single month the charge is reduced to \$0.80 United States currency per head.

By-products, such as bones, horns, intestines, etc., are sold to local Chinese merchants.

Exports of Meat and Live Cattle—Cold Storage.

Although during the first six months of 1915 there was no large exportation of meat or cattle from Tsingtau, the port is nevertheless the foremost in China in this regard. In 1913 (the latest year for which complete statistics are available) the Leased Territory of Kiaochow sent out 40 per cent of China's export of cattle and 48 per cent of its export of fresh meat. In 1913, 115,719 hundredweight (of 100 pounds) of fresh beef were exported and in the first six months of 1914 52,978 quarters of beef. In 1913 28,413 head of live cattle were exported and in the first half of 1914 12,493 head, a proportionate decrease of 12 per cent. None of this export went to the Philippine Islands or other American ports. So far as known the great bulk of it went to Vladivostok.

While the ice-making plant is turning out ice for outside use, the cold-storage plant forming a part of the slaughterhouse equipment is cooled by salt-water evaporation, which keeps it at a temperature of about 34° F. Space in the cold-storage rooms rents at \$12.77 United States currency, per square meter (square meter equals 10.764 square feet).

All cattle slaughtered in Tsingtau must be slaughtered in the Government abattoir, and all fresh meat brought within the municipal limits must be inspected and stamped by the Government veterinaries attached to it.

BANK DEPOSIT INTEREST REDUCED IN JAPAN.

[Extract from Japan Times of Aug. 10, by Consul General George H. Scidmore, Yokohama.]

Bankers at last decided on reducing deposit rates on August 7, as the result of discussion in the Tokyo Bankers' Association: The new rates are 4 per cent per annum on fixed deposits, a reduction of 1 per cent; 0.004 per cent per day on current account, a reduction of 0.001 per cent; and 0.009 per cent per day on petty accounts, a reduction of 0.001 per cent. The rate on fixed deposits went into operation yesterday, while the rates on other items of deposits will come into operation August 11.

In Osaka, Kobe, Yokohama, and Nagoya the same decision was reached. All bankers in other cities will sooner or later follow their example. Semiofficial banks also have, it is reported, decided to follow their confreres in Tokyo, though the decisions they have reached are still informal. Savings-deposit rates, on the other hand, will not be changed, pending the change in postal-savings banks' rates.

This step taken by bankers generally is an event which has no parallel in the history of banking in this country. In the level of rates, for instance, there is no other parallel to be found in the past fluctuations of money in this country than in the rates adopted by bankers on March 1, 1910. The frequency of reduction again beats all former records. However, no more effect than a temporary enlivening of the stock market can be expected from this extraordinary step, as all indications point to the continuance of the slack tendency for the time being.

COLOMBIAN MARKET FOR COTTON YARNS.

The Bureau of Foreign and Domestic Commerce has received from Consul Isaac A. Manning, at Barranquilla, Colombia, a list of the concerns importing cotton yarns in Colombia through the port of Barranquilla, with a statement, for each firm, of the quantities, value, and source of supply for the period from January 1, 1914, to June 30, 1915. This has been prepared as a confidential trade list, and may be obtained from the Bureau or its branch offices. Consul Manning writes that since the early part of 1915 more attention has been given this trade by a limited number of cotton-yarn houses in the United States, and that, through the efforts of the consulate to bring the American manufacturer or his agent and the local importer together, a number of orders—amounting to several thousand dollars—have recently been placed by three Colombian firms in the United States.

COAL TRADE AT VALENCIA.

[Consul Claude I. Dawson, Valencia, Spain, Aug. 5.]

Although the coal movement at Valencia reaches the approximate figure of 250,000 metric tons (2,204.6 pounds to the ton) yearly, it is so distributed that hardly one-fifth comes within the scope of freely competitive business.

About 20 per cent of the total is native coal from the Asturias mines of northern Spain, which always has a limited outlet because it is slightly cheaper than imported coal, though admittedly of inferior grade. The tendency in recent years, however, has been to discard it, as shown by steadily declining receipts, which now range from 50,000 to 60,000 tons as compared with a former yearly consumption in excess of 80,000 tons.

Approximately 150,000 tons of foreign coal are imported yearly for three concerns. All of it is contracted for outside of Spain and constitutes but a fraction of the gross requirements of the interested concerns in the kingdom at large. Naturally their purchasing agents demand and receive the personal concurrence of foreign shippers or their agents who desire to bid for the business. Only about 50,000 tons of foreign coal are purchased in the open market, by seven retail concerns in Valencia or parent corporations in other localities, for general consumption.

Principal Consumers—Trade from Standpoint of American Exporters.

The three large consumers are the Northern Railroad of Spain (Ferrocarriles del Norte de España), about 100,000 tons, purchased by the main office in Paris; the Aragon Central Railroad (Ferrocarril Central de Aragon), 20,000 to 25,000 tons, with the purchasing office in Brussels; and Lebon & Cia., 25,000 to 30,000 tons, also contracted for by its Paris headquarters for a chain of gas works in Mediterranean ports.

American gas coal has been used here in varying quantities for many years, and of late the Northern Railroad of Spain has received several cargoes from the United States and is said to have arrangements for an indefinite period. So far as can be ascertained, the Aragon Central Railroad has made no purchases for Valencia in the United States.

Interested exporters in the United States would gain nothing by addressing inquiries to Valencia, but should arrange to send personal representatives to the headquarters of the concerns mentioned.

The general coal trade of Valencia and tributary territory is not alluring from the American exporter's standpoint. Fifty thousand tons is a small consumption, even in view of the limited industrial development of the region. An important dealer estimates that hardly 20 factories use as much as 500 tons a year, while the great majority consume between 5 and 25 tons. Coal is not used to an appreciable extent for heating purposes. Winters are very mild, and during the three months or less of coldest weather coke and charcoal are the fuels used, the former being supplied by the gas works and the latter by individual enterprise.

Use of Coal Tends to Decrease—Why England Has Commanded Valencian Market.

Quite recently coal consumption has been almost stationary, with a slight tendency to decrease with the gradually increasing supply of cheap hydroelectric power. Steam is now used as auxiliary power

in many plants where formerly it was primary motive power. Electric power is also displacing steam in numerous irrigation plants. In general it may be conceded that the use of coal in this region—except by public-service corporations—will not increase; rather may it be expected to decrease as new electric developments now contemplated are completed and in operation and transmission lines are extended to regions not hitherto served.

Before the war England supplied nearly all foreign coal consumed here. The only exceptions consisted of occasional cargoes of gas coal from the United States and sometimes from Belgium. The English monopoly was easily maintained by reason of the high reputation enjoyed by Cardiff and Newcastle coals and the efficiency of maritime communications. A numerous fleet of fruit vessels plies nine months of the year between this coast and England, carrying oranges, onions, and other products of the soil and returning with any cargo that is offered. The latter consists chiefly of coal and fertilizing materials, which together embrace considerably more than half of Valencian imports, and as England is at once a principal producer of these necessities and the largest consumer of Valencian exports it was quite natural that her coal should predominate here. The trade was further promoted by the sharp competition among fruit vessels, which, in time of peace, insured low freight rates and enabled local dealers to carry on business with limited capital investment, giving rise to the now well-established custom of ordering frequently and in small quantities.

Comparatively Small Cargoes Are Imported.

Cargoes of English coal seldom exceed 2,000 tons and are generally not more than 1,000 tons. Quantities of 100 to 500 tons are quite usual. Local competition and the limited gross consumption (a considerable part of which is restricted by contract to English coal) compel dealers to maintain this system of buying so far as conditions permit, in order to avoid being caught with large stocks on hand in times of sudden price changes, fluctuation in ocean freights, etc.

For these reasons no one firm here feels disposed to handle cargoes of 3,500 tons or more from America; and smaller shipments would prove uneconomical. Of late an American coal exporter investigated this field in person and reached the conclusion that the obstacles outlined would prevent business unless local importers would combine enough small orders to make a full cargo. One of the dealers interviewed said this might be done if all of his colleagues would agree to protect each other by maintaining prices until the cargo was disposed of. He intimated that conferences were being held with this in view.

There are only four independent coal importers of importance in Valencia. Another firm handling bunker coal is merely the agent (without authority to purchase) of a larger concern in Barcelona having the privilege of maintaining floating coal depots in Spanish ports. A sixth concern is bound by contract with English collieries (through partnership connections) to supply its entire needs from that market.

Discharging the Coal—Fiscal Charges Temporarily Suspended.

The facilities for discharging coal at Valencia are fairly good. The seaside of two docks is set apart for this purpose, each having

accommodations for one very large vessel and being equipped with two 1-ton electric traveling cranes. Hand labor is also employed, with the aid of the typical mat baskets used here in all kinds of manual labor. The average rate of discharge is 250 to 300 metric tons per day (metric ton=2,204.6 pounds), but this varies with the facilities offered by the ship. Some contracts specify as much as 400 and 500 tons per day of 10 hours. The steamship *Rosebank*, recently from Baltimore with coal for railroad use, discharged at the latter rate. Receivers do the unloading, but collect from the ship at the rate of 1.50 pesetas (about \$0.27) per ton, although the actual cost usually works out at less.

It is calculated that steamers of 8,000 to 10,000 dead-weight capacity can be accommodated in the port of Valencia.

All fiscal charges on imported coal (except port duties) are suspended temporarily. Usually the two chief items are customs duty and transport tax, the former being about \$0.68 a ton and the latter \$0.39 on American coal and \$0.09 on that from European countries.

[A list of coal importers in Valencia may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65144.]

SHIPBUILDING ACTIVITY IN JAPAN.

[Extract from Japan Advertiser of July 11, by Consul General George H. Scidmore, Yokohama; see also COMMERCE REPORTS for May 15, June 24, and Sept. 2, 1915.]

The recent activity in the shipping business has caused a great demand for new ships, but as most of the European and American shipping yards are fully occupied * * * the shipbuilding yards in Japan are having a busy time. According to recent investigations by the authorities concerned, the number of ships now being built in various shipbuilding yards are as follows:

Mitsubishi Dock at Nagasaki: One vessel of 7,300 tons and 1 of 9,300 tons. Kawasaki Dock at Kobe: Two of 7,300 tons each, 1 of 9,600 tons, and 1 of 2,600 tons. Osaka Tekkojo: One of 4,000 tons and 1 of 2,600 tons; a total of 8 vessels and 50,300 tons.

The following is the list of the ships for which various shipbuilding yards have received orders:

Mitsubishi Dock at Nagasaki: Four vessels of 7,300 tons each and 2 of 3,700 tons each. Kawasaki Dock at Kobe: Three of 7,300 tons each, 2 of 4,400 tons each, 1 of 3,000 tons, and 1 of 1,700 tons. Osaka Tekkojo: One of 7,300 tons, 6 of 5,000 tons each, 1 of 3,200 tons, and 12 of 1,100 tons each. Mitsubishi Dock at Kobe: One of 1,800 tons, 2 of 5,300 tons each, and 4 of 2,200 tons each. Fujinagata Dock: One of 2,000 tons. Harima Dock: Two of 1,100 tons each. Making a total of 185,700 tons, representing 43 vessels.

It is reported that the demand for new ships is very keen, but the present plants of the existing shipbuilding yards admit of no further orders being accepted. It is said, for example, that the Mitsui Bussan Kaisha requires two more cargo boats of 5,000 tons each, and as the Japanese shipbuilding yards are full, the company has communicated with various builders in Norway and Holland, but failed to place the order. Therefore, that company is now negotiating with the dock companies in Shanghai and Hongkong.

STATISTICS OF VENEZUELAN BANKS.

[Minister Preston McGoodwin, Caracas, Aug. 14.]

There is presented herewith a table showing the reserves, deposits in accounts current, credits in accounts current, cash, cash holdings, advances, and discounts of the Bank of Venezuela, Caracas, at the close of business June 30, 1915; of the Bank of Caracas, of this city, on July 31, 1915; and of the Bank of Maracaibo, of Maracaibo, on July 31, 1915. While these three are the only chartered banks in Venezuela maintaining numerous branches and agencies throughout the Republic, many business houses engage in the banking business to some extent, especially in the sale of drafts, but no figures are obtainable as to the extent of their activity. The amounts given below are in United States gold:

Items.	Bank of Venezuela, June 30, 1915.	Bank of Caracas, July 31, 1915.	Bank of Maracaibo, July 31 1915.
Reserves.....	\$1, 140, 371	\$245, 102	\$14, 028
Deposits in accounts current.....	3, 283, 808	683, 265	45, 828
Credits in accounts current.....	1, 599, 675	478, 477	217, 845
Cash.....	2, 622, 569	931, 505	161, 576
Cash holdings.....	3, 824, 727	5, 294, 306	87, 268
Advances.....	1, 624, 450	481, 225	237, 957
Discounts.....	305, 695	82, 968	803

CHILEAN CUSTOMHOUSE RECEIPTS.

[Commercial Attaché Verne L. Havens, Santiago, Aug. 10.]

During the month of July, 1915, the Chilean customhouse income from import duties was \$958,000 and from export duties \$2,950,000, a total of \$3,908,000, as compared with \$1,809,000 and \$2,886,000, respectively, during the corresponding month of 1914.

The record for the first seven months of 1915 was \$5,475,000 and \$13,000,000 for import and export receipts, as compared with \$12,400,000 import revenue and \$18,000,000 export revenue during the first seven months of 1914.

The 1915 percentage of 1914 income during July was 53 per cent on import revenue and 102 per cent of the export revenue. The corresponding percentages for the first seven months were 44 per cent and 72 per cent. The income records of the customhouses indicate, therefore, that July was 20 per cent better than the average for the first seven months of the year as regards importation and 42 per cent better as regards exportation.

JAPANESE TRANSLUCENT FISHLINES.

[Consul George N. West, Kobe, Aug. 9.]

The manufacture of fishing lines from wild-cocoon silk is carried on in Osaka, the lines made by one of the leading firms being marketed under the trade name of Tegusu. Tegusu lines are said to be invisible in the water and, for this reason, to be especially adapted for taking game fish. A set of samples, with prices, is forwarded [and may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices; ask for file No. 65566].

MINING REQUISITES IN SOUTH AFRICA.

[South African Mining Journal.]

While the buying is quite general, yet the outstanding feature seems the demand from the group representing the Government areas mine, which will require stores and materials more abundantly in view of their new 100-stamp battery working, and it is felt that it would be unwise in delaying too long. Another incentive is the somewhat sudden demand from the Rhodesian mines, now beginning to awaken to the fact that mining stores and materials are really and actually getting scarcer and dearer. There are agents in town for the special purpose of securing mining goods for Rhodesia, and they have been excellent customers to the secondhand yards for any and every kind of battery and machinery spares. In addition to this they have bought rather freely of engines, boilers, pumps, and other machines in daily use in the mines.

Battery spares are exceptionally scarce, and dealers are hustling around to secure lines to bring into the market. Mining tramways material is also on the lean side, particularly 16 and 20 pound rails.

Electrical Goods—Replacing Continental Supplies.

As the weeks roll by the difficulty of obtaining supplies becomes greater. Round blocks, 3½ inches, for wall switches are so scarce that two local mechanics have commenced making them at \$0.85 per dozen, as compared with imported at \$0.36 under normal conditions. Ceiling roses are unobtainable in any quantity. Double pure rubber flex up to municipal standard has advanced 100 per cent, and is very difficult to obtain at that. Coils of wire have gone up to such an extent that in some cases it makes it difficult for the smaller contractors to tender, especially as all other electrical goods have gone up from 20 to 25 per cent, and supplies can not be relied on at these enhanced values; therefore the firms holding stocks necessary for a contemplated contract are the only people who can tender with any safety.

Glass lamp shades, as well as all kinds of porcelain ware, have risen anything from 100 to 300 per cent since the war started, simply because the continental supplies have had to be replaced with British and American goods, also a few consignments from Holland. It is recognized that electrical "smalls" require very good and up-to-date machinery, which can only be provided by manufacturers dealing with big outputs, therefore very little can be done in a limited period, and not much can be expected from the Johannesburg factories; but what small makers are doing is to use up second-hand parts and put them together for lamp holders and similar articles, at a cost of about double the imported. What is surprising is that the ordinary lamps have not advanced much. This is explained by the fact that a British lamp was especially designed and made for the purpose of competing with the continental variety, and sold for practically the same price as the latter before the war.

Glass, Oils, and Paints.

Notwithstanding the higher level of prices, business is progressing smoothly, with a fair amount of repairs in evidence. Although the prices of leads and oils remain the same, the tendency is firmer and can not be relied upon for any length of time. Sheet window glass is scarce; the popular size of 30 by 15 inches is now \$0.67, as against \$0.42 a year ago. British plate glass is anything but plentiful at \$1.09, as compared with \$0.67 before the war. The special colorings for walls have not risen much in value, as the old stocks are lasting out, but immediately these are exhausted and replaced by new importations the price must rise from 15 to 20 per cent.

Timber and Galvanized Roofing.

The mines have been purchasing more largely of timber, and the prices have gone up a farthing (about one-half cent) per foot since last week. As regards galvanized roofing iron, that also has advanced a farthing per foot. An idea is abroad to see if something can not be done to replace galvanized iron for roofing purposes. Several attempts have been made with slates, as at one time some very special up-to-date machinery was imported for that purpose, but galvanized iron then became cheaper, and heavier woodwork was required for both slates and the South African-made tiles, which all assisted to damp the enthusiasm of local makers.

[Consul Edwin N. Gunsaulus, Johannesburg, South Africa, July 22.]

Prices of Mining Materials, Chemicals, and Electrical Goods.

Following are the current price quotations for some of the materials largely used for mining purposes. These prices are, however, subject to quick changes.

Mining and building hardware—Iron, imported, bar, \$4.25 up (local, \$3.04 up), angle, \$3.89 per 100 pounds; steel bar, \$4.01; drill, \$0.09 per pound; tool, \$0.14 per pound; plates, \$4.37 to \$5.23 per 100 pounds; hexagon bolts, $\frac{3}{8}$ inch, \$0.12 per pound; $\frac{1}{2}$ inch up to 2 inches, \$9.12; 6 inches, \$8.51; over 6 inches, \$7.90; $\frac{3}{4}$ inch up to 2 $\frac{1}{2}$ inches, \$8.51; over, \$7.90; $\frac{3}{4}$ inch up to 2 $\frac{1}{2}$ inches, \$8.51; over, \$7.90; $\frac{3}{4}$ inch up to 2 $\frac{1}{2}$ inches, \$7.29; over, \$7.05; $\frac{3}{4}$ inch and 1 inch, \$7.05, all per 100 pounds; nuts, $\frac{3}{8}$ inch, \$0.15 per pound; $\frac{1}{2}$ inch, \$9.73 per 100 pounds; then up to 1 $\frac{1}{2}$ inches, \$9.12 per 100 pounds; washers, \$5.10.

Mercury, \$85.16 per 75-pound bottle; bichromate potash, \$0.14 per pound; chlorate, \$0.24 per pound; permanganate, \$0.60 per pound; alum, \$0.08 per pound; carbolic acid, \$0.48; borax, \$4.86 per hundred-weight; cyanide potash, unobtainable; cyanide soda, \$0.30 per pound; hypo, \$0.60 per pound; acetate lead, \$14.60 per 100 pounds; litharge, assay, \$12.17, commercial, \$10.96, per 100 pounds; zinc sheets, \$0.32 per pound; plumbago crucibles, \$0.09 apiece.

Lamps, British, \$3.89 to \$4.86 wholesale and \$5.10 to \$6.57 per dozen retail; Holland, \$4.38 to \$5.84 wholesale and \$5.84 to \$7.30 retail; double pure rubber flex, \$0.12 per yard; 3/20 coils of wire, \$5.23; same, 3/22, \$4.26; round blocks, 3 $\frac{1}{4}$ inches, \$0.85 per dozen, local; lamp-holder cord grips, \$1.82 per dozen; switches, \$2.92 per dozen; British opal glass shades, \$5.10 to \$5.84 per dozen; Bohemian shades, finished; porcelain shackles, \$3.53 per dozen; same, bobbins, \$2.68 to \$3.65 per 100; cleats, \$3.65 per 100; P. O. insulators, \$4.38; motors, 3 horsepower, about \$146, new.

In the prices above quoted conversions have been made at the rate of \$4.8665 to the pound sterling.

[An article by Consul Gunsaulus on "Purchases of Supplies by Transvaal Mines" appeared in *COMMERCE REPORTS* for July 14, 1915.]

BRITISH COLUMBIA FISHERY STATISTICS.

[Vice Consul G. C. Woodward, Vancouver, British Columbia, Canada, Sept. 3.]

The total value of the catch of British Columbia for the six months ended June 30, 1915, was \$1,219,729, as compared with \$1,068,477 during the first half of the preceding year, an increase of \$151,252. The value of the catch for the whole Dominion during the same periods was \$6,125,922 and \$6,208,125, a decrease of \$82,203.

The principal items of the British Columbia catch were salmon, cod, herring, and halibut, amounting in 1915 to \$303,095, \$83,620, \$257,182, and \$536,340, respectively, against corresponding values of \$253,303, \$81,590, \$219,101, and \$456,489 in January-June, 1914. The most important items as compared with the Dominion catch were salmon and halibut, the value of the former being over 54 per cent and of the latter approximately 60 per cent of the whole Canadian production in 1915, and more than 34 per cent of the former and nearly 55 per cent of the latter in 1914.

PROSPERITY OF JAPANESE SHIPPING LINE.

[Extract from Japan Mail of July 2, by Consul General George H. Scidmore, Yokohama.]

The Nippon Yusen Kaisha¹ held an extraordinary meeting of the shareholders in the Tokyo Chamber of Commerce on June 30 to obtain the shareholders' sanction for the renewal of the company's business terms and the plans for the settlement of the problems attending the extension of the business term, Baron Rempei Kondo, the president of the company, presiding.

The proposals introduced by the chairman consisted in the extension of the business term by another 30 years; the doubling of the capital to \$21,912,000, allotting the new shares representing the augmented capital to the original shareholders at the rate of one new share to every old share, to be paid up by the company out of the bonuses recommended in the proposals as for shareholders; and the distribution to various items of \$13,618,206 out of the accumulated reserves to the extent of \$23,030,356, and the remainder to be retained in the company as reserve funds.

The most important part of the chairman's recommendations was the distribution of the surplus funds. In the first place \$4,233,000 was set aside for the repayment of the value of the fleet. In the second place, \$4,107,500 was recommended to be distributed to shareholders as bonuses, first in the shape of partially paid-up shares and then in the form of dividends at the rate of \$3.11½ per share. In the third place \$99,600 was set aside as bonuses for officers, \$49,800 as gifts to all persons interested in the concern, \$672,300 as bonuses for employees, and \$249,000 as allowances to seamen and others.

Every one of the chairman's recommendations was opposed by some sections of shareholders. The increase in capital was not countenanced by some persons, as they thought it to be unjustifiable in view of the fullness of the company's business preparations for every emergency apprehended. The chairman, however, contended that though no necessity was anticipated of calling up the payment of stock capital in the future, the opening of the Panama Canal or other services had to be thus provided for, and obtained the approval of the meeting.

Great objection was made to the last recommendation for the distribution of the surplus funds, but the dissatisfied shareholders were finally appeased. A point most significant and of vital interest raised during the debates was the remark by the board that the rate of dividends would be lowered to 8 per cent in the future as a result of the augmentation of the capital. Every one of the proposals was decided upon in the affirmative. The only alteration was the raising

¹ The Nippon Yusen Kaisha, whose paid-up capital has been 22,000,000 yen (\$10,956,000), is stated by the Japanese Government Yearbook for 1914 to have had a reserve fund of 37,007,313 yen (\$18,429,640). It is by far the largest of the Japanese shipping lines, its 82 vessels operating in 1913, according to these Government statistics, having a total of 346,017 gross tons out of a total of 785,190 gross tons for all Japanese steamship companies. Its receipts in United States currency for 1913 were: Earnings, \$13,394,811; miscellaneous, \$1,145,204; shipping bounties and subsidies, \$2,408,300. Expenditures were \$14,020,863. Net earnings were \$2,925,542. Amount brought forward from 1912 was \$405,234. Distribution for 1913 was as follows: Reserve, \$1,689,317; bonuses, \$78,261; dividend at 10 per cent, \$1,095,000; carried forward, \$472,696. Besides engaging in domestic trade (including Formosa and Karafuto services), the Nippon Yusen Kaisha runs regular services on the European, North American, Australian, Calcutta, Shanghai, Vladivostok, and North China lines. The financial returns of the company's operations for the 6 months ended Mar. 31, 1915, were given in COMMERCE REPORTS for July 31, 1915. Frequent references have also recently appeared in COMMERCE REPORTS as to its services to American ports.

of the rate of fund for depreciation in the value of the fleet to 5 per cent per annum instead of $2\frac{1}{2}$ per cent per annum as previously recommended.

BOHEMIAN HOP CROP.

[Consul Charles L. Hoover, Prague, Bohemia, Austria, Aug. 9.]

The Prager Tagblatt, in commenting on this season's hop crop, says in its issue of August 8:

We have had rather frequent rains during the last three weeks, and although each shower was of short duration the rainfall was sufficient to give new life to the plants and to stop their turning yellow. The rains, some of which were stormy, were in general, warm, and were, at any rate, not unfavorable to the further development of the blossoms. However, since last report, the condition of the hops has not changed. What was sun scorched remained yellow, and that which was strong and healthy remained so.

As we are just at the beginning of the harvest further change is not to be expected and therefore the crop may be estimated with reasonable certainty at about half that of 1914; that is to say, it will amount to something like 100,000 zentners [zentner=110.23 pounds] or perhaps a little more. The reduced beer production in this country and the impossibility of exporting to enemy and transoceanic countries make higher prices unlikely and the first quotations will probably be 80 to 100 crowns per zentner [14.7 to 18.4 cents per pound]. Practically all the 1914 Saaz hops have been sold, the small remainder being quoted at 80 to 95 crowns per zentner [14.7 to 17.4 cents per pound].

Suggested Use of Foreign Bags.

The same periodical makes the following comment regarding the situation as affected by the export embargo on hop sacks:

According to the export embargo on sacks which was published in the Reichsgesetzblatt of January 22, 1915, when hops are exported in domestic sacks a bond amounting to 3 crowns per kilo [27.6 cents per pound] of sack weight must be given, and when the reimportation of the sacks does not take place within three months this bond is forfeited. An exception is made only in the case of oversea trade, which, however, does not enter into the question at all owing to the present state of war. As the reimportation of the empty hop sacks within two months is impossible, owing to the fact that many brewers do not use their hops for months and that hops can not be resacked without danger of serious damage, this bond has the effect of an export duty. This will injure the hop industry all the more, as, owing to the cessation of the oversea export trade, only a modest fraction of the export in normal times can be placed in foreign markets this year. This market is much needed owing to the reduced domestic demand for hops on account of the limiting of the production of beer.

In this situation it would appear to be most advisable to facilitate the use of foreign hop sacks through simplifying the customs control. In this sense the Society of Hophandlers in Saaz, the Union of Hophandlers of Bohemia, and the Society of the Saaz Hop-producing Communities have presented a joint petition to the Ministry of Finance asking that the customs authorities at Saaz be empowered to mark such empty foreign sacks as arrive so that when the sacks are filled export certificates may be issued at once and the hops shipped without delay.

MORE SPINDLES FOR JAPANESE MILL.

[Consul R. Carleton Baker, Nagasaki, Aug. 12.]

It is reported in the local press that the Nagasaki spinning factory, which recently added 2,000 spindles to its plant, bringing the total up to 20,000, has decided to install 6,000 more and to increase its staff by 250 girls. The factory already gives employment to 850 females.

FOREIGN TARIFFS.**BRITISH INDIA.**

[Board of Trade Journal, Aug. 19, 1915.]

Restrictions on Cocaine Preparations.

Under the terms of the Sea Customs Act, 1878, the Governor General of India, in addition to prohibiting the importation by post of opium, cocaine, and certain other drugs and preparations thereof, restricted the further importation of such products to persons specially authorized or their agents. It has now been provided by a customs circular promulgated July 9, 1915, that the following medicinal preparations containing cocaine and other derivatives of the coca plant may be imported without restriction, except by post: Products containing not more than one-sixteenth grain of cocaine hydrochloride, or other derivative of the coca plant to each tablet, troche, pastille, lamella, or fluid dram, so intimately blended with other drugs as to make it impossible for such preparations to be used as a source of cocaine. The labels of such preparations must state the name of the manufacturer and the amount of cocaine hydrochloride or other derivative of the coca plant contained therein. While products falling within the above definition may not be imported by post, inland transportation by post will in the future be permitted. [For previous notices regarding the importation of prohibited preparations into British India see Foreign Tariff Notes No. 3, p. 90, and No. 15, p. 54.]

FRENCH COLONIES.

[Journal Officiel, Aug. 19, 1915.]

Authority to Suspend Import Duties.

A French law of August 14, 1915, ratified a decree of August 22, 1914, authorizing the Governors of French colonies to suspend the import and export duties applicable to foodstuffs and other articles of prime necessity at any time prior to the conclusion of the European War. Unless otherwise ordered, all import and export duties in force prior to August 22, 1914, are to be restored within six months after the signing of a treaty of peace.

REUNION.

[Journal Officiel, July 31, 1915.]

Tariff Changes.

A French presidential decree of July 23, 1915, provides that refined petroleum, schist, and other mineral illuminating oils, as well as essences of mineral oils, imported from foreign countries shall be dutiable at 10 francs per hectoliter instead of at 14 francs per 100 kilos. The same decree establishes the following new duties on sugar imported into Reunion, which was formerly subject to the rates prescribed by the French customs tariff (per 100 kilos, net weight): Raw sugar, the estimated yield in refined sugar being not more than 98 per cent, 5.50 francs; raw sugar, the estimated yield in refined sugar being more than 98 per cent, 6 francs; refined sugar, including candy sugar, 6 francs.

SIERRA LEONE.

[Board of Trade Journal, Aug. 19, 1915.]

Tariff Increase.

An order in council approved by the Legislative Council of Sierra Leone July 21, 1915, provides for considerable increases in the specific duties applicable to firearms, ammunition, wines, spirits, tobacco, oils, and lumber imported into the colony, and raises from 10 to 12½ per cent ad valorem the rate of duty imposed on articles not mentioned in the tariff. As very few products are specified in the customs tariff of Sierra Leone, the latter provision is practically equivalent to a general increase.

COGNAC BOTTLE FACTORY RESUMES OPERATION.

[Consul Kenneth Stuart Patton, La Rochelle, France, Aug. 12; supplementing report published June 30.]

The shortage of bottles in the brandy trade resulting from the unexpected closing of the bottle factory (Verrerie Boucher) at Cognac, France, in May, 1915, is about ended. The factory has decided to resume work early in September and in the meantime is disposing of its stock at 25 francs (\$4.83) per hundred. It is stated that this price will be maintained.

The cognac trade has not suffered much from the temporary closing of the factory as most of the firms had a sufficient supply on hand to tide them over until the reopening of the bottle works. Had the factory decided to close down for a longer period, the brandy trade would have been seriously affected.

SAMPLES OF PAPER.

The Bureau of Foreign and Domestic Commerce has a large number of catalogues and samples showing prices and grades of paper in use in various foreign countries. It is the intention of the Bureau to place these samples in its branch offices and in the offices of commercial organizations throughout the country, in order that American firms may have an opportunity to inspect them. These samples accompanied the consular reports which were published in the monograph entitled "Paper and stationary trade of the world." The Bureau will be very glad to hear from any American firms interested in examining these samples before the complete itinerary is prepared.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

A Fort Francis, Ontario, company has sold its entire stock of lumber, comprising over 9,000,000 feet, to a Minneapolis lumber company.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Haberdashery, No. 18277.—A firm in Africa informs an American consular officer that it desires to receive catalogues and full information relative to children's novelties, cotton yarn, fezzes, haberdashers' supplies, small scales, and wrapping paper. C. i. f. quotations are desired. Correspondence may be in English.

Surgical instruments, drugs, etc., No. 18278.—The commercial attaché of the Department of Commerce in Russia has forwarded the name and address of a business man in that country who is in the market for drugs and chemicals, thermometers, surgical instruments, etc.

Picture molding, No. 18279.—One of the commercial agents of the Bureau in South America transmits the name and address of a business man in Argentina who desires to correspond with American manufacturers and exporters of picture molding. Catalogues and full information should be sent at once. Cash will be paid against shipping documents in the foreign port. Bank reference is given.

Machine for making horseshoes, No. 18280.—The Bureau is in receipt of a request from a man in Russia intimating his desire to be placed in communication with American firms manufacturing stands for horseshoe making. He states that three rollers would be required to plate bars of iron $\frac{1}{2}$ inch by $\frac{1}{2}$ inch, 1 inch by $\frac{1}{2}$ inch, and $1\frac{1}{2}$ inches by $\frac{1}{2}$ inch. The rollers must plate hot burning bars of about 15 inches long before half-bending and may have any view.

Motor trucks, No. 18281.—A special agent of the Bureau in Central America writes relative to a possible opportunity for the sale of motor trucks for the transportation of coffee. He recommends the shipment to that country of such a truck in charge of a demonstrating mechanic. He states that arrangements can be made with the customs officials for the free entry of the truck for demonstration purposes.

Oxide of zinc, No. 18282.—A publishing firm in the United States informs the Bureau that a correspondent in Spain desires to purchase oxide of zinc for the manufacture of enamel.

Glass inkwells, No. 18283.—The commercial attaché of the Department of Commerce in Great Britain informs this Bureau that his office is in receipt of a request for the names of manufacturers of so-called clinker-glass inkwells.

General representation, No. 18284.—A commercial agent of this Bureau reports that a representative of a well-established dry-goods firm in Australasia is now visiting in this country and wishes to get in touch with leading manufacturers with a view of securing agencies for all classes of hosiery, underwear, flannelettes, shirtings, cotton suiting, cotton dress materials, fleeced cloths, denims, and dungarees (overalls and jumpers).

Lumber, agricultural machinery, etc., No. 18285.—A firm in Cypress wishes to correspond with American firms selling lumber, agricultural machinery, medicines, etc., for which they have actual orders. Quotations should be c. i. f. Cypress or Alexandria (Egypt), inclusive of 2 per cent commission. Payment cash against shipping documents through a bank in the United States. Bank references given.

Lubricating oils, waste, and printing supplies, No. 18286.—The commercial attaché of this Bureau in Chile reports that the State Railways have asked for bids for lubricating oils and waste, according to specifications of 1915, on file at the Bureau of Foreign and Domestic Commerce, Washington, D. C. The total weights requested in kilograms follow: Axle grease, 1,300,000; locomotive oils, 650,000; and packing and cleaning waste, 630,000. The bids will be opened October 12, 1915. Bids will also be opened by the State Railways on October 14, 1915, for a large variety of printing supplies, including paper of various weights, leather for binding, starch, glue, and ink. Bids should be made through a local agent.

SOUTH AFRICA'S IMPORTS FOR JULY.

[Vice Consul John W. Dye, Cape Town, Aug. 6.]

South Africa's imports for July, which aggregated \$15,266,668 in value, were \$619,476 in excess of those for the corresponding month of last year. Imports at Port Elizabeth, East London, and Durban showed gains, while receipts at Cape Town and through the port of Lourenco Marques, in Portuguese East Africa, fell below the figures for July, 1914. The respective values were: Cape Town, \$3,072,494 (against \$3,296,835 in July, 1914); Port Elizabeth, \$3,860,751 (against \$3,827,274); East London, \$1,567,023 (against \$1,271,919); Durban, \$5,295,720 (against \$4,230,571); Lourenco Marques, \$1,244,160 (against \$1,831,483); other ports and stations, \$226,520 (against \$189,110).

NEW AMERICAN-AUSTRALIAN CARGO SERVICE.

[Consul General J. I. Brittain, Sydney, New South Wales.]

The recent arrival of the *Colusa* inaugurated a new line of steamers between the United States and Sydney. Two other vessels belonging to W. R. Grace & Co. are to follow, and it is expected that these three will give a regular cargo service between Sydney and Atlantic ports, carrying as well a limited number of passengers. The *Colusa*, which is a vessel of 5,732 tons, has accommodations for 40 passengers.

Thirty-seven ships have arrived at Sydney since January 1, coming from various ports of the United States. The greater number were lumber schooners from the Pacific coast. It is said that more than 60 schooners have been chartered for Sydney and will arrive within the next few months.

CONSULAR TRADE CONFERENCES.

American Consul Cornelius Ferris, jr., stationed at Bluefields, Nicaragua, will make his headquarters at the branch office of the Bureau of Foreign and Domestic Commerce, room 752, Oliver Building, Boston, Mass., until September 20, where he will be glad to confer with American manufacturers and exporters desiring information relative to trade conditions and possible markets for American goods in Nicaragua and the River Plate region of South America.

COCONUT INDUSTRY OF BRITISH NORTH BORNEO.

[Vice Consul John Nimmo Wardrop, Sandakan, July 12.]

An interesting article on the cultivation of coconuts in Borneo recently appeared in one of the Singapore papers. It was written by a senior Government official, the Resident of the East Coast district, and can be taken as fairly reliable. After stating that more interest is now being manifested in the development of the coconut industry than ever before, and that it is becoming more and more difficult to acquire suitable land in the Malay Peninsula, the Resident continues:

"Ceylon already has a million acres of land under coconuts, while North Borneo, enjoying very similar climatic conditions and almost equally favorable labor facilities, can boast but a few thousand acres. The reason for this is mainly that North Borneo is away from the regular track, and investors are naturally drawn first to such countries as the Malay Peninsula and Ceylon, where conditions and results have been well proved. But the time is coming when they must go farther afield, and North Borneo lies ready at hand.

Steamer Services—Telegraphic Communication.

"I shall endeavor in the space of this article to answer satisfactorily such inquiries as would naturally be expected from one seeking land in the State of North Borneo. The country has an extensive coast line, indented at almost equidistant points by five excellent harbors, between which a double service of steamers maintains regular communication. The Chartered Co. has for some years very seriously applied itself to the problem of creating for its ports a trade that shall repay the capital expended on the various improvements which are continually being added. North Borneo is linked with Singapore, Hongkong, and the south Philippine Islands by British steamers affording conditions of travel closely approaching the luxurious. The Sabah Steamship Co., a local enterprise, has lately built and put on the run a very fine new steamer in addition to two smaller steamers that for many years have been of the greatest value to the country.

"In the matter of telegraphic communication, as long ago as 1906 the Chartered Co. realized that an overhead wire through dense jungle could never be relied upon as a faultless system. Four wireless installations have now replaced the old line. Such is the reply to the first inquiry to be expected as to how one may get to Borneo, and whether one is cut off from the world when there.

Development of the Territory.

"Next to its railway, which brings the magnificent valley of the Padas River into direct touch with the West Coast port of Jesselton, the Chartered Co. has expended most of its energies in endeavoring to discover what its territory [see Supplement 59a to **COMMERCE REPORTS** for June 15, 1915] contains and what form of development is most likely to prove successful. That agriculture is the line of advance there can be no question. Borneo rubber estates have done wonders and compare for growth and condition very favorably with other countries. We are not likely to see any extension of this industry, but we have up our sleeve perhaps some of the finest coconut land

in the world. This may sound like an exaggeration, but it is a fact which will bear the closest investigation.

"So far, with two important exceptions, coconut lands are held by private persons. Many Asiatics have acquired considerable wealth from their coconut gardens, but European enterprise has been backward. There are, however, two good examples in the Lahad Datu Culture Co.'s estate of 1,400 acres in Darvel Bay and the Merguan estate in the vicinity of Sandakan. At Sandakan, Kudat, Lahad Datu, and Tawao the areas under cultivation increase steadily from year to year.

Acquisition of Plantation Sites.

"Agricultural land can be obtained by direct communication to the Governor in North Borneo or, in the case of large areas, to the Court of Directors in London. Recent legislation has decreed that no State lands shall, as formerly, be acquired by purchase and that land will be alienated only on payment of an annual quit rent. A premium may or may not be demanded; in the case of coconuts especially easy terms may be obtained. In no case does the quit rent on coconut land exceed \$1.39 United States gold per acre, and a greatly reduced rental can be obtained during the first five years of development. The surveying of lands and the preparation of titles are undertaken by the Survey and Land departments, while the direct supervision of lands is relegated to the Collectors of Land Revenue in their respective districts.

"The applicant is left practically a free hand in the selection of his land, subject to such reservations as native or communal rights and restriction of frontage on river banks, roads, and railways. Once the land has been selected and a temporary occupation license issued, the planter may go ahead and fell the jungle. When he has satisfactorily completed his business with the Land Office the planter will have to deal with the Protectorate, which takes the place of the Labor Department in the Malay States, and the Medical Department.

Labor Plentiful—Sanitary Supervision.

"No difficulty need be anticipated in the matter of obtaining labor. There are Hongkong, Java, and Singapore on which to draw, and sufficient reputable agencies exist in the various centers through which a labor force can be collected at reasonable expense. Labor troubles are a rarity, and estates receive frequent visits from district officers who exercise the powers of assistant protectors.

"The medical department supervises the sanitary conditions of estates. Plans for coolie lines, bungalows, water supply, and kindred matters are submitted to the principal medical officer for approval. The regulations on both these subjects very closely resemble those in existence in the Malay States and can by no means be considered irksome.

Coconut Areas—Capital Needed.

"The prospective coconut planter has a rich and almost inexhaustible extent of land from which to make his selection, and he would be best guided by his own judgment after spending some time in looking around. There is no necessity to go far afield; in Darvel

Bay and Sibuco Bay on the East Coast, in particular, available land lies close to the ports of Lahad Datu and Tawao. From Sandakan also new lands will shortly be rendered available by the construction of the first five miles of a road destined eventually to reach the heart of the country. In any case the coast line everywhere is cut into by tidal rivers navigable by steam launch, and many estates have been opened on the banks of such rivers. Care should be taken on the East Coast to avoid rivers exposed to the northeast monsoon.

"The capitalization of a coconut estate will be no higher than in Ceylon or the Malay States. The average cost of bringing a tree into bearing should not exceed \$0.83 United States gold, and in one case, where the trees are bearing nuts at the beginning of the fifth year at Gawa Gawa in Darvel Bay, the cost was considerably less than that sum. Fencing is everywhere a necessity, but a strong timber fence made from trees felled on the estate does not add seriously to the cost of opening. Seedlings are not obtainable in very large quantities yet, and would probably, in the case of a large estate, have to be imported. The local price is about \$7.78 gold per hundred, but as much as \$11 is paid for the best qualities.

"The State collects an export duty of 2½ per cent on the value of copra exported, but beyond that and the rent no further taxation exists at present with the exception of import dues on various commodities."

STRIKING INCREASE IN MAZATLAN EXPORTS.

[Consul William E. Alger, Mazatlan, Sinaloa, Mexico, Aug. 14.]

It is of interest to note that, with the exception of one year, disturbed conditions in Mexico have had little harmful effect on the exports from the Mazatlan district to the United States, and in the current year a substantial increase in the declared value of such shipments is presaged.

During 1909 the total declared value of the merchandise invoiced at the Mazatlan consulate for shipment to the United States was \$3,512,211; in 1910, the declared values totaled \$3,719,750; in 1911, \$3,578,025; in 1912, \$4,611,448; in 1913, \$3,758,010; and in 1914 (the exceptional year referred to, during the first seven months of which the port was closed), \$1,142,505. From January 1 to July 31 of the present year the invoices certified at this consulate have had an aggregate value of \$3,623,271, to which sum should be added about \$1,000,000 shipped from Los Mochis agency.

The declared exports from the Mazatlan district to the United States for the complete year 1915 will probably total \$6,000,000.

NEW MATCH FACTORY IN MANCHURIA.

[Consul General P. S. Helntzleman, Mukden, Aug. 5.]

The Kirin Match Co. (Japanese) is to establish a branch factory at Changchun. The consent of the Japanese consulate in that city has been obtained and orders for the necessary machinery have been placed.

As there already exists at Changchun the Changchun Match Co. (capitalized at \$150,000) some opposition was made, but it was overcome. The Kirin mill has a capital of \$22,500, of which sum \$10,000 was subscribed by the Kirin Trading Co.

LATIN-AMERICAN MARKETS FOR BIT SAWS.**ARGENTINA.¹**

[Consul General L. J. Keena, Buenos Aires, Argentina.]

According to the 1910 census there were 283 sawmills in the Argentine Republic, which employed a total of 8,081 persons. The value of local material used was \$4,923,500.

The timber cut is quebracho. Chiseled-bit or inserted-tooth circular saws are the only saws that will successfully cut quebracho without overheating.

The imports of all machine saws for 1912 were 233,038 pounds. The principal countries of supply were: France, 82,507 pounds; Great Britain, 52,274 pounds; Germany, 50,899 pounds; United States, 44,100 pounds. In 1913 the total imports were 244,523 pounds, and in the first six months of 1914 they were 85,608 pounds.

The exports of quebracho logs in 1912 were 279,342 tons, with the following principal countries of destination: British Empire, 216,541 tons; United States, 19,922 tons; Germany, 10,841 tons. In 1913 the exports were 383,964 tons, and in the first six months of 1914 they were 201,675 tons. No other timber, lumber, or log is exported.

Sources of Supply—Prices—Depression in Quebracho Logging Industry.

The principal sources of supply of inserted-tooth circular saws are France, England, Italy, and the United States. Local selling prices on the sizes most in use are:

Diameter.	Price.	Diameter.	Price.
20 inches	\$25.00	44 inches	\$76.80
30 inches	43.25	54 inches	139.20
32 inches	43.25	60 inches	192.00
36 inches	52.80	68 inches	249.60
40 inches	62.40		

Inserted teeth are sold for \$4.50 per hundred.

The depression in the quebracho logging industry caused by the cutting off of the general European market has caused a very serious crisis in this industry. Until a new market is found for quebracho logs there will be little chance to introduce sawmill material of any sort into this country. For the past two years the quebracho logging industry (which is the only timber industry of Argentina) has been in a depressed condition, owing to the oversupply of the general market for this commodity.

[Consul William Dawson, Jr., Rosario, Argentina.]

Bit Saws Well Introduced—Give Best Results With Hard Timber.

Inserted or chiseled bit saws, called here "sierras con dientes postizos," are already well introduced in this district, especially in the Provinces of Santa Fe, Sanitago del Estero, and parts of Cordoba, where hardwood—quebracho—is cut. The so-called "obrajes," which prepare quebracho ties, posts, etc., use inserted saws almost exclusively, as they are found to give the best results with very hard timber. Small Rosario sawmills, of which a considerable number

¹ With respect to the prices quoted in the reports in this series from Buenos Aires and Rosario, Argentina, it should be noted that these two reports were written in the fall of 1914, and that possible variations in prices since that time are therefore not taken into account. The publication of the series was delayed, awaiting the receipt of certain of the reports, which were written in midsummer of the present year.

prepare pine and other soft lumber for the ultimate consumer, as well as sawmills in the Province of Tucuman and other parts of the district, where cedar, walnut, and similar timber is worked, use chiefly band saws. For such purposes the band saw is preferred on account of the finer cut and consequent reduction in waste. Judging from statements made by dealers and users, it does not appear likely that the market for inserted saws will increase outside of the quebracho industry.

The demand for such saws in quebracho "obrajes" will depend largely on railway development. The use of quebracho ties is compulsory on all new constructions. There is, of course, a vast field for railway extension in Argentina, especially in the southern territories. New lines and plans for the completion of existing nets are, however, confronted with the difficulty of securing capital. The closing of the German market for quebracho logs also affects unfavorably the exploitation of the "obrajes" and consequently the demand for inserted saws.

Number Sold by Dealers—Saws from United States.

Bit saws are handled by 8 or 10 firms at Rosario, although most of the business is in the hands of three large concerns with main offices at Buenos Aires and branches in this city. The principal importing house, which makes a specialty of sawmill supplies, estimates that in its Rosario and Buenos Aires stores together it sells, under normal conditions, about 400 inserted saws a year. It appears safe to say that more than 1,000 such saws are sold annually to mills in this district. Importers handling saws carry a stock of supply parts, teeth, adjusters, and wrenches.

Inserted saws come chiefly from the United States. One of the leading dealers states that he has tried English bit saws, but found them higher in price and less satisfactory than the American, which he now handles exclusively.

Prices Quoted by Importers.

The prices given below are quoted by two of the leading dealers. These prices cover all the sizes imported by these firms. The first importer sells Joshua Oldham & Sons saws at the following prices:

Sizes (B. & S.).	Number of teeth.	Price.	Sizes (B. & S.).	Number of teeth.	Price.
8.....	22	\$43.43	7.....	36	\$77.20
8.....	28	53.08	7.....	38	91.68
8.....	30	57.90	6.....	44	130.93
8.....	32	62.73	6.....	48	153.00
8.....	34	67.55			

With each saw two sets of replace teeth, three adjusters ("ajustadores-medias lunas"), and a wrench or key ("llave") are furnished. Replace teeth are sold at \$4.34 per hundred, adjusters at \$0.48 each, and wrenches at \$1.45 each.

The second firm sells Henry Disston & Co. saws at the following prices:

Diameter.	Price.	Diameter.	Price.
24 inches.....	\$31.85	40 inches.....	\$66.50
28 inches.....	38.60	44 inches.....	82.08
32 inches.....	45.36	48 inches.....	98.80
36 inches.....	55.97		

This firm delivers with each saw 10 sets of teeth, 1 wrench, and 4 adjusters without extra charge. Replace parts cost: Teeth, \$0.0386 each; adjusters, \$0.338 each; wrenches, \$1.45 each.

Both these firms handle American inserted saws only.

[A list of firms handling, or likely to handle, inserted saws at Rosario accompanied this report and may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 51075.]

BRAZIL.

[Consul Robert Frazer, jr., Bahia, Brazil, June 4.]

Bit saws, by which is understood saws with removable teeth, are not known here, and mill owners say they have never been tried. The latter seemed to doubt whether they would cut the excessively hard woods so plentiful in this country and appeared to have little inclination to experiment with them on their own account. A small trade might be worked up if saw makers sent some here for trial and they proved successful with the native woods, but unless this or some other means were taken to demonstrate their effectiveness it is feared that difficulty would be found in introducing them.

Types of Saws Now in Use.

The saws now used in the two large local mills are of three types—circular, band, and gang saws—and come almost exclusively from Germany and France, where owners say that high-grade blades may be purchased cheaper than in the United States or Great Britain.

The sizes of circular saws range from 8 to 32 inches in diameter, medium sizes being most used. Gang saws with from two to eight blades working vertically are the favorite type. Only a few heavy band saws have been seen in operation.

An astonishing variation in the sizes and shapes of the teeth in different saws was noted, there being dozens of different types used to suit the many kinds of Brazilian woods.

Mill owners spoke of the great importance of securing just the proper point of hardness in saw steel, stating that if too hard it becomes too brittle for use in working the iron-like woods to be sawn, while if too soft the teeth rapidly dull and wear down. The writer was shown one saw of which the teeth had been half rubbed off.

Both mills here imported their own tool steel for plane blades, etc., from Germany before the war, buying it, this office is informed, at the rate of 18 marks per kilo (\$1.95 per pound) c. i. f. Bahia. This price, of course, did not include the customs duty.

Sawmill Machinery is German.

As stated in a report on the Bahia lumber trade, published in **COMMERCE REPORTS** for February 6, 1915, all the machinery in both the mills referred to, except engines and boilers, is German. It was bought through a large German importing firm, which contracted for the complete installation of all the machinery on terms of one-third payment upon its arrival at Bahia, one-third upon erection, and one-third 30 days after the machinery had been working to the satisfaction of the owner.

[The names of the sawmills referred to and of hardware dealers in a position to import saws were transmitted with this report, and may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 62544.]

MEXICO.

[Consul William W. Canada, Vera Cruz, Mexico.]

Inserted or chiseled bit saws are well known in this consular district in those trades in which they are found to have marked advantages over other instruments for cutting. The bit saws most generally used are those of the bucksaw and hacksaw variety, but all kinds are frequently seen. As Mexico has come more and more into touch with the European countries and the United States, the use of these saws has rapidly become common even with the lowest classes, and they have quickly supplanted more primitive tools. Nevertheless, for rougher work axes and hatches still find a place in cases where saws are preferred in the United States. In fact, this remains a common practice in the cutting of the harder woods, such as ebony, for shipping to other parts of the Republic and abroad. The quebracho used in the Republic and shipped abroad comes from farther south, outside of this consular district, though some grows in this region.

Bit saws are sold in all the hardware stores in the towns and cities, and can sometimes be obtained even in the village general stores. The supply parts also are kept in stock. In the case of bucksaws, however, the carpenters do not, as a rule, buy frames, preferring to make their own in their shops or homes.

Necessity of Creating Wider Interest—Influence of Exchange Rates.

In trying to work up a market for bit saws it will be found that it is not a case of introducing a new article but rather one of creating a wider interest among the people and of supplanting saws of European manufacture by others of American origin. On account of the European war the latter task should not be as difficult as formerly, but the arousing of a more extensive interest will encounter numerous obstacles. It is often hard to get into touch with possible buyers in the inland cities through agents, catalogues, or letters. In addition the building industry, although not greatly affected in the port of Vera Cruz itself, is depressed elsewhere, along with other trades in which saws are needed.

The international money exchange rates, becoming more and more unfavorable to Mexico, are proving another adverse factor tending to prevent the sales of bit saws, since the prices in Mexican money must adjust themselves to the fluctuations, and seem unreasonably high to the Mexican carpenters and other users, whose incomes remain about the same. Indeed, the prices, although quoted in Mexican money, are in every instance based on the currency of the country of origin or of the United States, and at this time are being kept so low that the profit is not as great as it was in the past. Nowadays the local dealers, when asked the price of a saw in the morning, give a warning that it may be different before nightfall.

United States and Germany Have Controlled Market.

The United States and Germany have been supplying practically all of the demand for bit saws. The proximity to Mexico has aided the United States in its trade, and the existence of German hardware houses in this Republic has proved of advantage to Germany. In addition to supplying the demand of their nationals and advertising

their wares by catalogues and correspondence, manufacturers in these two countries have developed their trade by sending traveling representatives at frequent intervals. In the past such salesmen, always capable men, have, as a rule, represented several manufacturers of saws at the same time or some exporting firm handling the wares of several producers. In times of peace they have rarely failed to obtain excellent results.

[Consul Herman L. Spahr, Montevideo, Uruguay, June 22.]

The United States, England, and France supply the lumber saws widely used in Uruguay. The kinds in use are band, solid circular, and inserted and chisel-tooth saws. The inserted-tooth circular saws vary in diameter from 20 to 58 inches, the most used being the 35, 40, and 58 inch; 7 and 9 are the popular gauges, though they range from 6 to 10. Stocks of saws and supply parts are carried by various firms in Montevideo and doubtless also in Paysandu and Salto, where the lumber business is important. Several makes are known, one of the leaders being the Disston saw, made in Philadelphia. The Atkins, of Indianapolis, and the saws of Spear & Jackson, England, and Panhard & Levasseur, France, are among the others. American saws, it is said, have been well introduced and in the case of inserted-tooth saws are preferred.

Woods Used in Uruguay—Kinds of Saws Employed to Cut Them.

The soft woods imported into this country consist mainly of Southern yellow pine, white pine from Canada and California, Swedish white pine, spruce grown in the Appalachian Mountain districts and in Canada, Austrian or Bosnian spruce, and Parana pine (known here as Brazil pine). Band saws are much used for resawing soft woods, but the solid steel circular saw is generally employed for cutting off, ripping, and bolting. This latter saw is used in towns and cities to resaw and rip coniferous woods and to work South American cedar, generally known as Spanish or cigar-box cedar, and álamo, which belongs to the poplar family and is related to the cottonwood and aspen of the United States.

Hardwoods from Argentina, Paraguay, and southern Brazil are manufactured into lumber, boards, planks, and rough forest products—billets, ties, bolts, posts, etc.—usually by means of band saws in cities and ports and by inserted chisel-tooth saws in the interior and rural districts. Uruguay has a comparatively limited stand of timber. The wood cutting is much more extensive in Paraguay and the northern part of Argentina. Lumber logs are first slabbed by the natives, who wield the axes with consummate skill. The principal tropical hardwoods handled are lapacho, urunday, curupay, peterby, palo blanco, quebracho colorado (*Quebrachio lorentzii*), quebracho blanco (*Aspidosperma*), and algarroba; and although they are extremely hard the natives square the trunks quickly and efficiently.

The Cutting of Posts, Poles, Ties, and Pickets.

The square logs vary in size from 12 to 36 inches face width, and it is said that about 14,000,000 feet b. m. annually come to the cities of Uruguay for manufacture, principally on band mills. The trees

of smaller diameter are cut for posts, telegraph and telephone poles, crossties, and fence pickets, and, from quebracho, bolts for making tanning extract. This is the chief part of the lumber industry, largely confined to interior sections near forests with convenient rail and water transportation. In these operations a circular saw with the inserted chisel tooth is nearly always used. Crossties produced in and exported from Uruguay and neighboring countries are usually sawed ties and seldom hewn sleepers. Poles are rounded, being barked and smoothed with the ax before shipment. Fence posts are generally round, but large quantities are squared by circular saws.

The wood most used for ties, poles, and posts is red quebracho, which also yields the tanning extract. Exported ties are nearly always of this wood, but for locally used ties lapacho, vira pita, and curupay are also common. In hardness and density these approach quebracho and are nearly as difficult to manufacture. They are largely used for pickets, which form an important product of the circular mill. Much of the fencing in the rural districts is of galvanized wire, supported between posts by wooden pickets.

LIME-JUICE FACTORIES IN WEST INDIES.

[Supplementing reviews in Consular and Trade Reports for June 13, 1913, and Apr. 8, 1914.]

A Government lime-juice factory is operated on the British West India island of St. Lucia. It is conducted on a cooperative basis. The administrator of the island states that the object the Government had in view in establishing the factory was to obtain for the small proprietors as good a price as possible for the produce of their lime cultivation, and to encourage them in extending the cultivation. The advantage of the factory's price of 5s. 8½d. (\$1.39) per barrel of ripe limes over the prevailing local price of 2s. (24 cents) immediately prior to the factory coming into operation is believed to have already induced peasant proprietors to plant more lime trees.

During last year two private factories for the concentration of lime-juice in steam-heated evaporators were established and two others are in source of erection. There will then be seven such factories in the island, and similar works are likely to be established in the near future, as the lime plantations approach maturity.

During 1913 there were exported from St. Lucia 7,968 gallons of lime-juice, valued at \$12,118; 158 gallons of essential oil of limes, valued at \$1,635; and \$1,367 of green limes.

The governor of the Leeward Islands, in his report just issued in London, states that the lime crop of Dominica increased from 284,000 barrels in 1909 to 391,000 barrels in 1913. The flour barrel which is generally used for measuring limes varies slightly in size, but the average capacity may be placed at 4.55 cubic feet. When filled to the top with limes the weight of the contents is approximately 160 pounds. Calculated on this basis the weight of the crop gathered during 1913 was 31,000 metric tons.

During the year the secretary of the Canadian and West Indian League drew attention to a report issued by the chief Government analyst, Ottawa, dealing with the adulteration of lime juice in Canada. The report states:

Out of 30 samples analyzed only 5 fully met the requirements of the standard set by law. Although several others approximate more or less closely to it, the report shows that no less than 15 were adulterated according to the act, while quite 30 per cent, as the Government analyst points out, bore unmistakable evidence of having been reduced by the addition of water.

The standard fixed by the Government for lime juice is that it shall contain at least 10 per cent of solids and 7 per cent of citric acid. Of the 15 samples declared as adulterated the report shows that 10 contained less than 6 per cent of citric acid, while three contained as little as 4.55, 3.78, and 3.50 per cent, or little more than one-half of the legal proportion. In the quantity of solids, of the same 15 samples analyzed no less than 11 contained less than 7 per cent, while one of these had only 5.1 of solids, and one actually had only 3.6, or about one-third of the population prescribed by law. One of the samples, which on analysis proved to contain only 3.50 of citric acid, showed unmistakable signs of dye having been added to give the article sold the color of lime juice.

In justice to the British West Indies it may well be added that whatever adulteration occurs does not take place there, but in the countries where the article is prepared.

Dominica's exports of lime products and their value during 1913 were as follows:

Product.	Quantity.	Value.
Concentrated lime juice.....	gallons.. 158,974	\$296,068
Raw lime juice.....	do. 336,728	73,401
Raw juice cordial.....	do. 4,654	1,698
Green limes.....	barrels.. 43,832	191,244
Pickled limes.....	do. 616	1,124
Citrate of lime.....	pounds.. 522,336	82,857
Essential oil of limes.....	gallons.. 5,370	17,641
Otto of limes.....	do. 1,505	30,211

The increases in value over the Dominica crop of 1912 amounted to \$223,805.

The lime industry in Montserrat continued to suffer during the year from attacks of pests and diseases. These have continued to form the subject of investigations by the Agricultural Department, and a considerable series of spraying trials were laid out in this connection. The exports of limes and lime products from Montserrat for 1913 were valued at \$28,790.

In Antigua interest in lime cultivation as a minor industry under suitable conditions continues to be sustained. A moderate area has now been planted up in the crop. The demand for plants fell off somewhat during the year in consequence of planters' requirements having been filled to a considerable extent. Young plantations suffered somewhat severely from dry weather during the year. Exports of limes and lime products from Antigua were valued at \$7,360. The cultivation of limes continues to attract a certain amount of attention in Nevis, while in Tortola, Virgin Islands, the small peasant lime-growing industry has made some little advance.

The United States derives most of its imports of limes and lime products from the British West Indies, the amounts for the past two fiscal years ended June 30 having been as follows:

Classification.	1914	1915
Limes.....	\$187,530	\$161,567
Lime, lemon, and sour orange juice containing not more than 2 per cent alcohol.....	110,840	139,605
Oil of limes.....	23,828	9,279
Citrate of lime.....	410,567	1,109,029

FOREIGN TARIFFS.

ARGENTINA.

[Boletín Oficial, July 13, 1915.]

Clearance Without Shipping Documents.

In view of frequent delays in the receipt by the consignee of bills of lading for goods imported into Argentina from European countries, the provision of article 929 of the Argentine customs regulations, prescribing a fine of 2 per cent of the invoice value if articles are not cleared through the customs within 8 days, has been modified. In the case of goods shipped to a named consignee, articles may now be cleared without the presentation of bills of lading on the sole responsibility of the consignee, provided he is of acknowledged standing in the community. If the time allowed for clearance expires before the arrival of the shipping papers, the Secretary of Customs will agree, at the request of the interested parties, to open the envelope containing the documents as soon as received, the date of its presentation to him to be compared with the date of receipt indicated by the postmark. In the case of shipments "to order" not cleared within the prescribed 8 days, the fine will not be imposed when the interested parties allow the Secretary of Customs to open the envelope containing the bills of lading, as above stated, or when they submit to the customs authorities, within 8 days from the date indicated by the postmark, the envelope in which the bill of lading arrived made out "to order" and addressed to a bank.

AUSTRALIA.

[Board of Trade Journal, Aug. 26, 1915.]

Continuance of Present Duties.

It is stated by the Trade Commissioner of Australia that the proposed consideration of a new customs tariff by the Australian parliament has been indefinitely postponed. The rates of duty prescribed by the law provisionally enacted December 3, 1914, which provided for increases on a large number of articles, will therefore remain in effect for an indefinite period. [For previous notices regarding the new tariff rates in Australia, see Foreign Tariff Notes No. 15, p. 39, and COMMERCE REPORTS, July 14, 1915.]

BRAZIL.

[Consul General A. L. M. Gottschalk, Rio de Janeiro, Aug. 9, 1915.]

Preparation of Invoices.

In accordance with the provisions of a customs order of July 22, 1915, importers of wines, oils, canned goods, and similar products must in the future declare the weight per package, if the goods are in packages of uniform size, or, if the size of the parcels varies, the weight of each individual package. As Brazilian importers will not be permitted to clear their goods through the customs in the absence of such information, shippers in this country should carefully observe this requirement in preparing invoices for consignments to Brazil.

CHILE.

[Board of Trade Journal, Aug. 26, 1915.]

Invoices for Certain Parcel-Post Shipments.

According to the provisions of the new Chilean consular law (article 19), invoices for goods sent by post to Chile must be viséed by the Chilean consul in the place of mailing if the value of the shipment exceeds \$25. Under former regulations no consular invoice was required in the case of shipments by parcel post, whatever the value of the goods.

SALVADOR.

[Consul General Henry F. Tennant, San Salvador, Aug. 14, 1915.]

Registration of Pharmaceutical Products.

The new customs tariff recently enacted in Salvador, which is to go into effect January 1, 1916, prescribes, under tariff number 93, a rate of \$0.40 (United States currency) per kilo for various pharmaceutical products, including preparations of known formula not specified in the tariff, while a rate of \$1 per kilo is imposed on preparations of secret formula (tariff number 94). A large number of products to which the lower rate is made applicable have been specified in a Salvadorian decree of August 12, 1915, which stated that all preparations not mentioned therein were to be subject to the higher duty. It is understood, however, that additions will be made to the foregoing list in the case of products considered by the Salvadorian officials to be meritorious. American exporters of proprietary medicines, etc., should therefore make early application to the Minister of Finance of Salvador for the classification of their products under tariff number 93, submitting with their requests a formula of the preparation. [The decree in question is on file in the Bureau of Foreign and Domestic Commerce.]

CANADA TO CONSERVE WHEAT SCREENINGS.

[Consul General Frederick M. Ryder, Winnipeg, Manitoba, Aug. 31.]

In former years about 25,000 tons of wheat screenings were shipped from Manitoba Province to the terminal elevators at Fort William and Port Arthur for shipment, principally to the United States. Purchases are made from the farmers or country shippers who have received warehouse receipts against their dockage of wheat. These screenings are graded into two classes; No. 1 is known as "scalpings" and No. 2 as "rough screenings." The better grade is used in a mixture of chicken feed and the poorer is manufactured into a prepared stock food. The Board of Grain Commissioners have ordered that "scalpings" must not contain over 25 per cent of commercial grain; if richer than that it must be graded and docked for the dirt contained therein. There is a movement for retaining this product in Canada and utilizing it for feeding purposes. "Rough screenings" are what remain after everything of a higher value has been removed, and consist practically of straw, chaff, and other refuse, in addition to the smaller and lighter weed seeds, with a small percentage of finely broken commercial grain.

THE VEGETABLE WOOL OF ECUADOR.

[Consul General Frederic W. Goding, Guayaquil, Aug. 6.]

Kapok, known in Ecuador as "lana de ceiba," or "vegetable wool," is a product of the largest tree that grows in the forests of the littoral, a species of the genus *Eriodendron* (allied to the cotton plant). The ceiba bears most of its branches near the top, and the appearance of its bright-yellow flowers marks the approaching end of the rainless season. After the flowers fade the pods that yield the kapok of commerce are formed; these are gathered and the fiber extracted by hand. Too early rains interfere with pollination, resulting in many empty pods, when the natives refuse to devote much time in gathering the crop.

The tree may be grown in Ecuador up to an altitude of 5,000 feet above sea level, the growth the first year being about 25 feet. When 2 years old, on an average it will produce 100 to 200 pods, which contain 1 to 2 pounds of kapok; at 5 years, 200 to 300 pods, with 2 to 3 pounds; at 6 years, 300 to 400 pods, with 3 to 4 pounds; at 10 years, 800 to 1,200 pods, with 10 to 20 pounds. Two hundred pounds of kapok were obtained from one old tree. However, the tree is not cultivated in this country.

Fiber and Seeds—Exports—Silk Flower.

One hundred pounds of crude material yield, after cleaning, 45 pounds of first-grade kapok, 20 pounds of second-grade, and 35 pounds of seed. The seeds must be carefully separated from the fiber, as the presence of oil in them (about 25 per cent) will produce a stain which renders it unfit for use. The machine employed resembles a cotton gin, and does no injury to the fibers or seeds. To be marketable, the fibers must be long and bright, free from seeds and other débris, and not too tightly packed in bales of about 100 pounds.

There were exported from Ecuador 162,341 pounds of kapok in 1914, 129,226 pounds in 1913, and 135,719 pounds in 1912. Of the seeds Liverpool received 29,566 pounds in 1914, 84,531 pounds in 1913, and 188,744 pounds in 1912 for their oil. (After the oil has been extracted the residue is pressed into cakes for cattle feed.) First-grade kapok sold in 1913 and 1914 for 12 cents per pound and second-grade for 4.5 cents f. o. b. Guayaquil, all of the latter being shipped to Peru and Chile. The seeds sold for 88 cents per 100 pounds net.

In similar tracts of country there exists another but much smaller plant called "flor de seda," or silk flower, also a rapid grower. The product resembles kapok, but is much superior in all textile qualities, as it is finer and more brilliant. It is locally used in the manufacture of mattresses, not being separated in the local market from kapok. Silk flower has great future commercial and industrial possibilities, and would well repay scientific investigation and experiment.

[The increasing utilization of kapok, and particularly its growing importance in the trade of the Far East, have been discussed from time to time in COMMERCE REPORTS; see, among others, the issues for Apr. 1, June 8, and Aug. 29, 1914.]

AMERICAN IMPORTS OF KAPOK.

Kapok is gaining in popularity in the United States, where, among the other uses to which it is put, it is employed in stuffing mattresses

and sofa cushions, and, it is said, has found some favor among makers of upholstery fabrics. Save in 1914 imports of the fiber have steadily risen for the last half decade, amounting in the fiscal year 1911 to 2,070 tons; in 1912 to 2,099 tons; 1913, 2,842 tons; 1914, 1,827 tons; and 1915, 3,860 tons. However, because of a lower average price per ton, the value of the imports in 1915 was less than in 1913.

The Dutch East Indies furnish the bulk of the kapok that finds its way to the United States, American official statistics showing the following imports from there and from the other leading countries of supply during the last five years:

Imported from—	1910-11	1911-12	1912-13	1913-14	1914-15
British India	\$2, 212	\$4, 555	\$10, 884	\$19, 079	\$2, 273
Ecuador	1, 972	19, 708	2, 313	26, 480	7, 107
Germany	10, 057	2, 791	2, 347
Netherlands	48, 053	40, 335	86, 119	53, 216	28, 023
Netherlands India	403, 169	492, 258	686, 862	338, 991	727, 625
All other	311	10, 407	22, 923	1, 006	2, 481
Total	465, 774	570, 084	809, 001	441, 109	767, 509

AN INGENIOUS FRUIT CONTAINER.

[Consul General Frederick M. Ryder, Winnipeg, Manitoba, Aug. 31.]

Realizing that the ordinary barrel is unsuitable for safe and convenient shipping of apples and pears, and that boxing is an expensive item in this connection, a partitioned barrel has been invented by a fruit man in British Columbia, patents for which have been applied for in Canada and the United States. The container is similar to an ordinary barrel, divided into two equal parts by two partitions so adjusted as to permit the barrel being sawed in two, thus making two half barrels. The advantages claimed for this patent container are that it can be made of cheap sawed lumber, shipped in the "knock-down state," and easily assembled at the packing house; the fruit can be shipped without wrapping, owing to the firmness imparted by the central partitions, the fruit is said to arrive in perfect condition, while the convenience afforded by sawing the barrel in two enable customers to purchase a half or a whole barrel containing two varieties of fruit.

CONSULAR ADVERTISING IN BURMA.

[Consul Maxwell K. Moorhead, Rangoon, Burma, Aug. 3.]

An inquiry regarding the opportunities for the sale in Burma of American corks, bottles, and stoppers was inserted in the "Trade Inquiry List," which this consulate publishes twice a month and distributes among possible buyers. In response to this inquiry a Rangoon firm requests to be supplied with catalogues, price lists, and terms.

[The address of the firm may be had from the Bureau of Foreign and Domestic Commerce; refer to file 65710. See also report from Consul Moorehead on this subject in COMMERCE REPORTS for June 2, 1915.]

The pulp and paper mills at Fort Francis, Ontario, are operating 24 hours each day, with a force of about 250 employees. The output is taken by western Canada daily newspapers.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Paper, No. 18287.—A firm in France is in the market for prepared (dressed) paper in bobbins soaked in blued tints or dull, thickness 45/48 grams per square meter, the paper to be of a cheap grade, and also in gloss (satin) rolls and reams. The writer advises that he has a customer who would buy 2,000 reams of ordinary English writing paper, size 41 by 53, flat thickness, 95 grams per square meter. Quote cheapest price c. l. f. Bordeaux, custom tax included. Samples of paper desired may be examined at the Bureau or its branch offices. (Refer to file No. 63.)

General representation, No. 18288.—A commercial agent of this Bureau reports that a capable young man from Brazil is in this country seeking to become a representative for some export house desiring to extend their trade to South America. He speaks French, Italian, Spanish, and Portuguese, and is familiar with the tariff laws and commercial interests of his country. References are given.

Automobile supplies, No. 18289.—A firm in Greece states that it is desirous of being placed in touch with representative American manufacturers for the purpose of purchasing automobile wrenches and clocks, pipe wrenches, oil cans, shock absorbers, magnetos, ball bearings, oil and grease, and jacks. Catalogues showing prices should be forwarded at once. References given.

Nickel packing rings, No. 18290.—A firm in the United States writes the Bureau that it is desirous of obtaining the names of manufacturers of nickel packing rings, varying in size from 88 to 300 millimeters inside diameter and from 96 to 312 outside diameter. Several hundred pieces are desired.

Watch crystals, No. 18291.—This Bureau is in receipt of a request from a firm stating that it is in the market for a large supply of watch crystals. It has formerly been purchasing 5,000 gross per month.

Wood pulp, No. 18292.—A special agent of this Bureau reports that a large and well-rated enterprise in Uruguay desires quotations and samples on wood pulp, and he has forwarded samples of the pulp desired. (Refer to file No. 739.) The agent also submits a similar request from a firm in Argentina.

Copper wire, tubes, bars, and sheet copper, No. 18293.—An American consul in Spain reports that a concern in his district desires to communicate with American manufacturers of copper wire, tubes, bars, and sheet copper. Prices and catalogues are requested at once. Correspondence should be in Spanish or French.

Paper bag, No. 18294.—A firm in Brazil informs an American consular officer that it is desirous of obtaining a certain paper bag manufactured in the United States which would take the place of jute bags used extensively in the handling of coffee and cereals for local and export trade. It is estimated that 2,000,000 bags could be disposed of per year and that this amount would be ultimately increased to more than 10,000,000, depending on price.

General representation, No. 18295.—An American consular officer in Venezuela reports that a business man in his district wishes to represent or travel in Venezuela, Haiti, and Santo Domingo for American firms. He speaks French, Spanish, and English, and has an extended acquaintance in these countries. He formerly represented European exporters.

Sausage casings, codfish, No. 18296.—An American consular officer in Spain transmits the name and address of a business man who wishes to act as agent for the sale of unsalted dried sausage casings, there being an immediate call for this commodity. He is also interested in the immediate importation of dried codfish and requires 100 bales of 50 kilos each. Prices should be given c. l. f. Spanish port, preferable in gold pesetas or francs, although quotations in dollars will be accepted.

Cotton twist, No. 18297.—A Norwegian retail dealer in ships' supplies informs an American consul that he desires to arrange definite terms at once with an American firm selling cotton twist. This waste product of cotton is used for cleaning purposes on ships. The twist generally comes in bales weighing about 250 kilos (551 pounds) each, and is sewn up in jute bags bound together with iron hoops. Correspondence may be in English.

ADVANCE IN PRICES OF BOHEMIAN PORCELAIN.

[Consul Wallace J. Young, Carlsbad, Austria, Aug. 17.]

With reference to my dispatch in *COMMERCE REPORTS* for August 23, 1915, on "Rise in China Prices Predicted," the members of the association have agreed to a flat 15 per cent increase in the price of porcelain for the domestic market, the increase being now effective. This, it is said, will make prices practically the same both for the foreign and domestic trade.

CANADIAN FIRE CHIEFS' ASSOCIATION.

[Consul O. Gaylord Marsh, detailed as Vice Consul at Ottawa, dated Aug. 28.]

The Provincial Fire Chiefs' Association of Ontario has just closed its annual convention at Ottawa. Some able addresses were delivered on modern methods of fire prevention and extinction and education of the general public as to precautionary measures. The Ottawa Fire Department, which has established a high reputation for its modern equipment and efficiency, gave some interesting and thrilling demonstrations in ladder drills, high diving, and fire extinction.

While the association was originally formed as a provincial organization, it has assumed a national importance and the convention was attended by representatives from all parts of the Dominion. By an almost unanimous vote it was decided to reorganize along national lines and to change the name to The Dominion Fire Chiefs' Association. The following officers were elected: President, Mr. John Graham, fire chief, Ottawa; secretary, Mr. James Armstrong, fire chief, Kingston, Ontario; and chairman of exhibits, Mr. James Corbett, fire chief of the Massey Harris Company, Toronto. The 1916 convention will be held at Windsor, Ontario, on a date to be announced later.

These annual conventions will offer an opportunity for American manufacturers of fire equipment to exhibit their products to a large gathering of expert firemen at a minimum cost. President Graham, in an address before the convention, expressed the belief that there would not be a manufacturer of fire apparatus in North America who would not make a display of his products at future conventions. Prospective exhibitors should address the Chairman of Exhibits, whose address appears above.

DEVASTATION BY LOCUSTS IN PALESTINE.

[Consul Otis A. Glazebrook, Jerusalem, Palestine, Asiatic Turkey, July 17.]

[EDITORIAL NOTE.—The destruction of the fruit and foliage of the orange and olive groves of Syria by swarms of locusts was briefly described in *COMMERCE REPORTS* for Aug. 19 and 21, 1915. It was manifest that destruction of all vegetation in northern Syria, at least, was complete, according to these short reports from Beirut and Haifa. A more detailed account of the invasion of locusts has now been received from Rev. Dr. Glazebrook, American consul at Jerusalem.]

The recent devastation by locusts in Palestine will have disastrous effect on the people of the country, whose sustenance is thus so largely destroyed. I have had to depend upon outside sources for some of the information, but the actual invasion, the result of the devastation, and the work of protection I have seen with my own eyes, and have aided in the latter by my personal assistance and advice. It is not an overdrawn metaphor to describe this inroad as an invasion. Truly, the onward march of the serried ranks of the devastating insects was "more terrible than an army with banners." As far as the eye could reach, the fields were covered by the locusts, and even the street in front of the American consulate had the appearance in the movement of the green and black mass of a flowing river.

Such locust invasions are not unusual phenomena in Palestine. The last general and destructive visitation of the locusts occurred in 1865. Since then they have reappeared at different times in smaller numbers and limited areas, the last of these being some 11 years ago, but undoubtedly the disaster caused by the present visitation is not only greater and more general, but more profoundly felt than any in the recollection of the present generation.

The Advance Swarms of Adults.

On February 28, 1915, the first swarms of adult locusts were seen in the bordering "Judean Wilderness," but it was not until the early part of March that they flew over and past Jerusalem. These adults did little damage, but being of the largest and most devouring species of all migratory locusts (*Schistocerca peregrina*), the same kind alluded to in that most graphic of all descriptions of such ravages—the prophecy of Joel—apprehensions were grave that the result would be most disastrous. These apprehensions have been fully realized.

As soon as the news of the locust invasion reached His Excellency, Djemal Pasha, Ottoman Minister of the Navy and commander of the Fourth Army, he vigorously grappled with the situation. He appointed a "Central Commission to fight the locusts" under the presidency of His Excellency, Midhat Bey, Governor of Jerusalem. The field which the commission was to cover were the Sandjak of Jerusalem and the Vilayets of Beirut and Damascus, and this commission was officially attached to the headquarters of the Fourth Army at Jerusalem. Dr. Aaron Aaronsohn, who is well known to the Department of Agriculture at Washington, was appointed High Commissioner for the above-mentioned Provinces. This appointment promised well, as the doctor is one of the most scientific men in Syria and director of the Jewish Agricultural Experiment Station of Palestine.

Measures Used to Combat the Invasion.

Under the direction of this commission an order was issued requiring every male residing in the cities from the ages of 15 to 60 years to collect 20 kilos (44 pounds) of locusts or to pay an exemption fee of one Turkish pound (\$4.40). This rule was so rigorously enforced—stores being closed if the owners could not show a receipt for eggs or cash—that about 800 persons paid the tax, while the others either gathered the required amount or purchased them from peasants who brought them in secretly for sale. In the village half of the inhabitants were compelled to go out each alternate day to dig for locust eggs.

Toward the end of May the larvæ, already about an inch long, made their first appearance near Jerusalem on the plain of Raphaim and aroused the people to the necessity for immediate organized resistance. The method of procedure was to form lines of men, women, and children along the roads separating the private gardens from the open fields beyond, flagging the locusts. Tin-lined boxes were sunk in the earth in the direction in which the locusts were advancing. The flaggers would drive them together in a dense column toward the trap where guards at each end would keep them from escaping. Sometimes the drives were so large that the ground in front of the boxes would become clogged when the locusts would have to be shoveled into the boxes to make room for those pressing from behind. To protect the trees from the young crawling locusts pieces of tin or zinc, in the shape of inverted funnels, were tightly placed around the trunks of the trees.

Ineffective Results—People Will Suffer.

In spite of all this fighting of the larvæ instances are very rare where the results were satisfactory. Few crops or orchards escaped devastation. This was especially true on the Plain of Sharon, where the Jewish and German colonies, with their beautiful orange gardens, vineyards, and orchards, suffered most severely. The only exception was the orange gardens in Jaffa proper, which, doubtless, owed their immunity to the sea breezes. In the lowlands there was a complete destruction of the summer crops such as garden vegetables, melons, apricots, and grapes, for all of which the plain between Jerusalem and Jaffa is renowned and upon whose supply the Jerusalem markets depend. The result is that there are few vegetables or fruits to be had in the markets, and such as appear command an almost prohibitive price.

In the mountain district, notably about Jerusalem and Hebron, the heaviest loss from the onslaught of the locusts has been in connection with the olive groves and vineyards. Olive oil is a staple of food among the peasants and poorer classes, taking the place of meat. The grape, too, is a similar staple among all classes. The loss of this crop will be most keenly felt. This year, especially on account of the almost entire absence of sugar, now selling, when obtainable, at a fabulous price, the grape crop was counted upon as a substitute from which "dibs," a kind of molasses, and divers kinds of jams are made without the use of sugar.

Natural Enemies Made Little Impression.

Strange to relate, storks, which were always looked upon as the most effective enemy of the locusts, this year seemed to have been

proportionately too few to have had a perceptible effect upon them. The common house sparrow and domestic fowls have doubtless devoured quantities of them, but here again the invading host was so tremendous that this natural help was not noticeable. During the digging for the locust eggs it was noticed that a species of fly, probably the bee fly of the family of Bombyliidæ, had infested many of the egg sacks and destroyed the contents. Mr. E. F. Beaumont, of Jerusalem, has sent a specimen of this fly to the Department of Agriculture at Washington for identification.

AMOY SEES ITS FIRST MOTOR VESSEL.

[Consul Lester Maynard, Amoy, China, July 15.]

On July 7 the motor vessel *Panama* reached Amoy with a consignment of kerosene for the local agents of a Texas oil company. The arrival of this vessel occasioned considerable interest, as it is the first motor vessel that ever visited this port.

The *Panama* was completed in March of this year, and is owned by the East Asiatic Co., of Copenhagen, Denmark. The vessel is 427 feet long, 55 feet beam, and 38½ feet depth, with a carrying capacity of 9,000 tons, and was built at a cost of \$400,000. It is equipped with two 1,750-horsepower Diesel engines, three auxiliary engines for lights, electrically driven winches, electrically driven steering gear, and an air compressor. Since, at a 12-knot speed, 11 tons of crude oil are consumed in 24 hours, the boat's fuel capacity of 1,180 tons of crude oil is sufficient to carry it 30,000 miles.

Advance in Freight Rates.

This vessel started from Port Arthur, Tex., on its initial voyage with a shipment of 230,000 cases of oil, the cases containing two tins of 5 gallons each. The freight on this oil is stated to have been about \$135,000 United States currency, which is one-third the cost of the vessel. The bulk of the shipment was discharged at Hongkong for distribution to Canton and interior points, and 50,000 cases were unloaded at Amoy.

Freight on oil from the United States to Amoy has greatly advanced since the outbreak of the European war, the former price of 21 cents United States currency per case having now advanced to 59 cents per case. With the large stocks on hand belonging to competing companies and the high freight rate which has been paid on this shipment it is difficult to understand how the market can absorb this large consignment without cutting prices to the losing point.

The *Panama* sailed from Amoy on July 12, without cargo, for Vladivostok.

Imports of Citrate of Lime.

The citrate of lime imports into the United States, statistics of which appeared in COMMERCE REPORTS for September 14, 1915, come mainly from the island of Sicily. The Catania consulate alone invoiced \$673,973 worth to the United States during the calendar year 1914.

FAVORABLE TRADE BALANCE OF UNITED STATES.

The imports, duties collected, and exports for the week (five days) ending September 11, 1915, at 13 principal customs districts of the United States were:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah)	\$36,809	\$1,574	\$37,125
Massachusetts (Boston).....	2,903,051	22,375	2,226,828
New York.....	13,216,452	2,278,700	16,063,800
Philadelphia.....	428,983	108,227	1,303,992
Maryland (Baltimore).....	296,884	9,234	1,429,368
Virginia (Norfolk).....	161,380	22,031	1,300,616
New Orleans.....	1,073,414	67,164	2,197,082
Galveston.....	255,020	63,348	2,620,625
San Francisco.....	463,977	61,762	264,085
Washington (Seattle).....	1,699,609	28,287	2,144,581
Buffalo.....	393,080	21,013	1,225,084
Chicago.....	495,723	99,499	175,900
Michigan (Detroit).....	429,105	29,503	2,557,008
Total.....	26,921,467	2,813,917	33,593,708

The above figures show a favorable balance on merchandise transactions for the week (five days) ending September 11 in the 13 customs districts of \$6,672,241. The 13 districts cited handled about 92 per cent of the import and export business of the country, based on the transactions in June, 1915.

Cotton exported during the week (five days) ending September 11 amounted to 46,151 bales, making the total since August 1, 1915, approximately 216,409 bales.

Data for Current Year.

A statement of the imports, duties collected, and exports at the 13 ports, which handled about 92 per cent of the total foreign commerce of the United States, is given below for each week since the beginning of the present fiscal year:

Week ending—	Imports.	Duties collected.	Exports.	Excess of exports.
July 3.....	\$29,896,466	\$3,169,059	\$50,442,243	\$20,545,778
July 10.....	23,126,932	2,734,116	40,301,146	17,674,214
July 17.....	32,908,191	3,778,167	40,270,553	7,362,362
July 24.....	31,213,917	3,762,327	54,122,360	22,509,443
July 31.....	30,258,698	3,694,780	54,234,569	23,975,871
Aug. 7.....	34,294,282	3,433,077	43,239,737	13,945,455
Aug. 14.....	22,435,976	3,364,946	51,266,373	28,829,397
Aug. 21.....	32,198,560	3,401,934	50,823,835	18,625,275
Aug. 28.....	27,042,725	3,188,243	60,311,764	33,269,039
Sept. 4.....	32,454,477	3,531,478	60,071,198	27,616,721
Sept. 11.....	26,921,467	2,813,917	33,593,708	6,672,241

MOTOR BOATS FOR EASTERN CUBA.

[Consul P. Merrill Griffith, Santiago, Aug. 11.]

Santiago de Cuba is situated on a bay about 6 miles from the sea. On the opposite side of the bay are several small villages, where are located the summer homes of Santiago's most prominent families. There is also a yacht club, with nearly 300 members, and the fishing in the bay is excellent. These facts, as a matter of course, make a demand for motor boats, of which there are comparatively few, the demand being chiefly for a strongly built boat of medium price.

BIOSCOPE FILMS IN SOUTH AFRICA.

[Consul Edwin N. Gunsaulus, Johannesburg, July 29.]

A recent article on the use of and practice in dealing with bioscope films in South Africa, contributed to one of the Johannesburg newspapers, contains several features that will doubtless be of interest and practical value to the manufacturers of films in the United States, from which country South Africa largely draws for this form of entertainment.

In this newspaper article the writer truly states that the bioscope film industry in South Africa has been brought to a highly organized condition that falls little short of perfection. The present advance in the manner of dealing with bioscope films in this country is largely the work of the African Films Trust, which supplies the material for the exhibitions to all but some half dozen of the 250 cinema theaters in South Africa. It is stated that every week the trust imports approximately 60,000 feet of bioscope films at a net cost of \$5,000. In addition, the Treasury of the Union of South Africa benefits to the extent of \$600 to \$700 weekly by the proceeds of the special film tax of \$1.20 per 100 feet.

Johannesburg the Film Center.

The film industry in South Africa centers in the headquarters of the trust in Johannesburg, and from this city films are distributed on the several circuits to the picture-theater proprietors, going by easy stages in order to minimize the cost of railway carriage. All of the imported films that circulate throughout South Africa are, in the first instance, unpacked and displayed at Cape Town. They then go directly to Johannesburg and are passed through the local theaters in accordance with the requests of the various exhibitors. It is said the weekly bill for the transportation of films is about \$1,750. In Johannesburg there is an entire change of program at all of the bioscope houses twice a week, on Mondays and Thursdays, but in most of the smaller towns the program runs one night only, where the demand is for plain, lurid melodrama.

There is a considerable number of bioscope theaters for natives (colored people), and a careful censorship is exercised in respect to the films shown in these theaters. Wild West plays strongly appeal to the colored population, as well as the broad humor of other American films. It is stated, as an interesting fact, that hospitals for the insane are using films for the amusement and distraction of the unfortunate inmates.

Local Views.

In this connection, it is of interest to note that the African Films Trust is shortly expected to be in a position to test the capacity of the South African as a cinema actor, as a first-class producer is coming from America to superintend this feature of the business. In addition, operators have been recently engaged, in conjunction with the safety first committee, in taking underground mining pictures. This film is supposed to possess an educational value in showing how accidents are caused, often through carelessness, and how, with due precautions, these accidents may often be prevented.

At the headquarters of the trust in Johannesburg about 75 people are employed in the various departments in connection with the

processes of distribution, preparation, and repairs. The locally made pictures, such as the Weekly South African Mirror, are here prepared for exhibition.

In relation to the above, it may be stated that a full and comprehensive report on the use of and market for bioscope films in South Africa, forwarded by this consulate, was published in COMMERCE REPORTS on April 3, 1915. Accompanying this was a complete list [file No. 44130] of bioscope theaters in the Johannesburg consular district, with the name and address of the manager in each case. There was also given a list of the principal cities and towns of the district (having over 1,000 white inhabitants) thought capable of supporting bioscopes, together with much other useful information on the subject.

A WEEK'S TRADE IN COPPER.

The imports and exports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan during the week ended September 4, 1915, follow:

IMPORTS.

Countries.	Ore, matte, and regulus (copper content).		Pigs, ingots, bars, plates, and old, etc.	
	Pounds.		Pounds.	
Canada	156,355	\$18,085	1,615,200	\$263,930
Cuba	1,232,000	72,696		
Chile			1,136,000	210,000
Chosen	47,600	4,300		
Total	1,435,955	95,081	2,751,200	473,930

DOMESTIC EXPORTS.

Countries.	Ore, matte, and regulus.		Pigs, ingots, bars, plates, and old, etc.	
	Tons.		Pounds.	
Denmark			360,757	\$67,780
France			1,782,452	315,097
Italy			49,376	11,110
Netherlands			4,524	887
Norway			467,684	69,744
England			1,338,642	241,464
Scotland			4,520	1,368
Canada	460	\$8,956	14,907	4,924
Chile			1,471	425
Peru			1,708	390
Venezuela			403	160
Philippine Islands			6,648	1,523
Total	460	8,956	4,033,092	714,832

CHEESE PRICES IN THE NETHERLANDS.

Consul General Soren Listoe, at Rotterdam, quotes as follows the wholesale market values of farmer-made, full-cream cheese per 50 kilos (110 pounds) in Holland for the months of June and July, 1915: Gouda cheese, \$19.30 to \$22.51; Edam cheese, \$19.30 to \$22.91; Leyden cheese, \$16.08 to \$17.69. To these prices, however, must be added the commission, cost of delivery to stores, and sundry small expenses.

PROCEDURE OF ITALIAN CIVIL COURTS.

[Consul Jay White, Naples, June 22.]

That portion of the Italian Code of Civil Procedure pertaining to the execution of judgments obtained in foreign countries reads:

Article 941. The Court of Appeal has power to enforce execution of judgments issued by foreign tribunals, but an examination is necessary by which the court must ascertain (1) if the foreign sentence was issued by a competent judge; (2) if the defendant was regularly represented or legally absent; and (3) if the foreign sentence contains any statement against Italian law.

In other words, an American has the right to put into execution in Italy the award of an American court, but the Italian Court of Appeal must ascertain that he has followed American rules of procedure in calling the defendant before the judge to answer to the claim presented against him. To do this, the plaintiff must present before the Court of Appeal the American law (or a legal extract of the same) containing the rules of procedure followed in the United States when a creditor asks judgment against a debtor; and he must also show that he has followed exactly American rules and regulations and that the judgment he has obtained against the debtor is legally perfect in his country. The Italian Court of Appeal has the right to ascertain if the legal formalities, according to American procedure, have been exactly followed, but has not the right to examine into the merits of the case.

Procedure in Commercial Matters—Court Costs.

That it is easier and less expensive to start a lawsuit before the proper tribunal in Italy than it is to present a foreign verdict for the formal examination by the Court of Appeal, as above mentioned, is the opinion of Francesco Montefredini, a Naples advocate, who has courteously furnished the data presented in this report. With relation to the Italian procedure in commercial matters, Mr. Montefredini states:

When the sum involved is more than \$300 the competent authority is the Tribunal, composed of three members. The Tribunal and the Court of Appeal decide every question of right. In case the Court of Appeal, in issuing sentence, has made an improper interpretation of some articles of the laws, the plaintiff has the right to present a claim to the Supreme Court or Court of Cassation. To present this claim he must make a deposit of \$30 to the Government Treasury. If the Supreme Court finds that the Court of Appeal has erred in the application of the law it cancels the judgment of the Court of Appeal and remands the action to another Court of Appeal for definitive action.

It is difficult to say what is the cost of a lawsuit in Italy. (1) All documents must be legalized at the offices of the Government. The fees for this legalization are of two kinds. If the documents are ordinary letters one must pay \$0.50 for each letter, but if the documents are declarations of debt one must pay a proportional tax, namely, 1, 2, or 3 per cent, according to the form of contract contained in the document. All documents issued in foreign countries must be viséed by an Italian consul and also by the Minister of Foreign Affairs at Rome. (2) The sentences of the Tribunal and of the Court of Appeal are subject to a tax in favor of the Government according to the judgment given. (3) All the defense must be submitted to the Tribunal or to the courts written on special paper, the cost of which is \$0.75 per sheet of four pages. Further, a copy must be given to the other party to the suit, and the cost of the paper is the same. Other explanatory defenses may be printed as an ordinary booklet. (4) Each party must have a solicitor or lawyer or barrister.

Attorneys' Fees Fixed by Law.

There is a legal tariff of fees for solicitors and lawyers. The attorney in an ordinary lawsuit, where no difficult or intricate legal questions are discussed, is

entitled, as his honorarium, to about 1 per cent of the money involved before the Tribunal, about 2 per cent before the Court of Appeal, and about 1½ per cent before the Supreme Court, with a minimum (fixed) fee of \$20 before the Tribunal, \$40 before the Court of Appeal, and \$30 before the Supreme Court. It is forbidden by law in Italy to agree with the client for a percentage of the money involved. A contract of this kind does not hold good.

During July, August, September, and October only urgent cases are handled. In the ordinary course a lawsuit before the Tribunal takes 8 or 9 weeks; before the Court of Appeal, 9 to 10 weeks, and perhaps more.

FIRE INSURANCE IN CANADA.

[Consul Felix S. S. Johnson, Kingston, Ontario, Aug. 30.]

Fire insurance risks in Canada at the end of 1914 totaled \$3,448,-606,887, an increase of \$296,000,000; gross cash premiums totaled \$35,902,838, an increase of nearly \$800,000. Of these premiums \$16,487,549, or nearly 50 per cent, went to British companies, while \$11,176,142, or about one-third, went to American companies, the remainder—\$8,239,147—being the amount obtained by Canadian concerns.

Reinsurance and return premiums totaled \$8,355,958, as compared with \$9,342,295 for 1913. The net loss to all companies was \$15,357,-389, as compared with a loss of \$14,601,148 in the previous year. These losses in 1914 were made up as follows: American and other foreign companies—incurred, \$1,772,160; paid, \$1,538,308; British companies—incurred, \$7,981,818; paid, \$7,796,480; Canadian companies—incurred, \$3,115,119; paid, \$3,022,601.

For the 10 years from 1905 to 1914, losses of Canadian companies increased from \$1,399,065 to \$3,022,601, while those paid by British companies grew from \$3,634,706 to \$7,796,480, and those of the United States and other foreign companies, which in 1905 were \$966,748, grew in 1914 to \$4,538,308. The gross amount of policies, new and renewed, last year was \$3,099,452,177, as compared with \$2,925,200,553 in 1913. Of the 1914 total, United States and other foreign companies secured \$1,037,711,865, British companies \$1,398,-200,935, and Canadian companies \$663,539,377.

The following figures show the total net cash premiums in Canada in 1914: United States and other foreign companies, \$8,772,188; British companies, \$13,710,942; Canadian companies, \$5,063,750; total, \$27,546,880.

The United States companies' chief assets are \$8,213,737, invested in bonds and debentures. They hold no real estate, and their total assets in Canada amount to \$10,354,106. Assets of the Canadian companies total almost \$17,559,644. Bonds and debentures occupy first position. They amount to \$6,883,614; loans on real estate to \$3,169,250; and stock to \$2,147,452. Agents' balances and premiums outstanding amount to \$2,038,550. Total liabilities of these companies, not including capital stock, amount to approximately \$7,928,106. The total assets in Canada of British fire insurance companies amount to \$35,950,145. The largest item in these assets is loans on real estate, totaling \$14,695,586, and these companies hold real estate valued at \$2,887,100.

CONTINENTAL SUBSTITUTES FOR ABSORBENT COTTON.

[Consul General Julius G. Lay, Berlin, Germany.]

Although several firms in Germany advertise that they manufacture substitutes for absorbent cotton, such substitutes are not generally sold to the retail trade nor can they be obtained at every drug store.

Since the present European war began the demand for cotton substitutes has increased. The high prices of cotton and the possibility that they may soar higher have caused many experiments to be made with paper pulp and cellulose materials. The substitutes so far produced are generally much cheaper than cotton, but their sale has been retarded by the fact that they do not possess all of its good qualities.

"Lignin" Has Large Sale in Berlin.

The only substitute for absorbent cotton that has found a large sale in Berlin is the Zellstoff-Watte "Lignin" sold by Fritz Seyffert, Barbarossastrasse 32a. This particular substitute is made of pure pine cellulose and can be commercially produced much cheaper than absorbent cotton. It is chiefly used to stop bleeding. It is claimed that it absorbs blood better than cotton, but it can not compete with that fiber as a dressing for a wound. Physicians state, however, that "Lignin" serves very satisfactorily as a second dressing.

Mr. Seyffert states that "Lignin" is made according to a secret process. The following prices are quoted: In 50-kilo (110.23-pound) lots, 76 pfennigs per kilo (8.20 cents per pound); in 100-kilo (220.46-pound) lots, 74 pfennigs per kilo (7.99 cents per pound), and 200 to 300 kilo (440.92 to 661.39 pound) lots, 72 pfennigs per kilo (7.77 cents per pound); f. o. b. Berlin. "Lignin" is sold in sheets measuring 13.78 by 23.62 inches and in packages weighing 8.82 pounds or in rolls weighing 2.20 pounds each.

[Consul Emil Sauer, Goteborg, Sweden.]

Two Swedish Firms Make Cellulose Wadding.

There are two firms in Sweden (so far as this office was able to ascertain) that manufacture cellulose wadding from chemical wool pulp for dressing wounds. These are the Frovifors Bruks Aktiebolag, Frovi, and the Stora Kopparbergs Bergslags Aktiebolag, Falun. The latter is in the consular district of Stockholm.

The wadding is prepared in very thin sheets—like tissue paper, but crimped—and in general appears to be manufactured in the same way as tissue paper. This consulate was not able to secure details regarding the processes of manufacture, as these are held secret. The Frovifors Co., however, expressed a willingness to sell its process to an American firm.

[Consul Augustus E. Ingram, Bradford, England.]

Bog Moss as a Surgical Dressing.

A recent article in the Yorkshire Post described in a very interesting manner the collection in Westmoreland fells—it also is found on the Yorkshire moors—of the bog moss *Sphagnum cymbifolium*, which is of great value as a surgical dressing. The moss is permeated with minute tubes which in a natural state hold water eight or nine times the weight of the plant, so that when it is dry it is one of the most absorbent materials known.

It is antiseptic, soft, light, and cool. As very little preparation is necessary before use if it is carefully gathered—for it has only to be sterilized and placed in flannel bags—it is a very economical dressing. It has for some time been used in hospitals in this country and before the war was supplied from Germany. In German towns it is said to be a common sight to see country women with big baskets of plants going into chemists' shops to sell or exchange their goods.

Method of Preparation.

The moss is easier to pick over if the water has not been wrung from it; but, plucked in handfuls—the strands 6 and 7 inches long coming away with no particles of soil about their roots—it should be spread on the rocks or preferably on nearby bushes so that the air can get at it from above and below. In a few days it becomes perfectly dry and bleached white. It is then packed in clean cotton sacks, and though they are usually a yard long and over a foot wide they weigh only 3 to 4 pounds each. Later it has to be picked over to remove all bits of grass, bracken, rushes, etc., and is then tightly packed in sacks or sheets and sent off to be sterilized.

The Post's article referred to a pamphlet recently circulated by the British Board of Agriculture [a copy of which will be loaned to those interested by the Bureau of Foreign and Domestic Commerce or its branch offices; ask for file No. 65663] in regard to the cultivation and collection of medicinal plants in England, from which it is seen that for many years the main source of British drugs has been mid-Europe, particularly Germany and Austria-Hungary.

MAXIMUM FOOD PRICES IN THE NETHERLANDS.

[Commercial Attaché Erwin W. Thompson, The Hague, Aug. 25.]

Holland fixes maximum prices for most foodstuffs. The August list contains the following, reduced to American cents per pound:

Commodities.	Cents per pound.		Commodities.	Cents per pound.	
	Whole-sale.	Retail.		Whole-sale.	Retail.
Wheat flour:			Butter:		
Bolted.....	3.77	4.73	110-pound kegs.....	25.45
Unbolted.....	3.18	4.00	Smaller lots.....	26.36	29.19
On Government flour			Cheese:		
card.....		2.45	Edam standard.....	15.27	20.91
Wheat bread:			Skim milk.....	6.55	10.00
White.....		4.36	Sugar, granulated.....	8.82	10.00
Brown.....		3.72	Salt.....		1.63
On Government bread					
card.....		2.18			

ORANGE-CROP OUTLOOK IN SEVILLE DISTRICT.

[Consul Wilbur T. Gracey, Seville, Spain, Aug. 15.]

The general prospects of the orange crop of the Seville district are normal, the heavy rains of last winter having benefited the trees, and a full medium crop is looked for. [The 1914 Seville crop was estimated at 25,000,000 sweet and 66,000,000 sour oranges; in 1913 the yield was 30,000,000 sweet and 70,000,000 of the sour variety.] The flowering of the trees was satisfactory.

MACHINERY FOR EXHIBIT IN BUENOS AIRES.

[Special Agent J. A. Massel.]

During a recent stay in Buenos Aires an opportunity occurred for visiting the Industrial School of the Nation. This is a technical institution established for the purpose of giving the proper theoretical and practical training to young men desirous of becoming competent to manage and direct industrial and construction work. The studies are divided into four branches, and there is a course of six years, four of which are devoted to theoretical studies and two to practical training in the various shops of the school.

To provide for this latter there has been established a foundry, a machine shop, a carpenter shop, an electrical workroom, a laboratory, and a special railroad material showroom, all fully equipped with working models and sections of every description. Besides these there is a separate museum of working models in mechanical, electrical, and other lines, with exhibits of pumps, engines, and almost every other class of appliance.

An American visitor observes with some surprise, on visiting this well-stocked plant, that the great bulk of the machine tools in the shops, and practically all the working models and samples in the museum, are of European make, with German predominating, while hardly any of them are from this country. This, it is explained, is due to the fact that all of the models, as well as many of the tools in use, were provided by the manufacturers without cost to the school. Just before the European war broke out, it is stated, a group of German manufacturers offered to provide a complete equipment of modern tools for the shops, provided that the school would eliminate all not of German make.

When it is considered that this institution is attended by about 550 students, and that the exhibits are inspected by thousands more every year, it is easy to see how much foresight the European manufacturers have shown in supplying the needed materials and implements, and how they have benefited by it in practice. The exclusion of American makes is not the result of prejudice, for the school authorities are willing to give special space to exhibits from this country; and the present is the time to take advantage of their offer, which furnishes an excellent and unusual medium of advertising.

These exhibits are given to the school, which arranges for getting them through the customs free of charge, and pays the expenses of their installation. It is desirable to have models of machinery fitted with electric motors for use with a 220-volt continuous current in order to exhibit them in actual operation. It is also useful to have models of complicated machinery accompanied by diagrams showing the internal construction. Classes of machinery which would be particularly acceptable are internal-combustion motors, refrigerating machinery, which is coming into extensive use in Argentina, and equipment for an hydraulic laboratory, for which space has been reserved and which is to be built in the near future. The installation of the latter would of course have to follow the plans already laid out. A project for a hall containing a special exhibit of agricultural machinery is also under consideration.

[Lists of the various classes of machinery, tools, and materials which are at present actually owned by the school, and of those which

it would be desirable to secure, have been received by the Bureau of Foreign and Domestic Commerce and will be loaned on application. Refer to File No. 750.]

SUGAR EXPORTS FROM JAPAN.

[Extract from Japan Chronicle of July 6, by Consul General George H. Seidmore, Yokohama.]

Not only are Japanese exporters of sugar to China now exempt from any bad effects of the anti-Japanese boycott in China, but are materially benefiting therefrom. On the outbreak of the anti-Japanese movement, toward the end of March, Chinese dealers in sugar in Shanghai organized themselves into two opposing groups, northern and southern. The northern group resolved upon dealing solely in Hongkong sugar, to the absolute exclusion of Japanese sugar, and threw all manner of obstacles in the way of the southern group. The result was a complete stoppage of exports to China of Japanese sugar in April and May. Taking advantage of the scarcity of Japanese sugar on the Shanghai market, dealers belonging to the northern group pushed their sales as hard as they could, with the inevitable result that their stocks entirely ran out, while there was no hope of obtaining any large supply of Hongkong sugar.

At this psychological moment a fresh demand sprang up on the Shanghai and adjacent markets. The majority of the members of the northern group seceded and, going over to the side of the southern group, laid in stocks of Japanese sugar almost irrespective of quotations. For the last month, therefore, there has been a remarkable activity in exports from Japan; the Dai Nihon Seito Kaisha is said to have exported as much as 200,000 bags, while forward contracts for close on 100,000 bags were made elsewhere for August and September delivery at 12 yen (\$5.976) per bag, a figure unprecedentedly high. But for the anti-Japanese boycott, which eventually entailed extraordinary conditions on the China market, forward transactions would have been in the neighborhood of 9 yen (\$1.482). As it is, the market continues in an upward direction.

AMERICAN COAL FOR DANISH NAVY.

[Consul General E. D. Winslow, Copenhagen, Aug. 20.]

The Danish Navy has just received 2,600 tons of American steam coal from the Atlantic coast. This shipment is an experiment, and if the coal equals the Welsh coal in its steaming qualities and present conditions continue in England more business may be expected. The coal was laid down in Copenhagen c. i. f. at about 55 shillings (\$13.38) per ton.

The importation of American coal depends solely on its quality and c. i. f. price. Heretofore the great fuel exporter to this Kingdom has been England, and Danish importers are now looking about for new sources of supply. Two Copenhagen firms [whose addresses may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices by referring to file No. 65741], wish to know the quality of coal offered and its c. i. f. price in Copenhagen.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Peanut oil, No. 18298.—A firm in New York requests this bureau to place it in touch with American crushers of peanut oil. The firm is in the market for a large quantity.

Enameled tinware, antique copper work, etc., No. 18299.—A firm in New Zealand is desirous of communicating with American manufacturers of enameled tinware, antique copper work, celluloid, gelatin, or other decorative and good advertising material suitable for hanging in rooms and public places.

Washing machinery, No. 18300.—A firm in Spain informs an American consular officer that it is desirous of establishing commercial relations with American manufacturers of washing machinery. References given. Correspondence should be in Spanish.

Cotton gingham and underwear, No. 18301.—A commission agent in Norway informs an American consul that he desires samples of American printed cotton gingham and cheap cotton underwear. Terms and catalogues are desired. If possible 30 or 60 days' credit is requested. Correspondence may be in English.

Cotton and cotton yarn, No. 18302.—An American consul in a neutral country reports that a firm in his district would be glad to correspond with American dealers in raw cotton or cotton yarn.

Glass-making machinery, No. 18303.—An American consular officer in the Far East reports that a citizen of the Philippine Islands contemplates building a glass factory in a nearby country, and he desires that American manufacturers of glass-making machinery send him catalogues and price lists. Correspondence may be in English.

Steel for pens, No. 18304.—An American consul in Spain reports that a firm in his district manufacturing steel pens is desirous of importing from the United States from 13,228 to 17,687 pounds of steel a year from 0.59055 to 0.98425 inch in thickness and 2.12598 to 3.1496 inches in width. The firm will make purchases on its own account, and prices should be quoted for the goods delivered in Barcelona. Correspondence should be in French or Spanish.

Leather belting, No. 18305.—An American consular officer in Switzerland reports that an importer and dealer specializing in American machinery desires to extend his connections in America, and requests that he be put in touch with manufacturers of leather belting for machinery. The inquirer is willing to act as agent or purchase outright. Catalogues and quotations indicating the lowest export price and time of delivery are requested. References given. Correspondence should be in English.

Field glasses, No. 18306.—A jeweler on the East African coast informs an American consular officer that he desires names and addresses of American firms supplying prismatic field glasses.

Vacuum bottles, No. 18307.—A contractor in India desires to obtain catalogues and price lists from American manufacturers of vacuum bottles. It is advisable to ship cash against documents either in American port or through a bank in India. Correspondence should be in English.

Chemicals, No. 18308.—A large chemical manufacturer in Switzerland would like to receive quotations f. o. b. shipping point or c. i. f. Marseille on large quantities of the following: Formaldehyde, caustic potash, alum, hyposulphite of sodium, calcium bichromate, permanganate of potash, oxalic acid, naphthalin, phosphate of sodium, carbonate of potassium, sodium sulfide, sulphate of aluminium, tartaric acid, and citric acid. Correspondence may be in English, German, or French.

Nigrosin, No. 18309.—A consular officer in Norway reports that a well-established firm wishes to communicate with American exporters of nigrosin for use in the manufacture of shoe polish. The goods must be of a deep, black color.

Electrical goods, No. 18310.—A business man in Spain wishes to act as representative for American manufacturers of all kinds of industrial electrical machinery, scientific apparatus for doctors and surgeons, etc. He advises that he is prepared to pay cash with orders. Correspondence should be in Spanish.

Fine mechanical tools, No. 18311.—An American consul in Switzerland reports that a business man in his district is desirous of communicating with American manufacturers of fine mechanical tools. Catalogues and lowest export prices are desired. References furnished. Correspondence should be in English.

Ice-making machine, No. 18312.—An American consul in India reports that a physician desires to purchase an American ice-making machine for his mission hospital. Machines capable of working under hard conditions and with water containing a high percentage of mineral matter, especially salt, are advisable. Catalogues and price lists are requested. Correspondence may be in English.

Copper, No. 18313.—A report from an American consular officer in Spain states that a business man wishes to secure one sheet of red copper 4.90 meters long, 1 meter wide, and 13 millimeters thick. One-half sphere of red copper 0.75 meter radius and 18 millimeters thick, and 1 cupola of red copper 1.50 meters in diameter and 13 millimeters thick. The copper must be guaranteed chemically pure, as it is to be used for a grease-distillation apparatus. A diagram accompanies the report, and it may be examined at the Bureau or its branch offices. (Refer to file No. 65518.) Correspondence should be in Spanish.

Universal geared scroll chucks, No. 18314.—An importer of American machinery in Switzerland desires to communicate with American manufacturers of universal geared scroll chucks—combination and independent, for lathes. The importer will act as agent or purchase outright. Catalogues and price lists are solicited. References given. Correspondence should be in English.

Cigarette and match-making machine, No. 18315.—An American consular officer in Spain reports that a local firm is in the market for several automatic machines for the manufacture of cigarette boxes and match boxes. Bank references given. Correspondence should be in Spanish.

Electrical supplies, No. 18316.—A firm in Spain is anxious to communicate with American manufacturers of electrical supplies, such as electrical lamps, switches, shade holders, and small apparatus. It wishes to make purchases on its own account or to do business on a cash basis. References given.

ABNORMAL PRICES FOR RAILWAY TIES IN ENGLAND.

It is believed by many railway authorities in Great Britain that the present abnormal prices for sleepers will be maintained for at least one or two years before sleepers again reach the normal range of quotations. This is a statement just issued at Ottawa from the Canadian Government trade commissioner in London. His report is published in great detail in the September 6, 1915, number of the Weekly Bulletin of the Department of Trade and Commerce, Ottawa.

Pitch-pine sleepers have lately been sold f. a. s. American ports for about 75 cents each, and the delivered cost c. i. f. English ports during the past three or four months has been \$1.50 to \$1.75 each.

[A list of importers of railway ties in England may be had from the Bureau of Foreign and Domestic Commerce; refer to file 57508. Exhaustive details concerning the railways of the United Kingdom will be found in the Railway Yearbook, price 75 cents, issued by the Railway Publishing Co., 30 Fetter Lane, Fleet Street, London, E. C.]

MINERAL PRODUCTION IN ALBERTA.

[Consul Samuel C. Reat, Calgary, Alberta, Canada, Aug. 18.]

Although no copper is produced in the Province of Alberta at present, six copper claims, estimated as being worth \$1,000,000, have been acquired near Eldon Siding, between Banff and Laggan, by the Alberta Copper Co. According to assays made at the Trail smelter, the ore deposits show 13.64 per cent of copper and some gold.

The company has just completed a road from Eldon Siding to the mine, 3 miles distant, including a 200-foot bridge over the Bow River. As the mine is 3,000 feet above the Canadian Pacific Railway track, in the very side of the mountain, there will be no need for hoisting and the mine can be worked comparatively cheaply. The manager of the company states that the only equipment that will be purchased at the present time is an aerial tram. Within a week or two it is the intention of the company to start operations with 8 or 10 men, increasing this force as the work may develop.

Copper is not the only mineral to be found in this territory. The company also claims to have a vein of lead and silver close to the copper mine, while prospectors in that vicinity assert that gold deposits have been found. The land is all taken up for miles around. In 1914 the total production of gold in Alberta amounted to only 48 ounces, valued at \$992.

Official Statistics of Province's Output.

The Department of Mines of the Dominion Government at the request of this office gives the following statistics of the mineral production of Alberta for 1914:

Products.	1913		1914	
	Quantity.	Value.	Quantity.	Value.
Gold.....ounces.....			48	\$992
Coal.....tons.....	4,014,755	\$10,418,941	3,683,015	9,350,262
Natural gas.....M feet.....	7,174,400	1,079,466	7,172,157	1,214,670
Cement.....barrels.....	956,169	1,947,933	641,395	1,212,342
Clay products.....		893,408		463,190
Lime.....bushels.....	465,250	115,355	280,232	58,321
Sand-lime brick.....number.....	15,464,905	176,794	5,453,000	40,721
Stone.....		156,984		60,272
Other products.....		265,165		275,315
Total.....		15,054,046		12,684,284

The value of the mineral production in all Canada in 1914, according to revised statistics, was \$128,556,268, as compared with a total output valued at \$145,634,812 in 1913.

ADDITIONS TO DUTCH EMBARGO LIST.

[Telegram from American Consul General, Rotterdam.]

The following products have been added to those the exportation of which from the Netherlands is prohibited: Flax waste, suitable for the manufacture of yarns; steel wire and manufactures thereof; raw zinc and manufactures of which zinc is the principal component material; crude shellac; iron of all kinds; walnut wood; potatoes and certain fresh vegetables; medical and optical instruments of all kinds; cast-iron waste; iron profiles; steel for tools; yarns and manufactures thereof suitable for military use; mutton. The embargo on zinc plate has been raised.

SWISS TOYS FOR AMERICA.

In Switzerland the toy industry has recently been developed to a considerable extent. Various organizations in different parts of the country have joined hands with a view of increasing its efficiency and of encouraging and facilitating the exportation of its products. Important orders have already been filled for France and England. Some firms alone have produced hundreds of new models in wood and in pasteboard and more are being added daily. The industry is now in a position to take care of a large foreign demand and to supply much of the needs of the United States.

The new Swiss Foreign Trade Bureau Metropol, Börsenstrasse 10, Zürich Stand, Zürich (see (COMMERCE REPORTS for Aug. 26, 1915) has prepared lists of reliable manufacturers, is ready to put buyers in communication with the producers, and holds itself at the disposal of those anxious to form connections in this field. A collection of catalogues and samples will shortly be established there.

Additional information and addresses of Swiss manufacturers of toys, as well as of musical instruments of all kinds, may now also be had from the Legation of Switzerland in Washington, D. C., which

has declared its willingness to assist American importers in securing the needed articles.

The Legation has furnished to the Bureau of Foreign and Domestic Commerce sample lithographed sheets of soldiers of all the belligerent countries, which may be seen on application to the Bureau. These pictures of soldiers are for pasting on wood for the amusement of children, and will no doubt have a large sale in the United States.

DREDGING OF "TOWN CUT CHANNEL," BERMUDA.

[Consul Carl R. Loop, Hamilton, Aug. 20.]

Two steam dredges, the property of the Bermuda Government, are now engaged in deepening, widening, and improving the "Town Cut Channel," leading into the excellent harbor of St. George. The specifications require that when the work is completed the channel shall be 26 feet deep at mean low water and 120 feet wide. It is expected that the undertaking will be finished in November, 1916. The first steam vessel passed through the channel July 22, 1915, the ship being the *Corona*, a small passenger boat of about 110 gross tons and about 7½ feet draft.

Through the enlargement of this channel the town of St. George hopes to regain something of the ascendancy it lost when the capital was removed to Hamilton in 1810. However, unless the channel is enlarged beyond the dimensions of the present enterprise it will not be available for large seagoing vessels, and it is not believed that the accommodation of smaller vessels will have any appreciable effect on the relative importance of the two municipalities.

It is thought that the enlargement of the channel will have a considerable effect on the coaling trade, since St. George is a coaling station of some importance. About 9,000 tons of coal was imported in American bottoms during the first five months of 1915. Some of these vessels were compelled to discharge parts of their cargoes into lighters or to sail with only partial cargoes, in order to be able to enter the harbor. A number of American steamers calling for repairs and bunker coal have been obliged to anchor in an open roadstead. The opening of the new channel will doubtless greatly facilitate the sale of coal to shipping.

[The complete report on this subject, together with a map showing the progress of the dredging, will be loaned by the Bureau of Foreign and Domestic Commerce to interested persons. Refer to file No. 65726.]

CIRCULAR TO THE HEMP TRADE.

The Bureau of Insular Affairs at Washington is in receipt of the following cablegram from the Governor General of the Philippine Islands:

During August, 1915, Government fiber inspectors inspected and stamped 83,765 bales abaca as follows: A, 401; B, 964; C, 2,570; D, 4,854; E, 9,338; S-1, 2,737; S-2, 2,580; S-3, 937; F, 12,034; G, 3,348; H, 2,691; I, 11,978; J, 11,645; K, 3,796; L, 13,245; M, 5,156; strings, etc., 1,073. During last month Government fiber inspectors inspected and stamped 3,617 bales managuey as follows: 1, 144; 2, 1,946; 3, 1,401; D, 128.

ENGLISH EFFORTS TO INSURE WHOLESOME MILK SUPPLY.

[Consul Augustus E. Ingram, Bradford, Aug. 24.]

At the time the milk and dairies act of 1914 was passed an effort was made to have a provision inserted for certified milk, but as that effort failed the National Clean Milk Society, 2 Soho Square, London, was formed, its objects being to raise the hygienic standard of milk and milk products and to educate the public as to the importance of a clean and wholesome milk supply. That society is now working to introduce the score-card system of dairy-farm inspection, such as is now being used in the United States. The system has been adopted by the city of Bradford.

Another matter that is receiving attention by the British Board of Agriculture is the formation of milk recording societies. So far the dairy farmers have not fully appreciated the value of milk records, and, according to the report issued for the period ended last March, only 16 societies had been formed throughout the country. The board hopes, however, that the certificates of the milk yields that they propose to issue will enhance not only the value of the cows to which they relate but the progeny also, and that the possession of the Government certificate of a good milk record will be, in the course of time, eagerly sought after.

[Consul Ingram sent with this report copies of three reports on "Cost of food in the production of milk," published by the University of Leeds, and an article on "Economical rations," from the Yorkshire Observer of July 31, 1915. These will be loaned by the Bureau of Foreign and Domestic Commerce. Refer to file No. 65691.]

ALGERIAN BRIER ROOTS FOR PIPE MAKING.

American consular invoices for several years have shown shipments from Algeria of an annual average of \$100,000 worth of brierwood to the United States. The British consul at Bone, Algeria, mentions that an industry was established there about four years ago by an American firm for utilizing the roots of the "bruyere," or white-heather bush (*Erica arborea*). These are cut into the rough forms of tobacco pipes, called "ebauchons" in French, and the quantities sent away amounted to 342 tons, which represent between 5,000,000 and 6,000,000 of the rough forms. To produce this quantity an immense tonnage of roots was required, because very often, owing to cracks and other faults, only one rough pipe is found in a fair-sized root. This industry is an immense advantage to the country, as it tends to remove quantities of brushwood which otherwise are simply a danger to the forests and can only be got rid of at a very great expense. It can, however, only be carried on where water is plentiful, as it is necessary to keep the roots thoroughly damp from the moment they are drawn from the soil until they are cut into the rough forms and boiled. However, seeing the vast district covered with forest, the consul adds that it would appear that there is an opening for capital in the hands of an intelligent young man willing to work.

The United States imported during the fiscal year ended June 30, 1914, a total of \$250,385 worth of brierwood, ivy, and laurel root, while during the year just closed—June 30, 1915—the total imports reached \$306,892.

VISIT FROM CHAMBER OF COMMERCE IN HOLLAND.

A projected tour of the United States by representatives of the re-organized American Chamber of Commerce in Amsterdam, now known as the American-Export Chamber of Commerce, is announced. The Bureau of Foreign and Domestic Commerce is informed that the visitors will arrive some time in October, and will remain in this country about three months. They come with the double object of extending the membership of the organization in this country, and calling to the attention of boards of trade, chambers of commerce, manufacturers' and merchants' associations, individual firms and corporations, and any persons interested in the export trade of the United States, the opportunities that the Netherlands presents as an export center, especially with reference to the new and changed requirements resulting from the present war.

The committee from Amsterdam has asked for the cooperation of the bureau in conducting its campaign in this country, and has received from the bureau assurances of active assistance in the arrangement of the itinerary of the representatives, and for appointments and meetings in the various cities that they desire to visit.

The visitors will be received in the principal cities of the East, the Central West as far as Chicago, and the South as far as New Orleans. In meeting the business men of these cities, they will present, by means of slides and films, Amsterdam's facilities for handling foreign trade. The purpose of the organization is to maintain headquarters at Amsterdam, consisting of suitable rooms where books and magazines, pamphlets, and papers relating to all world business will be kept on file, so that commercial travelers, firms, and corporations can, at any time, receive information, free of charge, as to business openings, the best routes of travel, and anything that will be of benefit to them in their trade abroad. It is planned to exhibit trade and stock exchange reports, and to keep the addresses of individuals and firms desiring to open correspondence with the view of establishing business connections.

Details of all these features of the work of the Amsterdam office will be presented during the numerous meetings and conferences that are to be held in this country, and to make the campaign as effective as possible the Bureau of Foreign and Domestic Commerce offers to arrange to place this committee in touch with representative business men and organizations desiring to confer with the visitors. The latter have made a special study of plans for readjusting disturbed business relations, so that their lectures and addresses and private talks, it is believed, will be not only of special importance to business men, but also of general interest to the public. The support of the American-Export Chamber of Commerce at Amsterdam is to be derived from membership fees, and persons, firms, or corporations interested in its objects are eligible. Its year-book, recently issued, says of the plans of the reorganized body:

It is planning to make Amsterdam the center from which American advertising can be done. In its building, which will practically be a commercial museum, catalogues of American exporters will be classified and explained, so that any visitor can immediately obtain free information concerning American industries. The work of this chamber will be further enlarged, and it will interest itself in extending business relations all over Europe. Every American

commercial traveler in Europe would do well to inform this chamber as to the nature of his intended visit, in order that plans can be worked out and prepared so as to help make his visit a success. The chamber will maintain associate offices in all parts of Europe under its direction.

NEW TELEPHONE SERVICES FOR TIEHLING AND KAIYUAN.

[Consul General P. S. Heintzleman, Mukden, Manchuria, Aug. 5.]

The Chinese at Tiehling have long been aware that by improving the means of communication between the police stations the operations of brigands might be curbed; also, as the existing telegraphic service cost the merchants heavily, even though their requirements were not met, they hoped that the telephone system, once installed at Tiehling, might be gradually extended to Mukden on the south, to Fakumen on the west, and to Kaiyuan on the north. This plan enlisted the general support of the military, police, mercantile, and educational circles, who agreed to bear a share in the funds required and asked the prefect to sign a contract on their behalf. A contract was signed July 24, 1915, for the purchase of more than 60 telephones, a switchboard, and about 70 miles of telephone wires, at the price of \$6,500. A Japanese firm at Changchun is supplying these goods, which are coming from Osaka.

The prefect at Kaiyuan, at the suggestion of the Japanese consul, is carrying on negotiations with the same Japanese firm for the purchase of a telephone installation for Kaiyuan at the same price as for Tiehling.

[Articles on other new telephone installations in China have appeared in *COMMERCE REPORTS* for Apr. 14, June 11, and June 18, 1915.]

AMERICAN TRADE PUBLICATIONS FOR CHINESE GOVERNMENT.

[Commercial Attaché Julian H. Arnold, Peking, China, Aug. 6.]

The Commercial and Industrial Commission of the Ministry of Agriculture and Commerce, Peking, is installing a library of foreign trade publications for the purpose of assisting Chinese importers and exporters in making connections abroad. It is suggested that publishers of American trade directories favor this commission with copies of their publications, and if they can not do so gratuitously, address the commission, stating the character of the publications and the prices at which they can be secured. In this connection it is also suggested that American manufacturers furnish the Commercial and Industrial Commission with copies of their catalogues. The commission will also appreciate receiving complimentary subscriptions to American trade journals.

The Chinese people are very friendly inclined toward the United States and things American, and undoubtedly substantial results will accrue from sending American trade publications to the Commercial and Industrial Commission of the Ministry of Agriculture and Commerce, Peking, for the use of this commission in the development of the trade of China.

It is reported, writes Consul General E. D. Winslow, of Copenhagen, under date of August 19, that the loss to the Danish merchant marine through mines and torpedoing amounts to \$1,000,000.

CONSUMPTION OF WHEAT FLOUR IN BRAZIL.

[Ambassador Edwin V. Morgan, Rio de Janeiro, Brazil, Aug. 9.]

Mr. Lincoln Hutchinson, the commercial attaché of this embassy, has prepared a memorandum regarding wheat flour in Brazil, which shows that whatever injury Argentine interests have suffered is due rather to the development of a protected home industry than to an increase in American business resulting from the 30 per cent preferential tariff rebate that Brazil gives to American flour.

It was deemed advisable to send Mr. Hutchinson's memorandum to the American embassy in Buenos Aires. Mr. Hale, the commercial attaché there, prepared an article on the data that Mr. Hutchinson had supplied, which appeared in *La Prensa* on July 24. This article was inserted in the *Jornal do Commercio* of this city on August 3, it being believed that the reproduction of an article from a Buenos Aires paper would be more efficient in its effect than a publication emanating from this embassy.

Following is a translation of Mr. Hale's article in the *Prensa*, which was reproduced in the *Jornal do Commercio*:

It is interesting to note the steady advance in the consumption of wheat flour in Brazil, because wheat has not been cultivated in that Republic to any extent, and therefore flour has had gradually to displace the better-known bread made from mandioca, or cassava, which is indigenous to the country.

Up to the present practically all wheat has been imported, and a certain amount of flour, although the mills in Brazil have been steadily increasing their output of flour made from imported wheat.

Statistics of Imports and Home Production.

Statistics show the following figures, quantities being given in kilos (kilo=2204.6 pounds):

Years.	Imports of wheat flour.	Home production of flour from imported wheat (flour 65 per cent wheat).	Total consumption.
	<i>Kilos.</i>	<i>Kilos.</i>	<i>Kilos.</i>
1904.....	131,000,000	126,000,000	257,000,000
1905.....	141,000,000	139,000,000	280,000,000
1906.....	154,000,000	151,000,000	305,000,000
1907.....	170,000,000	161,000,000	331,000,000
1908.....	151,000,000	169,000,000	320,000,000
Total.....	747,000,000	746,000,000	1,493,000,000
1910.....	159,000,000	206,000,000	365,000,000
1911.....	159,000,000	217,000,000	376,000,000
1912.....	190,000,000	248,000,000	438,000,000
1913.....	170,000,000	285,000,000	455,000,000
1914.....	124,000,000	246,000,000	370,000,000
Total.....	812,000,000	1,206,000,000	2,017,000,000

Analyzing these figures, there is indicated the proportions of flour supplied by direct importation and by home production from wheat.

Years.	Imported flour.	Flour produced in Brazil.
	<i>Per cent.</i>	<i>Per cent.</i>
1904.....	50.9	49.1
1905.....	50.4	49.6
1906.....	50.5	49.5
1907.....	51.4	48.6
1908.....	47.2	52.8

Years.	Imported flour.	Flour produced in Brazil.
	<i>Per cent.</i>	<i>Per cent.</i>
1910.....	43.6	56.4
1911.....	42.3	57.7
1912.....	43.4	56.6
1913.....	37.4	62.6
1914.....	35.0	65.0
Period 1904-1908.....	50.0	50.0
Period 1910-1914.....	40.2	59.8

The consumption, therefore, in Brazil has increased from an average of 298,600,000 kilos per annum for the period 1904-8 to 403,400,000 kilos per annum for 1910-14. This increase in the annual consumption, which equals 104,800,000, has been supplied: (1) By an increase of home production of flour of about 90,000,000 kilos per annum, and (2) by an increase in imports from the United States of about 15,000,000 per annum.

Brazil's production of flour is increasing and is now about 50 per cent larger than importation. Since the 1904-8 period this home production has increased seven times as fast as importation. The Brazil industry of flour making seems to be well protected and will undoubtedly be further developed, while this relatively decreasing demand for imported flour has been and will continue to be easily met by the supplies from the United States.

CHAMBER OF COMMERCE FOR ALL NEW ENGLAND.

[Commercial Agent F. L. Roberts, Boston, Sept. 7.]

About two weeks ago the Boston Advertiser started publishing a series of articles showing the need for and value of a commercial organization that would serve all New England, eliminating sectional jealousies which now exist, and providing a medium through which the business interests of New England could act as a body on national and local questions. The initial step toward the formation of such a chamber was taken at a meeting of the New England Association of Commercial Executives early in September, when the plan was heartily indorsed, and it was voted that the members should submit the proposal to their respective boards of directors.

In an address before this meeting G. A. Copeland, of the Advertiser, pointed out the wide field that lay open to the activities of such an interstate organization. He drew attention, among other things, to the fishing schools maintained by Japan, and to the fact that during the decade 1902-1912 Japan doubled its marine catch and increased by 80 per cent the treated marine products. He suggested that a similar system of fishery training in New England might prove equally advantageous. He referred to the instruction in the language and business methods of Russia that, through the instrumentality of the chambers of commerce of Nottingham and Birmingham, has been introduced in the commercial schools and colleges of those sections of England. Persistent publicity, cooperation between business and the Government to secure better educational facilities and to create permanent trade exhibits, State legislation, and the maintenance of a bureau of information, were other suggested lines of activity open to a coordinated New England commercial body.

It is not planned to do away with any of the existing trade organizations, but merely to unite and supplement their efforts and to act in matters not within the scope of a single State chamber.

COW-TESTING RESULTS IN CANADA.

[Consul G. Russell Taggart, Cornwall, Ontario, Sept. 1.]

For the purpose of encouraging and assisting farmers to keep records of the quantity of milk produced by each cow, so that the profitable ones may be distinguished from the unprofitable, dairy-record centers have been established in Canada under the jurisdiction of the Dairy and Cold-Storage Commissioner.

According to the report just issued by the Canadian Minister of Agriculture for the year ended March 31, 1915, 35 of these dairy-record centers were in operation in 1914.

The report states that the activities connected with this cow testing consisted of—

(a) The publication of popular bulletins and circulars on the subject; (b) the frequent preparation of short articles for the press dealing with various aspects of the work and citing specific cases of increase in milk yield as a result of systematic testing; (c) addresses given by the recorders, provincial supervisors, and members of the headquarters staff; (d) personal visits to farmers by recorders; and (e) a very extensive correspondence.

Average Production of Milk Notably Increased.

The results are, according to the report, that "the average production of milk in Canada has been increased by 1,000 pounds per cow since this work was started. With over two and a half million cows in Canada, the value of the total annual production is thus increased by at least \$25,000,000, and the work is only just begun."

One of these dairy-record centers has been operating in the Cornwall district, and the report of the recorder concerning the results in 1914 has just been made to the Cornwall Cheese Board. The recorder states that the work has been most successful, and that increasing interest is being taken by the dairy farmers in the betterment of their herds and in the improvement of their milk supply.

Statistics Obtained in Cornwall District.

The recorder reports the following comparisons, giving the average, highest, and lowest production of the animals of the different ages tested:

Two-year-olds.—The average production of the 2-year-olds was 4,430 pounds milk and 170.3 pounds fat.

The lowest production of milk was 2,515 pounds, by a scrub Holstein. The lowest amount of fat was 95.1 pounds, by a scrub Ayrshire.

The highest amount of milk was by a pure-bred Holstein, which produced 7,994 pounds. The highest amount of fat was 315.7 pounds, by a pure-bred Holstein.

Three-year-olds.—The average production of the 3-year-olds was 4,718 pounds milk and 181.5 pounds fat.

The lowest amount of milk was 2,175 pounds, by a grade Jersey, and the lowest amount of fat 91.5 pounds, by the same cow.

The highest amount of milk was 9,999 pounds, by a pure-bred Holstein, and the highest amount of fat 379.9 pounds, by the same cow.

Four-year-olds.—The average production of the 4-year-olds was 5,058 pounds milk and 195 pounds fat.

The lowest production of milk was 3,375 pounds, by a scrub Ayrshire, and the lowest amount of fat 128.5 pounds, by the same cow.

The highest amount of milk was 13,027 pounds, by a pure-bred Holstein, and the highest amount of fat 513.2 pounds, by the same cow.

"Full age."—All cows 5 years and over are in one class, known as "full age," and their average production was 5,689 pounds milk and 212.1 pounds fat.

The lowest production of milk was 2,754 pounds, by a grade Jersey, and the lowest production of fat 105.1 pounds, by a scrub Holstein.

The highest amount of milk was 10,235 pounds, by a pure-bred Holstein, and the highest amount of fat was 389 pounds, by a grade Ayrshire.

Average, all ages.—The average production of all cows of all ages was 5,336.8 pounds milk and 202 pounds fat.

RECENT TRADE GAINS IN SOUTH AMERICA.

One of the most influential newspapers of Buenos Aires has recently published an article calling the attention of American exporters to a matter which is of great importance in connection with the present campaign for South American trade and which gives emphasis to much of the comment on faulty trade methods which has appeared from time to time in the publications of the Bureau of Foreign and Domestic Commerce. They point out that as the European conflict is prolonged the United States will probably continue to strengthen and expand the commercial position which the force of circumstances has caused the belligerent countries to abandon. They then continue:

This auspicious situation for American trade, however, will be but transitory if they do not take pains to consolidate these positions in such a manner as will enable them successfully to meet competition in the future. If, on the one hand, circumstances are facilitating the expansion of American trade relationships, they also involve, on the other, contingencies which will have to be faced when the nations at present in arms take up again their commercial and industrial activity.

The position of the United States to-day does not result primarily from their own efforts or initiative, and the present abnormal state of affairs might induce Americans into the error of believing that they have no occasion to sharpen their judgment or to display special commercial aptitude in order to conquer definitively the positions they have obtained. The present situation will be neither lasting nor tenable unless Americans modify their systems of sale and supply, having regard to reciprocal convenience. They ought to model their methods on those of the countries of Europe, offering the same advantages and adapting themselves to the exigencies and the peculiarities of the consumers whom they supply. They need to create an atmosphere which will secure them a preference.

It is finally pointed out that one of the chief obstacles to the permanence of American trade gains in South America when the war is over lies in the fact that the present increases are largely being secured through local European houses as intermediaries, and that, as these are turning to American sources of supply only provisionally, they will naturally, when conditions have again become normal, endeavor to resume their former relationships.

While some of the statements made in this article may possibly be overdrawn, it seems evident that they contain a very considerable amount of truth, and that manufacturers and exporters in this country to whom they apply would do well in giving them consideration.

STATE ENTERPRISES IN AUSTRALIA.

It is reported from Perth, capital of Western Australia, that in the legislative assembly the premier said the State trading concerns made a profit last year of \$100,000. The State steamers showed a loss of \$35,000, the sawmills a profit of \$135,000; though their actual expenditure was \$2,950,000, the receipts being \$1,510,000, there was \$800,000 worth of stock on hand.

HOSIERY AND KINDRED LINES FOR AUSTRALIA.

[Consul General J. I. Brittain, Sydney, New South Wales, Aug. 4.]

In a recent interview a salesman for American houses, who has carefully canvassed the field here, stated that the following lines of merchandise are suitable for the Australian market and are in demand:

Men's Hosiery and Underwear.

Men's cotton half hose to cost from \$0.80 to \$1.75 per dozen f. o. b. factory United States would find a sale here. This class of goods should have each single sock stamped "Cotton, made in U. S. A.," and the boxes or packages should also be stamped in a similar manner.

Cashmere socks at \$1.25 to \$4.50, with and without "clocks," are greatly in demand in Australia. They should be stamped "Wool, made in U. S. A.," or, if containing a percentage of cotton, "Wool and cotton, made in U. S. A." They are usually packed in half-dozen packages, not in boxes.

Popular lines of men's underwear are made of a fabric that resembles the lightest weight cotton knit goods made in the United States. The demand is for two-piece suits (not union suits) with quarter sleeves and ankle lengths. Medium weights are also in demand, but not the very heavy weights used in winter in the United States. Suits should run in quality from the very cheapest up to the best.

Garments for Women and Misses—Infants' Bibs.

The big demand in undergarments for women and misses is for union suits and combination suits in summer weight, cotton woven (or knitted) goods, at \$2, \$2.25, \$2.50, \$2.75, and \$3 per dozen, f. o. b. factory, and should be stamped "Cotton, made in U. S. A." They should all have quarter-length sleeves and be knee length.

Throughout Australia women's lightweight vests are in great demand, and I am informed that there are now fully 100,000 dozen sold in Australia that are made in the United States. New South Wales absorbs 25,000 dozen. These vests should cost \$0.80, \$1, \$1.10, \$1.25, and up to \$1.75 per dozen f. o. b. factory, and be branded "Cotton, made in U. S. A."

There is a good demand for an article made of Turkish toweling or Terry cloth, with some appropriate design woven in the goods. A sample that came from Germany cost 8½ cents each f. o. b. factory. Thousands of dozens are used here. They are about 8 by 11 inches and have ¾-inch fringe along the bottom edge. They are hollowed out at the neck and have two 6-inch pieces of ordinary white tape attached for tying. They are about like the wash cloth on sale in most drug stores in the United States.

Gloves, Piece Goods, and Palm Beach Cloth.

Women's cotton lisle gloves have been sold in large quantities. I have several times been asked if the United States could supply these goods and also the silk gloves that are so largely worn by American women. They are required in all lengths in cotton lisle and in silk lisle and silk.

Piece goods for women have been asked for. One large merchant told me that the goods were supplied from the Continent, but that a shortage is already apparent in this market. I understand there is a

good market for Palm Beach cloth, and that orders have already been taken, as well as for men's Palm Beach suits.

[The address of a Sydney buyer with whom American manufacturers of the foregoing lines might correspond may be had, upon request, from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65440.]

CANADIAN GOVERNMENT'S FRUIT-SELLING CAMPAIGN.

[Consul Felix S. S. Johnson, Kingston, Ontario, Sept. 4.]

Owing to the large crop of Canadian plums and peaches this year, the Dominion Government, through the Fruit Branch of the Department of Agriculture, is conducting an advertising campaign in the daily and weekly newspapers.

It was also proposed to supplement the newspaper advertising with window-display contests in all of the larger cities, for which good cash prizes were to be offered. At a meeting of a representative body of the Retail Grocers' Association and officers of the Fruit Branch this plan for window contests was discussed. Every member of the association expressed willingness to cooperate heartily with the fruit growers and the Agricultural Department in a special effort to sell more Canadian-grown fruit, and stated that it was unnecessary for the Agricultural Department to offer cash prizes in order to induce the growers to make window displays.

It was suggested that the money which was to have been offered for prizes be used in newspaper advertising. The Agricultural Department has acted upon the recommendation of the Retail Grocers' Association.

AUSTRALIA ENCOURAGES INVENTORS.

The State Cabinet of New South Wales, Australia, on August 11 decided to appoint a Patents Investigation Committee to assist in the development of inventions likely to be of general public utility.

The board will consist of a number of public officers expert in various lines of industry under the chairmanship of Mr. Griffith (Minister of Education), whose technical knowledge as an experienced patent attorney will be of considerable assistance to the board.

The board will be divided into a number of subcommittees, covering the various branches of industry, and the different inventions will be submitted to the subcommittee having technical knowledge in the particular line concerned. Any ideas which, after investigation, the board is of opinion are of value to the public will be submitted by it to the various public departments likely to be able to utilize them.

HIGH-PRICED AUSTRALIAN BEEF CATTLE.

[Sydney Morning Herald, Aug. 14.]

Melbourne.—What is claimed to be the highest price ever paid for a butcher's bullock was recorded at the cattle sales at Newmarket yards on Wednesday. A pure-bred Shorthorn bullock 4 years old realized £75 (\$365).

JAPAN'S SALES OF COTTON GOODS TO CHINA.

[Clipping from Japan Chronicle for July 20, transmitted by Consul General George H. Seidmore, Yokohama.]

The authorities have published an interesting table showing the competition between foreign rivals and Japan's chief lines of export in China. It is stated that, according to a quarterly report of the Chinese customs, of imports of cotton yarn and cloths from January to March, 1915, Japanese goods were the largest in quantity, all descriptions showing an increase over the figures for the corresponding period of last year—20 per cent in cotton yarn, 24 per cent in gray shirtings, 26 per cent in sheetings, 68 per cent in figured cloths ("aya momen"), and 20 per cent in T-cloths. Indian cotton yarn shows a falling off of 13 per cent, and a decrease is also recorded for European and American cotton cloth, while Chinese cotton yarn shows a steady increase, encroaching upon the markets of foreign goods. The following are the details of China's imports during the first quarter of 1915 as compared with the corresponding totals for January-March of last year:

Articles and sources.	Quantity.	Increase (+) or decrease (-).	Per cent.
Gray shirtings:	<i>Pieces.</i>		
Japan.....	44,980	+ 8,756	24
United States.....	175,936	- 478,568	73
Great Britain.....	815,990	- 194,792	19
China.....	27,080	- 2,703	9
Sheetings:			
Japan.....	2,504,466	+ 552,254	26
United States.....	217,443	- 265,778	57
Great Britain.....	50,820	- 124,904	71
China.....	229,324	- 43,164	18
Drills:			
Japan.....	2,704,466	- 68,562	7
United States.....	41,584	- 53,660	56
Great Britain.....	17,106	- 9,736	36
China.....	29,270	- 1,614	5
Figured cloths:			
Japan.....	203,760	+ 141,286	68
United States.....	560	- 4,060	88
Great Britain.....	468,810	- 162,970	26
Holland.....	1,180	- 2,078	64
China.....	100	+ 160	100
T-cloths:			
Japan.....	142,012	+ 28,238	20
Great Britain.....	348,856	- 22,326	6
Cotton yarn:	<i>Pounds.</i>		
Japan.....	48,105,333	+8,001,200	20
India.....	36,783,733	-5,626,000	13
Great Britain.....	24,800	- 185,200	88
Hongkong.....	127,067	- 81,733	39
China.....	23,716,933	+4,117,467	21

It is true that the imports of Japanese cotton drills show a decrease of 7 per cent, but it would be more correct to group these with figured cloths, the increase on the two together being $2\frac{1}{2}$ per cent.

Karachi Firm to Try American Typewriter Supplies.

A trial order for several kinds of typewriter ribbons, carbon, tissue, and typewriter papers, and typewriter oils resulted from the trade-extension efforts of the American consulates at Karachi, India. "It is probable," reports Consul James Oliver Laing, "that further business will develop with this Karachi house, as it has had several local contracts of a semi-governmental nature and several more such contracts on which it has bid are about to be awarded."

OUTPUT OF PIG IRON AT PENHSIHU, CHINA.

[Consul General P. S. Heintzleman, Mukden, Manchuria, Aug. 5.]

It had been previously estimated that the output of pig iron at the Penhsihu Colliery and Mining Co.'s plant for the current year would be 36,000 tons. Of late, however, the average daily output is 120 tons, and at times as high as 147 tons, so the output at the end of the year is expected to surpass the estimated amount.

The company's management has been receiving more orders than it can fill. The superiority of the product is becoming more widely known. The percentages of phosphorus and sulphur contained in pig iron are generally accepted as the criteria for grading its quality. In ordinary cases pig iron contains about .0024 or .005 of phosphorus and sulphur, while Penhsihu iron contains .00038 or .00044, respectively. Ordinary pig iron being quoted at \$17.50, Penhsihu iron is worth about \$35. At Newchwang the selling price is quoted at \$20 per ton, which is \$4 cheaper than Shanghai iron.

Purchases by Japanese—More Importance Attached to Iron Than Coal.

The price being exceptionally moderate, considering the superior quality, the Japanese Navy is purchasing some of the Penhsihu output. The Osaka Iron Works have placed an order for 15,000 tons, while the army arsenal at Osaka recently accepted a tender for Penhsihu iron.

The company has decided to attach greater importance to the manufacture of pig iron than the mining of coal, for the reason that, while the steamer freight on coal is about \$0.0005 per ton per mile, the railway freight thereon is about 10 times as great, and the company, having no railway of its own to transport its output of coal to the seaboard for export, is not in a position to compete with the Fushun coal of the South Manchuria Railway Co.

[An article on iron-mining activity in South Manchuria was published in **COMMERCE REPORTS** for Sept. 2, 1915.]

COMMONWEALTH STORES IN AUSTRALIA.

A dispatch from Melbourne says that one of the features of the report recently presented to the Australian Postmaster General on the working of the post office by Mr. M'Anderson, the financial expert who is now investigating the affairs of the various departments of the Commonwealth, is the recommendation for coordination among the various departments of the Commonwealth in the purchase and handling of stores. The digest of a scheme for this purpose has been prepared by the Director General of Works (Col. P. T. Owen), and it is understood that its main point, with certain modifications, met with Mr. M'Anderson's approval. A further proposal, in addition to those outlined in Col. Owen's scheme, is that, instead of separate stores all over Melbourne, Sydney, and other capital cities, the stores for all departments should, as far as possible, be under the same roof and under the control of the same officer. It is proposed to attach a permanent head to the new stores department, to be called secretary for stores, and, further, to attach the department to the Federal Treasury.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Construction work, No. 2621.—Sealed proposals will be received at the Office of the Superintendent of Prisons, Department of Justice, Washington, D. C., until September 23, 1915, for furnishing and delivering at the United States Penitentiary, Atlanta, Ga., electric wiring, metal lath, furring, corner beads, sanitary trim, and plastering materials for the bath, laundry, and tailor-shop building, in accordance with specifications, which may be obtained from the above office.

Construction work, No. 2622.—Sealed proposals will be received at the Office of the Supervising Architect, Treasury Department, Washington, D. C., until October 14, 1915, for the construction, complete (including mechanical equipment and approaches), for the post office at Logan, Ohio. Drawings and specifications may be obtained from the custodian of the site at Logan, Ohio, or at the above office.

Cement, No. 2623.—Sealed proposals for cement will be received at the United States Engineer's Office, second district, Portland, Oreg., until October 7, 1915. Further information upon application to the above office.

Construction work, No. 2624.—Sealed proposals will be received at the office of the Lighthouse Inspector, Tompkinsville, N. Y., until September 30, 1915, for furnishing labor and materials for erecting a third story and permanent roof of reinforced concrete on carpenter shop at the General Lighthouse Depot, Tompkinsville, N. Y. Blank proposals and particulars may be obtained from the above office.

Levee work, No. 2625.—Sealed proposals will be received at the United States Engineer's office, Queen and Crescent Building, New Orleans, La., until September 28, 1915, for constructing about 1,093,400 cubic yards of earthwork in the Lower Tensas and Atchafalaya levee districts. Further information on application.

Panama Canal supplies, No. 2626.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until September 24, 1915, for furnishing by steamer, free of all charges, on dock at either Colon (Atlantic port) or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama the following articles: Wrought-iron or steel pipe, cast-iron pipe, steel boiler tubes, steel tubing, chain, locomotive driving-wheel tires, dust guards for journals, grip nuts, twist drills, journal jacks, steel hand trucks, platinum wire, air-brake hose, flax packing, putty knives, window glass, crash toweling, and fish oil. Circular No. 966.

Construction work, No. 2627.—Sealed proposals will be received at the Office of the Supervising Architect, Treasury Department, Washington, D. C., until October 19, 1915, for the construction complete (including mechanical equipment and approaches) of the United States post office at Norton, Va. Drawings and specifications may be obtained from the custodian of the site at Norton, Va., or at the above office.

Forage, flour, and seed, No. 2628.—Sealed proposals will be received at the office of the General Supply Committee, Auditors' Building, Washington, D. C., until October 6, 1915, for furnishing the executive departments and independent governmental establishments, during eight months of the current fiscal year, from November 1, 1915, to June 30, 1916, inclusive, with forage, flour, and seed. Blank forms of specifications and instructions to bidders will be sent to the address of all manufacturers and dealers on the present mailing list, and will be furnished to others upon application to the General Supply Committee.

Battleships, No. 2629.—Proposals for constructing by contract two battleships Nos. 43 and 44, will be received at the Navy Department, Washington, D. C., until November 17, 1915, when they will be publicly opened. A circular of requirements for said vessels is now ready, and plans and specifications for their construction will be ready September 20th for distribution among prospective bidders. Forms of proposals and contract may be had on application to the department after September 30, 1915.

Construction work, No. 2630.—Sealed proposals will be received at the Treasury Department, United States Coast Guard, Washington, D. C., until October 4, 1915, for the construction of a bouthouse and accessories at the Oswego Coast Guard Station, Oswego, N. Y. Specifications and drawings, form of proposal, etc., and final information can be obtained upon application to the superintendent, tenth district, Coast Guard, Buffalo, N. Y., the keeper, Oswego Coast Guard Station, Oswego, N. Y., or to the Washington office.

Dredging, No. 2631.—Sealed proposals will be received at the United States Engineer's Office, Jacksonville, Fla., until November 8, 1915, for the construction and delivering steel hull $3\frac{1}{2}$ and 7 yard dipper dredge or for leasing such machine subject to purchase. Further information on application.

NEW WATER MAINS FOR HOBART, TASMANIA.

[Consul W. A. Bickers, Hobart, July 27.]

The city of Hobart will be in the market soon for large quantities of material for water mains, as a result of the construction of various works required to make a new reservoir at Ridgeway available for use. While it will be some time before a decision will be reached concerning the sizes and kinds of pipes to be adopted, manufacturers would do well to send quotations as soon as possible, since by the time they can be received in Tasmania the city authorities will probably be ready to purchase the material.

Local buyers prefer price quotations c. i. f. Hobart, but if difficulty is experienced in this, prices c. i. f. Sydney or Melbourne should be given. All quotations should be directed to the "Water and Sewerage Committee," Hobart, or to J. C. Ross, City Engineer, Hobart.

[The complete report by Consul Bickers, containing a detailed account of this work written by the city engineer, will be loaned upon application to the Bureau of Foreign and Domestic Commerce. Refer to file No. 65205.]

CONTRACT FOR STEEL BRIDGE IN CANADA.

[Consul General Frederick M. Ryder, Winnipeg, Manitoba, Sept. 3.]

The contract for building the superstructure of the railway bridge over Smoky River, Alberta, for the Dominion, Dunvegan & British Columbia Railway has been awarded to the Dominion Bridge Co., Ltd., and the material will be fabricated in this company's Winnipeg establishment, which is one of the largest and best equipped west of the Great Lakes. The bridge will consist of two 86-foot deck plate girder approach spans, six 120-foot deck spans, and one 125-foot through truss span which will span the main channel of the river, the steel in the superstructure weighing nearly 1,200 tons. This is one of the most desirable bridge contracts ever given out in the west. The concern has only recently completed the erection of a similar bridge for this railway over the Athabasca River.

BUSINESS OUTLOOK IN COSTA RICA.

[Special Agent Garrard Harris.]

Information has just been received which indicates that the business outlook in Costa Rica is now much more favorable than for some time past. Neither the drought nor the invasion of locusts which had been feared have occurred, and trade has recovered in large measure from the demoralization that followed the outbreak of the war. It is a favorable time for American exporters, who are in position to offer moderate lines of credit to houses of established responsibility, to secure permanent and desirable customers.

AUSTRALIA NEEDS GRAIN SACKS.

American manufacturers of cotton bags have become interested in supplying for export containers for Central American coffee, Cuban sugar, etc. An opening seems to be created by the diversion of jute and hessians for war purposes. American cotton bags might readily take their place. The Sydney Herald of August 14 calls attention to the need for grain sacks to handle Australia's record wheat crop, the statement reading:

At Tuesday's meeting of the jute trade, held in the chamber of commerce, it was resolved "That the jute trade of New South Wales protest against any Government interference in the matter of the supply of corn sacks, as the trade will provide all the sacks which are necessary for the coming harvest." The resolution is reassuring, more especially as Mr. Fisher, in his budget speech, estimates that the land in the Commonwealth sown to wheat this year is approximately 13,500,000 acres. On that acreage a 10-bushel to the acre crop would amount to 135,000,000 bushels and would require 150,000 bales of sacks to bag it, while an 8-bushel to the acre crop would total 108,000,000 and would take 120,000 bales of sacks to deal with it. A cablegram received yesterday from Calcutta, however, stated that Indian exporters estimated that Australia had bought only 100,000 bales and that stocks in second hands were not large and probably did not amount to more than 3,000 bales or 4,000 bales. The market was firm and buyers of September shipment were offering 7s. 3½d. (\$1.77) c. i. f. Mills had retired pending the final arrangements with regard to the British Government's requirements of war bags. In view of the assurance given by the Sydney merchants, the Calcutta estimate is most interesting. There was a fair demand yesterday for sacks, and prices were generally unchanged. August-September shipment was offered at 7s. 4d. (\$1.78) ship's slings and at 8s. 4½d. (\$2.03) net to rails. Three parcels of September shipment, totaling 250 bales, were sold to Melbourne houses at 7s. 4d. (\$1.78) ship's slings, Melbourne. A quantity of July shipment was cleared to a Sydney buyer at 7s. 2d. (\$1.75) slings. The woolpack market continued extremely weak. Spot stocks were to be had at 2s. 10d. (\$0.69) net, while supplies ex the steamer now discharging were offered and sold at 2s. 9d. (\$0.67) net to rails. There was no inquiry for bran bags, and a parcel could have been secured at 7s. (\$1.70) net to rails.

WHEAT PRICES IN SASKATCHEWAN.

[Consul John A. Gore, Regina, Saskatchewan, Canada, Sept. 3.]

The harvesting of wheat, the principal product of this Province, is progressing satisfactorily, the weather being clear and cool. About 75 per cent of the wheat grown in this Province has already been harvested, and thrashing has commenced. A few cars of new wheat have gone forward on the price basis of about 95 cents per bushel, f. o. b. Fort William, Ontario, the eastern wheat shipping port for western Canada, thus yielding to the shipper a net price of about 83 cents per bushel in Saskatchewan. The estimated production for this year's crop is calculated at 123,000,000 bushels for the entire Province.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 923 Alaska Building. HEARING ON CONFECTIONERY "COUNT" GOODS.

A public hearing will be held in Washington on October 9 by the United States Bureau of Chemistry upon the subject of the marking under the net-weight amendment to the Food and Drugs Act of the quantity of the contents, when in package form, of that class of confectionery known in the trade as "count" goods. The hearing will be held at 10 a. m. October 9, 1915, in room 427, Bieber Building, 1358 B Street SW.

CRUDE-OIL SHIPMENTS FROM MEXICO.

[Vice Consul Thomas H. Bevan, Tampico, Sept. 1.]

More crude oil was shipped from Tampico, Mexico, to United States ports during August this year than during any month since January, 1914. This increase is due largely to the ever-increasing demand for Mexican oils. During August 1,281,593 barrels were shipped to United States ports and one shipment of 70,444 barrels went to Balboa, in the Canal Zone, making a total of 1,352,037 barrels. During the same month last year 680,042 barrels were shipped to the United States, which is very little over a half of this amount shipped during last August.

Of the amount shipped to United States ports during August, 181,199 barrels went to Sabine, Tex., 180,274 to Galveston, Tex., 173,092 to Baltimore, Md., 167,000 to New York, N. Y., 136,424 to Port Arthur, Tex., 98,215 to Lynchburg, Tex., 87,382 to Port Tampa, Fla., 66,757 to New Orleans, La., 49,986 to Freeport, Tex., 36,718 to Providence, R. I., 36,546 to Port Aransas, Tex., 25,000 to Warner, N. J., 24,000 to Norfolk, Va., and 19,000 to Texas City, Tex.

Since the first shipment of oil from Tuxpam made by the Penn-Mex Fuel Co. on March 26, 1915, this company has moved its general offices from Tampico to Tuxpam and started shipping oil on a large scale. Owing to the fact that this oil is loaded at sea through 8-inch sea-loading lines, the tankers can load to their maximum

capacity, which gives a great advantage over Tampico, as ships here can load only to 21 or 22 feet, according to the discretion of the pilot, and must sail on high tide. The companies loading oil from Tuxpam also escape the payment of bar dues, which at Tampico amount to 10 cents Mexican gold per metric ton, which is equivalent to 5 cents American currency.

The Penn-Mex Fuel Co. during August shipped from Tuxpam 221,488 barrels to New York and 110,410 barrels to Baton Rouge, La., besides one shipment of 48,500 barrels to Campana, Argentine Republic.

The Compania Mexicana de Petroleo "El Aguila" S. A. made the following shipments from Tuxpam to United States ports during August: 142,305 barrels to New York; 236,837 to Philadelphia, Pa.; 58,456 to Baltimore, Md.; 61,608 to Galveston, Tex.; and 28,000 to New Orleans, La. In addition, a shipment of approximately 100,000 barrels was made to Rio Janeiro, Brazil, and 360,000 barrels to the company's refinery at Minatitlan, in the State of Vera Cruz.

The total amount shipped from this consular district to United States ports during August amounted to 2,211,091 barrels, of which 1,352,037 went from Tampico and 859,054 from Tuxpam.

GERMAN METHOD OF CIRCULATING SAMPLES.

[Consul W. Roderick Dorsey, Tripoli, Libya, Aug. 10.]

A German exporter of brushes employed a practical and economical method of supplying samples for the use of his representatives in this part of the world before the war.

At intervals the local agent would receive a case stocked with specimens numbered to correspond with quotations in the company's price list. These he was requested to use in booking orders, to keep them as long as necessary to canvass his clients, but not to detain them unduly, and then to forward them at manufacturer's expense to an agent in some near-by port.

The local representative found it easier to sell from these samples than by catalogue, the customer had the satisfaction of seeing what he was buying in advance, and the exporter with but a modicum of the expense of a visit from a commercial traveler had given, approximately, the same service. Having become familiar with the line through samples clients placed further orders by numbers and were shown new designs when exporter and agent thought it wise to send the sample case around again.

ACTIVITY IN CUBAN SUGAR INDUSTRY.

[Special Agent Garrard Harria.]

On a recent visit to a large machinery manufacturing plant it was learned that they were running 24 hours a day, turning out sugar-mill equipment for Cuba. Most of this is of the first grade, and represents heavy investments, and the concern has more orders than it can fill. It is stated that the antiquated machinery in many Cuban centrals is being very generally replaced with up-to-date makes, while some new mills are being opened. Business is excellent, and a general feeling of optimism prevails.

CONDITIONS IN BRADFORD WOOL MARKET.

[Consul Augustus E. Ingram, Bradford, England, Aug. 19.]

A meeting of the Wool Trade section of the Bradford Chamber of Commerce has recently been held to consider the difficulty which has arisen in connection with the accumulation of wool. It is said that the storage capacity in Bradford is already filled and that the situation is aggravated by the inpouring of the British clip. At Hull there is room, in the King George Dock, for probably 10,000 bales. At Manchester the Ship Canal Co. is said to have storage capacity for 60,000 to 70,000 bales, and it is reported that if Bradford importers and traders will guarantee a portion of their business for two or three years the canal company will provide all the necessary accommodation the West Riding of Yorkshire needs.

At the meeting of the Chamber of Commerce it was stated that motor haulage was obtainable for bringing wool from Manchester to Bradford at a rate lower than railway charges, and it seems as if Manchester at present offers the best solution. The erection of a large public warehouse at Bradford, owned and controlled by the municipality, has been suggested, and it is believed by many that it would be a paying enterprise.

In regard to the general trade, the fashions for women's suitings for the autumn are said to be very largely of a plain character, blue serges predominating. The demand for men's suitings has been chiefly for plain cloths in blues and grays. The local press reports the sale of a large amount of American serges for women's wear, and states that never before in the history of the trade between the two countries has anything like this quantity of piece goods been shipped from the United States to England.

BIG GAIN IN CANADA'S SALES TO UNITED STATES.

[Consul Henry S. Culver, St. John, New Brunswick, Sept. 8.]

Canada's trade with the United States for the three months ending with June, 1915, showed an increase, according to the latest available statistics, of \$34,746,172 over the corresponding period in 1914. Imports from the United States had a value for the quarter under review of \$71,840,407, or \$12,319,287 less than in April-June of the preceding year; but the gain in exports from the Dominion to the neighboring Republic (the value rising from \$41,642,980 to \$88,708,439) was sufficient to offset this decline and give a net increase, as stated, of \$34,746,172.

From all countries Canada imported goods to the value of \$99,794,976 in the three months ended June last (\$128,843,347 worth in the second quarter of 1914), and exported to all destinations \$172,851,892 (\$84,265,048 in 1914). During the same period the trade of the port of St. John totaled: Imports, \$2,041,025 (\$2,493,364 in April-June, 1914); exports, \$24,455,626 (\$5,661,320 in the corresponding quarter of last year).

In the first six months of the current year the United States furnished 14.2 per cent of the total imports (exclusive of specie and Government stores) into the Union of South Africa, contrasted with 9.3 per cent in January-June, 1914.

COMMERCIAL FUTURE OF THE OSTRICH.

[Consul E. A. Wakefield, Port Elizabeth, South Africa, Aug. 8.]

A question under serious consideration by farmers and produce merchants of this district is the commercial future of the ostrich industry. While opinions are naturally very divided, there is no questioning the fact that the present outlook is anything but favorable.

About two years ago ostriches and feathers reached the highest values generally since the ostrich has been domesticated for feather production. On one occasion prize feathers sold in the Port Elizabeth market at about \$550 per pound. Prize feathers are those taking first prize at the annual show of the Port Elizabeth Agricultural Society, and the extreme prices obtained are based upon sentiment and are not to be considered as representing real values. Fancy breeding birds have sold at \$10,000 per pair.

Present Values.

This market is again depressed after a slight revival lasting two or three months. At present prices, or anything approximating them, the ostrich is not a paying proposition. While the local market has shown spasmodic signs of renewed activity, there has been no real demand except from America.

As accumulated stocks and recent pluckings were placed on the market in large quantities, this demand was soon supplied, and for the last two weeks sales have practically ceased. The prices to-day are about as low as they ever have been and are away below the cost of production.

Present prices for good-grade, unsorted wing feathers range from \$14.50 to \$19.50; low-grade, unsorted wings, \$6 to \$12; tails, \$1.20 to \$3.10; body feathers, 75 cents to \$2.50. It should be remembered that the prices quoted are for unsorted parcels only. Unsorted parcels consist of pluckings taken from the particular portion of a bird designated (wings, tails, or bodies) and placed on the market without being sorted or separated into their various grades.

Cost of Production.

It has been estimated by experienced feather producers that the ostrich which is kept on lucerne grounds, fed with corn when necessary, and carefully looked after in other ways must produce \$20 at each clipping in order to pay an ordinary profit on the money invested.

The ordinary veldt ostrich, which is required to find its own food on the veldt and in the bush with herd-boy supervision, should produce \$7.50 per plucking. Birds are plucked three times in two years.

Great Decrease in Birds.

The principal ostrich sections of South Africa have recently been afflicted by a most severe drought, which has caused a serious shortage of food and water. As the prevailing feather prices during the past year have been too low to pay for feeding ostriches, many farmers have given them no attention whatever. All available lucerne was bought up by the Government for use during the campaign in German Southwest Africa at remunerative prices. The present winter (June and July) has so far been the coldest for many years.

In addition to all these drawbacks there has been little breeding during the last year or year and a half. As a result of drought,

lack of food, neglect, and cold weather it is estimated there are to-day only one-half as many birds as there were one year ago. Such a statement would ordinarily seem incredible. It was repeated so frequently that this office started a personal investigation of near-by sections.

From inquiries made it seems almost certain that of the 800,000 or more birds which ostrich farmers owned not more than one-half are alive to-day. Not only does this seem to be the case, but as it takes three years for an ostrich to reach full maturity for plucking purposes (they are, of course, previously plucked for "chicks" and "spadonnas"), there is no prospect for any increase in numbers.

Present Feather Stocks—Advertising Project.

There are considerable stocks now held in London which were purchased a year or more ago, just prior to the slump in prices, and have been held ever since in anticipation of a return to former high prices. Naturally these feathers are not improving in condition. There are fairly good stocks in New York, part of which are already sold, and the balance are being marketed with reasonable dispatch. Stocks here are unusually low (there are ordinarily heavy stocks here throughout the year), and most of those which have been held back for months by the farmers were sold during the recent market sales.

At a recent farmers' association meeting one of the proposals for placing the feather trade upon its former basis was for the Government to impose an export duty of 25 cents per pound upon ostrich feathers until \$100,000 or more had been raised, which was to be expended in advertising feathers. There is little probability of any such proposition being adopted.

Port Elizabeth exports and comparative prices follow:

Year.	Pounds.	Value.	Average price per pound.
1913.....	510,864	\$7,314,500	\$14.00
1914.....	386,257	3,213,400	8.40
1915 ^a	274,996	632,000	3.40

^a Five months only, January, May, inclusive.

Future Production—American Trade.

While the present disturbed state of affairs lasts it may be that the present supply will be sufficient to meet the demand for a time. If the decrease in birds has been greater than stated—according to some claims this is the case—or if the same policy of neglect is continued, there may be a tremendous shortage in ostrich feathers in the near future.

This season's pluckings will demonstrate the present productive possibilities better than any theory. Just now neither producers nor dealers are anticipating anything like normal stocks as regards quantity. The quality is expected to be of fair average.

Direct shipments to the United States have been slowly but steadily increasing in proportion each year and should be encouraged in every possible way. In all such shipments the European middleman is eliminated, his grip on the market is weakened, and direct trade export and import is benefited.

AUSTRALIA'S WOOL TRADE FOR NEW SEASON.

[Sydney Morning Herald, Aug. 7.]

The outlook for the 1915-16 wool-selling season is bright, and everything points to a period of record high prices. Some go so far as to assert that before the close of the season "boom prices" will prevail. This year's clip will be a short one, and it is estimated that the shrinkage in production will amount to anything up to 20 per cent compared with last year's outturn. [See **COMMERCE REPORTS** for Aug. 23 and Sept. 4, 1915.] The drought in the Riverina and the northwest has been very severe and the losses of sheep considerable. In addition, it must be remembered that in all probability only workable wool will be marketable, as until the carbonizing works of Belgium and France are reestablished hurry descriptions will be of little use.

Another factor will be the great scarcity of lambs' wool. Reports indicate that from some centers not a bale of lambs' wool will come forward; and should this prove to be the case the blanket and other manufacturers, who usually take lambs' wool, will be forced to operate on ordinary free wool. In short, with the strong demand which exists in the United Kingdom, together with the growing requirements of the United States, Japan, Russia, France, Italy, and our own Australian mills, operators look forward with every confidence to the opening of the season in Brisbane on September 6.

The New Clip—Control of Supplies.

The new season's clip is beginning to filter slowly into the Sydney stores, but as many sheds did not start shearing until weeks and even months later than last year, some time must elapse before the new wool commences to arrive in any quantity. None of the new wool will be available for sale by private treaty. Instead, it will be held for the opening of the Sydney auctions on September 13.

We agree with the Stock and Station Journal that the difficulties which appeared almost insuperable last season were surmounted very largely as a result of the policy of feeding the market as closely as possible to the margin dictated by the buying capacity of operators, and it would seem that there is just as much, if not more, need now for a careful policy to be formulated in connection with the coming season. Prices are admittedly on a high level, and if wool is rushed on the market indiscriminately it will mean the imperiling of values. The slow, gradual, selling policy of the past season is still the correct attitude for selling brokers to adopt under the peculiar circumstances of the moment.

It is impossible to say what the war developments of the next six weeks will be, but it is not likely that the position will be changed sufficiently to alter the existing demand for wool, and our main customers will probably again be the Bradford buyers, with American and Japanese assistance. That being so, the season must necessarily be another long-drawn-out one, with quantities regulated in keeping with the demand. There will doubtless be much less wool shipped for sale this season, because the element of panic has gone, and the machinery of the trade is moving all the time. There is not likely to be any complete stoppage of sales, so that owners can rest assured of their produce finding a market locally in its proper order

of arrival. Owners must, however, play their part in the proper spirit, and recognize that to adopt the selfish policy of rushing the sales irrespective of the future will jeopardize what should otherwise be a very strong position. The common interests of wool-growers demand that there shall be no departure from the common-sense policy which has achieved such splendid results so far.

Trade Journals Advocate Embargo on Tops.

In view of the unprecedented demand for Bradford tops several of the British trade journals have suggested that the exports of tops from Australia to Japan should be prohibited and the shipments diverted to Great Britain. Thus in a leading article in the *Wool Record*, published at Bradford, the proposal is not only put forward, but urged strongly. "Australia is our own country," says the *Wool Record*; "it has done much for us and can do much more. It is to our interest also to help Australia, and it ought to be seen what the Commonwealth can do for us before we turn to neutrals to buy. England has practically prohibited merino-top exports, because they are all wanted here. Why can not Australia top exports be forbidden except to England? Bradford must have more fine tops. Combing machinery can not turn out any bigger weight; therefore they must be bought from somewhere. Shall Bradford be Australia's customer or that of a neutral?"

The matter is further discussed by the *Wool Record* in its market report:

The uppermost question in the Bradford trade is to obtain a greater supply of tops. Until there is a greater supply prices are not likely to fall a great deal, if any. There are several spinners who have standing machinery, and certainly they would regard an adequate supply as a real godsend. Practically every spinner in the trade is in urgent need of fine tops, and some are held up for want of them. Can not the board of trade take the matter up and direct what Australia is producing to this country? Those who are the best informed candidly state that the combing difficulty is getting worse week by week. We therefore put the question fairly to our readers, as well as those in London, by saying that Australia to-day is producing 4,000,000 pounds of fine tops, all of which are being shipped to Japan. Our Far Eastern ally is not nearly so hard up for tops as England, France, and Russia, and if Australia's output were diverted even for four months to the United Kingdom it would relieve a very acute situation. This can only be done, in our humble opinion, by an embargo being placed upon the export of tops to Japan from Australia, and this can easily be done by our own board of trade acting in conjunction with the Commonwealth Government. This would relieve from October to December at least many a spinner who would gladly pay a current price for merino tops.

Renewal of Federal Bounty on Tops Under Consideration.

Since 1908 a bounty has been paid upon the manufacture of wool tops in Australia, the amount expended by the Commonwealth between that year and 1914 being £56,545 (\$275,175). In the report recently furnished by the Interstate Commission it was stated that the greater portion of this amount had been paid to Messrs. F. W. Hughes & Co. (Ltd.), of Botany. The bounty expires on December 31 of this year, and it is now a question of policy with the Minister for Customs (Mr. Tudor) whether he will recommend to Parliament that it should be renewed for a further period. Mr. Hughes has, during the last few days, waited upon both the Federal attorney general (Mr. Hughes) and Mr. Tudor.

A report on wool tops recently issued by the Interstate Commission included a recommendation directly opposed to the renewal of the

bounty. Another recommendation made by the Interstate Commission was that the protection on woolen yarn should be raised to 10 per cent preference and 15 per cent against the foreigner (the duties now collected are 5 and 10 per cent, respectively). Referring to the matter to-day, Mr. Tudor, while not indicating his intention on the point of renewing the duty, said that he was strongly in favor of promoting the establishment of wool spinning in Australia.

JAPANESE ENAMELED WARES.

[Extract from Japan Advertiser of July 16, by Consul General George H. Schömer, Yokohama.]

The imports of enameled iron wares into Japan is decreasing on account of the progress made in the home-made goods. The largest amount imported was in 1908, when \$35,358 worth was shipped in. But the figures have gradually fallen every year, and the amount of import in 1914 was only \$12,450.

As to the home-made enameled wares, it is explained that they were formerly inferior in workmanship and were for the most part table or cooking wares. It is said that the ware was injurious to public health. The Department of Agriculture and Commerce therefore bought German machinery for the manufacture of the goods about eight years ago and rented them to the Kuwana Enameled Wares Co. This encouraged the manufacture of superior goods. Later on, the Nippon Enameled Wares Co. was established in Osaka, and a number of similar factories have sprung up since then in various parts of the country. The enameled goods now manufactured in these factories are said to be as excellent as German-made goods. The following is a list of the main factories now in existence:

The Enameled Wares Co., Kuwana; the Nippon Enameled Wares Co., and Wada Sohauhi & Co., Osaka; the Tokyo Enameled Wares Co., the Kiyosu Co., Otsuka Jukichi & Co.; the M. I. & Co.; Igarashi & Co.; Nakamura & Co.; and the Nippon Hard Enameled Wares Co., of Tokyo.

No exact figures as to the amount of production of all these factories are obtainable for the present, but it is certain that the industry is making such progress that there will be no more necessity for importing them in the near future. The kinds of goods now being manufactured include for the most part washing basins, rice boilers, tiffin boxes, spoons, pans, name and signboards, indicators, clocks, medical apparatus, plates, and tea-kettles. The Osaka makers are inclined to make goods of larger size and the Tokyo ones those of smaller size.

CHINESE NATIONAL EXPOSITION IN PEKING.

The Chinese Government has undertaken to open an Exposition of Home Products in Peking on October 10, 1915. While domestic articles will be of first importance, the new Chinese Commercial and Industrial Commission has been endeavoring to get foreign firms also to make exhibits which would show to the Chinese the advance made by other countries in commercial and industrial enterprises.

EMBROIDERY INDUSTRY OF TERCEIRA.

[Consul Walter H. Schulz, St. Michael's, Azores, Aug. 16.]

Among the limited industries of the Azores none seems to enjoy better prospects and none has shown greater growth in recent years than the embroidery industry of Terceira, established in 1898 by Otto von Streit. This industry is now employing about 3,000 women and children. The Von Streits are also largely interested in Madeira embroideries and, it seems, were first to appreciate the possibilities of Terceira in this particular field. Since their advent four other Madeira firms have established similar manufacturing agencies in Terceira. Embroideries to the value of about \$100,000 are manufactured and exported annually.

It is said that less than \$50,000 is invested in the industry. No machinery is used; all work is done by hand in the homes. [The attempt to introduce embroidery machinery in Madeira and the subsequent failure of the movement were noted in Daily Consular and Trade Reports for Dec. 24, 1913, and Jan. 19, 1914.] The cotton and linen fabrics are imported from England and Germany, the cotton from the former and the linen from the latter country.

Bright Future for Terceira Wares.

It is hoped that, like Madeira, Terceira will sooner or later have its entire female population engaged in the embroidery trade. The fact that Madeira capital is solely interested in the enterprise would suggest the high estimate placed upon Terceira workmanship and the possibilities of the trade. Undoubtedly the cheap labor obtainable at Terceira had much to do in attracting the Madeira operators. The women and children engaged do piecework and receive less than 12 cents a day for their labor.

In recent years nearly half of the entire product has been exported to the United States, and, there is reason to believe, was retailed there as Madeira goods. [In 1913 the declared value of the embroideries invoiced at the St. Michael's consulate and the agency at Terceira for shipment to the United States was \$41,623; the abnormal conditions prevailing in 1914 reduced these shipments to \$19,146 worth in that year.] About \$20,000 worth is sent to Germany annually, \$5,000 worth to Canada, and \$10,000 worth to Madeira, whence it is reexported. The chief articles of manufacture are embroideries suitable for dresses, towels, napkins, handbags, and handkerchiefs.

It is generally admitted that in quality some of the Terceira articles are equal to the Madeira product, but as is a general thing the finest grades of work are not attempted. Terceira prices are at least 10 per cent cheaper than those of Madeira. That the embroidery made at Terceira, however, is gradually attaining that degree of perfection known at present only to the Madeira product is generally conceded, and it is because of this that a bright future for the industry is anticipated.

A London coal expert thus estimates the cost of "Warwickshire house coal" to the British consumer: Price at mines, \$3.89; freight to London, \$1.52; cost of distribution, \$0.97; merchant's profit, \$0.91; or a total of \$7.29 per ton of 2,240 pounds.

AMERICAN COAL AT THE PORT OF ROUEN.

[Consul Albro L. Burnell, Rouen, France, Aug. 11.]

The European war has reduced the usual sources of coal supply for France almost exclusively to those of Great Britain, and the coal receipts even from the British Isles are at present controlled by abnormal restrictions.

Existing conditions seem to favor the importation of American coal to meet pressing needs and incidentally lay a foundation for sales after the war. Although it is said that any kind of coal can be profitably marketed in France at present, the object of this report is primarily to encourage the establishment of a permanent trade in American coals, which, meeting as nearly as possible the qualities and grades of long-used and competing coals, will by trial under existing necessities demonstrate their adaptability for both present and future consumption.

Only One American Cargo in Recent Years—Quantities Imported.

It has come to the attention of this consulate that a cargo of very hard American anthracite was shipped to Rouen some years ago, which could not be sold here because of its extreme hardness, and which lay for months in stock until a coal strike in the United States offered an opportunity there for its sale at a good profit to the owner. Except for this instance, it is believed that no American coals have been put on this market in recent years, at least.

The importation of coal at the port of Rouen during 1914 amounted to 3,312,000 tons (ton=2,000 pounds), or 137,191 tons more than that of 1913 and about 2,425,000 tons more than a year's importation of 15 years ago. Coal imports of the first six months of the current year amounted to 3,037,783 tons, or 1,101,792 tons more than in the corresponding period of last year.

Before the outbreak of the war considerable quantities of coal were introduced from northern France and Germany, as well as from Great Britain. The coal supply then, as now, was for large industrial and domestic needs of this region and for distribution by the River Seine and its branches, canals, and railways to Paris and other interior cities of the country.

Draft of Vessels—Accommodations of Quays.

The draft of vessels that may enter the port of Rouen is as follows: 17 feet during the entire year; 18 feet during 350 days; 19 feet during 319 days; 20 feet during 265 days; 21 feet during 205 days; 22 feet during 148 days; 23 feet during 86 days; 24 feet during 19 days.

Coal vessels from Great Britain generally bring from 1,500 tons (metric ton=2,204.6 pounds) to 3,000 tons, although a few vessels bring from 5,000 to 6,000 tons, of coal.

The quays can accommodate about 60 vessels at any one time, and 8 vessels at a time may find moorings at the entrance of the harbor, for discharging cargoes.

Cranes at the Port—Freight Rates—Customs Duty.

The port has 40 electric and hydraulic and about 80 steam-operated cranes. The steam-operated cranes are located on pontoons. A few of the floating cranes have a capacity of 3 to 4 metric tons, and two of them have a capacity of 7 tons. The electric and hydraulic cranes

belong to the local chamber of commerce, which is in charge of the management of the port. The chamber of commerce recently decided to acquire six new electric cranes with automatically operated grab buckets, each of 4,000 kilos (8,818.4 pounds) capacity, in view of the increased merchandise tonnage of the port, and particularly for the discharging of coal. The floating cranes are the property of private concerns. At present about 19,000 metric tons of coal are being discharged daily. The cost of discharging coal is now about 2 francs per metric ton.

Prevailing freight rates on coal to Rouen from Newcastle, England, and region, are about 15s. (\$3.65), and from Cardiff, Wales, and region, from 12s. 6d. (\$3.04) to 13s. (\$3.16) per ton.

The duty on coal is 0.12 franc (\$0.02316) per 100 kilos (220.46 pounds) for direct imports; a surtax of 3.60 francs (\$0.6948) is levied on indirect imports of articles not specified (including coal).

The local buying season for coal is from May to October, while the slack season is from January to April. It is believed that Pittsburgh coals would meet local requirements, but they should be shipped as classed coals.

[Consul Burnell transmitted with this report a very complete statement concerning the kinds and classes of coal used at Rouen, their approximate degrees of volatilization and sizes, as well as tables of pilotage charges, port charges, and dues, and a specimen copy of a local ship broker's account of disbursements and charges on the entry and clearance of a steamship laden with 3,160 metric tons of coal. This material will be loaned to interested persons by the Bureau of Foreign and Domestic Commerce. Refer to file No. 65334.]

SUMMARY OF EARNINGS OF GERMAN STOCK COMPANIES.

[Consul General H. W. Harris, Frankfort on the Main, Germany, Aug. 23.]

The Frankfurter Zeitung recently printed a brief summary of earnings of 3,788 German stock companies the business statements of which were made public from August 1, 1914, to June 30, 1915. These statements are referred to as throwing some light on general business conditions. The combined capital stock of their corporations is given at 13,670,000,000 marks (\$3,253,000,000). The concerns showed a net increase of capital stock for the year amounting to \$95,000,000. The total amount written off for depreciation of plants, etc., was about one-half of 1 per cent more than during the preceding business year.

Net profits, as would be expected, showed a falling off, though it is said that under existing conditions the results were highly satisfactory. The average net earnings of the 3,788 concerns are said to have been 11.18 per cent, as against 13.64 per cent during the preceding business year. The average dividend declared was 6.65 per cent, as against 8.86 per cent for the preceding year.

Guadeloupe Has Good Crops but Few Laborers.

The coming sugar crop on the French West India island of Guadeloupe is promising. Vice Consul J. O. Florandin, however, reports a probable shortage of labor, as most of the men are recruited for the French Army. The coffee, cacao, and vanilla crop prospects are also bright in Guadeloupe.

NEW ZEALAND TRADE AFTER A YEAR OF WAR.

[Consul General Alfred A. Winslow, Auckland, Aug. 3.]

On a review of general trade conditions in New Zealand during the first year of the war, it seems clear that this country has been disturbed less than almost any other part of the world, and banking and mercantile interests seem very optimistic. Banks are well supplied with cash, the deposits and balances being larger than for several years and, in some cases, than ever before, and interest rates are about the same as 12 months ago.

Statistics of Foreign Business.

The foreign business of the country has been satisfactory, with an increase in exports and a decrease in imports, as is shown by the following from the New Zealand Herald:

As regards exports, New Zealand has been an undoubted gainer by the war, as statistics show. The exports for the 12 months ended June 30 last were valued at £26,289,705 (\$127,938,849) compared with £24,582,276 (\$119,629,646) during the previous season, an increase of £1,707,429 (\$8,309,203). Import figures are only available for the year ended March 31 last. They were £20,350,229 (\$90,034,389), as compared with £22,309,679 (\$108,570,053) for the previous 12 months, a decrease of £1,959,450 (\$9,535,663). [Conversions in this report have been made at the rate of \$4.8665 to the pound.]

Readjustment of Trade Conditions.

During the year a marked readjustment of the importing business has been brought about, and it is felt that more is to follow. The European supplies are growing less and less, and New Zealand is depending more and more on American imports, supplemented by Canada and Japan. In commenting on this phase of business the New Zealand Herald has the following to say:

In the meantime importers looked elsewhere for supplies formerly obtained from the Continent and difficult to procure from England, and gradually began to obtain them from Australia, Canada, and America. At present traders are described as being in a better position to cope with a general demand than they have been since the war began.

Economy Practiced—Comparative Neglect of Expensive Articles.

The public in general seems to have grasped the situation early, and has been practicing economy until but little is now spent for luxuries as compared with former times. This augurs well for the future. The New Zealand Herald says concerning the economies practiced and some conditions now existing:

While jewelry and fancy goods are less sought for, necessities are selling freely in cheaper classes of goods to the comparative neglect of high-priced articles. Drapers anticipate even greater difficulty in securing supplies, as home manufacturers are engaged in making war clothing, putting aside the regular trade. As to hardware, a most serious condition has arisen, owing to the scarcity of all galvanized goods. Fencing wire and corrugated iron are selling at more than double the usual prices. This rise and scarcity, however, is not felt so much as might have been the case, owing to the slackness in the building trade.

The Outlook—America's Opportunity.

The outlook is good for a reasonably prosperous period in this Dominion, and it would seem that American interests are likely to get the greatest benefit if they will but reach out after it. The shipping facilities are much better now than a few months ago, although

freight rates are high. During the past week two steamers have arrived from the Atlantic coast of the United States through the Panama Canal, loaded with American goods for New Zealand and Australia, and two are due this week with a total tonnage of 25,000. It is now reported that a new line is to be put on between New York and Australasian ports. In reviewing the outlook the New Zealand Herald says:

Tradespeople, discussing the outlook after 12 months of war, look forward to a prosperous season. Producers are obtaining good prices, and markets are assured so long as the sea routes are kept open. The increased exports and the reduction in imports have combined in making money in the Dominion plentiful. Activity in the country during the coming season will assure a corresponding activity in the cities.

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he received in stock during the week ended September 11, the following new United States Government publications of a business character, which he will sell at the nominal prices affixed:

Converging Lenses, a new method of determining the focal length of, Standards Bureau Scientific Paper 110; price, 10c.

Gas Manufacture, a bibliography of the chemistry of. Mines Bureau Technical Paper 120. A list of books relating to the various branches of gas manufacture; price, 5c.

Tests of Packing Boxes of various forms, Forest Service Circular 214, reprint. Covering material tested, methods of tests, results, with information on nail, wire bound and dovetailed boxes; price, 5c.

Public, Society, and School Libraries in the United States, Education Bureau Bulletin 25, 1915, with combined statistics; price, 25c.

Foreign Students, opportunities for, at the universities and colleges in the United States, Education Bureau Bulletin 27, 1915. An extensive article on the organization of education in the United States and the opportunities offered to foreign students; price, 30c.

Toxicity to Fungi of Various Oils and Salts, particularly those used in wood preservation, Agriculture Department Bulletin 227. Covers experiments on destruction of fungi by oils and salts, especially relating to wood preservation; price, 10c.

Foreign Publications for Advertising American Goods, advertising rates, circulation, subscription price, etc. Miscellaneous Series 10, issued by the Bureau of Foreign and Domestic Commerce. List of advertising mediums in foreign countries arranged alphabetically by countries; price, 25c.

SIAMESE CROP PROSPECTS FOR SEASON 1915.

[Vice Consul Carl C. Hansen, Bangkok, July 27.]

According to the official crop report for the month of May, rice planting was in progress in 16 districts and covered 271,048 acres at the end of the month, as compared with 94,860 acres for 1914.

The rainfall had been fair and the young rice plants were in good condition in nearly all the various districts of the Kingdom, and therefore the general prospects for an average crop are good.

Cotton planting was in progress in May in 5 districts, and during the month 3,384 acres had been planted.

The pepper planting is being extended in the districts of Chanda-buri and Bhuket.

New coconut plantings have been made in Xumbora, Pattani, and Bhuket districts, and the young plants are reported as doing well.

COLOMBIAN MARKET FOR BAGS.

[Consul Ross Hazeltine, Cartagena, Aug. 4.]

Colombia offers an excellent market for fiber bags, which are used as containers for coffee, sugar, flour, tagua nuts, tannic extract, and ipecac. The greater part of this trade has been held by British manufacturers, who maintain traveling representatives in the field. Dundee manufacturers of bags have been especially enterprising and now supply most of the bags used in the coffee trade. Coffee is foremost among the exports and constitutes considerably more than one-half of the total.

During 1914 the imports of fiber bags and bagging (manila, jute, and hemp) into the port of Cartagena were: From Great Britain, \$69,141; Germany, \$5,696; United States, \$1,901; all others, \$35,769; total, \$112,507. The imports for previous years are not available.

Paper bags are not extensively used, except by the best stores in the retail trade. During 1914 the imports of pasteboard and paper bags (so classified in the customs statistics) amounted to: United States, \$3,351; Germany, \$1,367; all others, \$907; total, \$5,625.

Import Duties—Necessity of Sending Traveling Salesmen.

The import duties on paper and fiber bags are:

Item 1319. Paper bags with or without printing, per kilo (2.2 pounds), \$0.03.

Item 1468. Cotton bags, glazed, or of oilcloth, per kilo, \$0.10.

Item 1526. Bags of Manila hemp, coco, jute, ixtle, etc., per kilo, \$0.01.

Item 1492. Bags of hemp, ramie, and similar fibers, tarred or not, with or without paper, and cloth for packing or making bags, etc., per kilo, \$0.01.

Cotton bags are used exclusively by the flour mills. They are generally purchased with printing in Spanish.

Owing to the fact that practically all the coffee exports are shipped to the United States, it would seem that American manufacturers of bags should be able to obtain a much larger share of this trade. However, it will be absolutely necessary to cover the field with travelers, as the British manufacturers are doing. During the past year the local importers of cotton and fiber bags have received two or three visits from European travelers and none from representatives of American manufacturers.

It is practically certain that American traveling salesmen could obtain surprising initial results. The cities of Cartagena, Barranquilla, Santa Marta, Medellin, and Bogota all offer promising opportunities in this line.

The largest local importer buys in large quantities at close margins for cash. It is probable that some of the other firms would make purchases on cash terms.

Correspondence in Spanish—Steamship Service.

Correspondence should always be in Spanish with local firms. Prices may be quoted in American currency. Weights should be set forth in kilos. There is a direct steamship service (American) from New York City to Colombian ports, with weekly sailings. Goods

may also be shipped from New Orleans on through bills of lading, with transshipment at Cristobal or Colon.

[A list of importers of bags and bagging at Cartagena may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65158.]

BURMA PREPARED TO SHIP ORCHIDS.

[Consul Maxwell K. Moorhead, Rangoon, July 31.]

The Agri-Horticultural Society of Burma, Kandawglay, Rangoon, is now in a position to collect and ship orchids to the United States. Owing to the alternating dry and wet and cool and hot seasons, the orchids should be collected during December and January and packed and dispatched from Rangoon during February. Orders should be received in Rangoon not later than November 15. The following orchids can be collected to order, the prices given being for 100 orchids: *Cypripedium bellastulum*, \$16.22; *Cypripedium parishii*, \$11.35; *Cypripedium spicerianum*, \$24.33; *Dendrobium crassinode*, \$16.22; *Dendrobium formosum giganteum*, \$12.97; *Dendrobium chrysotozum*, \$12.97; *Dendrobium fimbriatum*, \$9.73; *Dendrobium nobile*, \$16.22 to \$32.44; *Dendrobium thrysiflorum*, same; *Dendrobium dolhousianum*, same; *Dendrobium wardianum*, same; *Vanda coerulea*, same; *Vanda kimballianu*, \$9.73; *Vanda teres*, \$9.73; *Saccolabium blumei*, \$9.73.

These prices are for good plants. Extra selected specimens of some kinds will be more in proportion to size.

NEWS PRINT SHORTAGE IN ENGLAND.

Several English newspapers call attention to the growing scarcity of paper and notify their distributing agents to revise their orders to avoid "left overs." The United Kingdom in 1914 imported 296,000,000 pounds of newspaper on reels, valued at \$7,000,000, of which 5½ per cent came from the United States and nearly 40 per cent from Newfoundland; also 93,000,000 pounds of paper not on reels, worth \$3,500,000, of which 41 per cent came from Norway and 5 per cent from the United States. British imports of paper during the first half of this year fell off slightly. Increased purchases of American paper on reels was counterbalanced by a decrease in American paper not on reels. Full details of the British paper trade will be found in Special Consular Reports No. 73, "Paper and Stationery Trade of the World," for sale at 50 cents by the Superintendent of Documents, Washington, D. C.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 403 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

Dried or salt codfish, locally called "bacalao," annually imported by Argentina totals 12,000,000 pounds.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Tinplates, No. 18317.—A firm in Switzerland is in the market for tinplates to be used in the condensed-milk industry. Only the best steel coke tinplates are wanted as the boxes to be made therefrom are riveted, not soldered, and must consequently be very pliable. Better coated and softer tinplate is required for the riveting system than for the older system. The firm in question desires to make permanent connections with American manufacturers. Prices and samples are solicited.

Universal milling or cutting and grinding machines, No. 18318.—An American consular officer in Switzerland reports that a dealer in his district is in the market for universal milling or cutting and grinding machines manufactured in the United States. Catalogues and prices are requested, and also time of delivery. He desires to purchase a sample of the machinery first. References given. Correspondence should be in English.

Material for fancy boxes, celluloid, hinges, and snap locks, No. 18319.—A local manufacturer in Spain of fancy and novelty wooden, celluloid, and cardboard boxes is desirous of receiving samples and quotations from American producers of celluloid, small hinges, and snap locks. Quotations should be made, if possible, for goods delivered in Barcelona, and Spanish would best be used for correspondence. Samples and prices accompany this report and may be examined at the bureau or any of its branch offices. (Refer to File No. 65500.)

Umbrella ribs and frames, No. 18320.—An American consular officer in the United Kingdom reports that a well-established firm in his district is desirous of purchasing stretcher and broad stretcher umbrella ribs and umbrella frames of American manufacture. References given.

Machinery for utilizing bones in the manufacture of combs, buttons, etc., No. 18321.—A business man in Chile informs an American consulate that he intends to establish a factory for the manufacture of bone combs and bone buttons, and would like to communicate with American firms manufacturing machinery for the same. Correspondence and catalogues should be in Spanish or German.

Soda-water bottling apparatus, No. 18322.—A man in Central America has requested an American consulate to assist him in securing catalogues and prices on the following accessories for a small soda-water bottling plant: Engine and boiler, 5 to 10 horsepower, gasometer, and carbonator. Prices are preferred c. i. f. Anapala, but f. o. b. New York or San Francisco will be considered. Goods must be insured against breakage and damage. The terms of sale will be cash or the equivalent. Catalogues and correspondence must be in Spanish or German.

Lathes, accessories, and attachments thereto, No. 18323.—A business man in Switzerland requests an American consular officer to place him in touch with American manufacturers of lathes and accessories and attachments thereto. Catalogues and quotations indicating the lowest export prices are desired. References furnished. Correspondence should be in English.

Graphite, No. 18324.—A merchant in Japan informs an American consulate that he desires to sell graphite to American consumers. The graphite is packed in strong casks averaging six to the long ton, and freight at present to New York is about \$16 per ton of 2,240 pounds. The dealer is prepared to supply two or three tons per month for a period of one year. Samples of the graphite are in this country. Further information may be obtained from this bureau.

Coat hangers, cutlery, etc., No. 18325.—A firm in England reports that it is in the market for a quantity of cheap wooden coat hangers, steel cutlery, including knives, forks, penknives and scissors, and also alarm clocks. Manufacturers interested in these inquiries may obtain further information from this bureau.

Ready-made clothing, etc., No. 18326.—An American consular officer in Central America reports that a firm in his district desires to receive catalogues and prices, together with full information as to credit, etc., of men's furnishings and ready-made clothing. Correspondence should be in Spanish.

CUSTOMS RÉGIME AT TSINGTAU, CHINA.

[Chargé d'Affaires Post Wheeler, Tokyo, Japan, Aug. 18, 1915.]

An agreement was entered into by representatives of the Chinese and Japanese Governments on August 6, 1915, providing for the reopening of the Chinese Maritime Customs at Tsingtau in the leased territory of Kiaochow, which is now under Japanese military administration. The arrangements agreed upon are in all essentials similar to those in force during the German occupancy of Kiaochow. Among the former provisions which have been revived is one authorizing the Japanese Government to retain 20 per cent of the amount of import duties collected, the remainder to be turned over to the Chinese director of customs.

[A copy of the regulations formerly in effect is on file in the Bureau of Foreign and Domestic Commerce, and will be loaned to those interested upon application.]

ENORMOUS CROPS OF LEMONS.

Twenty thousand acres in young lemon trees in California will soon come into bearing and double the domestic supply. The crop for the year ended August 31, 1915, was 6,667 cars, or 132 per cent more than last year. These large increases in production will call for a serious study in marketing the lemon crop of the United States.

The California Fruit Growers' Exchange lemon shippers have organized a company to manufacture by-products from the lower grades of fruit. The plant is under construction and the business will be handled on a cooperative basis, the growers receiving the full returns for the by-products after the cost of operation is deducted. From one and one-quarter to one and one-half million dollars worth of lemon oil, citrate of lime, and other lemon by-products are imported annually into the United States. These products can be manufactured successfully in California from the lower grades of fruit that are not worth shipping, as well as from fruit that demoralizes the markets because of its inferior quality.

CONSTRUCTION WORK ABROAD.**CANADA.**

[Vice Consul G. C. Woodward, Vancouver, Canada, Sept. 3.]

British Columbia Building Permits.

The total value of the building permits issued in British Columbia during the first six months of 1915, as published in the Dominion Labor Gazette, amounted to \$1,413,276, as compared to \$5,948,047 during the same period of the previous year, showing a decrease of \$4,534,771. The following table gives the values according to the place of issue:

	1915	1914
Vernon	\$4,685	\$32,320
New Westminster	35,025	149,667
Vancouver	1,066,796	2,353,247
Victoria	111,640	1,801,465
Prince Rupert	12,900	523,720
North Vancouver	14,882	196,839
Oak Bay	19,400	206,826
Kelowna	120	44,410
Point Grey	60,325	387,594
Kamloops	8,720	84,275
South Vancouver	48,833	145,082
Total.....	1,413,276	5,948,047

[Consul G. R. Taggart, Cornwall, Ontario, Sept. 9.]

New Street Railway Tracks in Cornwall.

Nearing completion in Cornwall is the relaying of the main-track system of the street railway company. About 100 tons of new steel rails, weighing 60 pounds to the yard, have been purchased at an average cost of about \$35 a ton. Most of them were bought from the Canada Steel Foundries (Ltd.), Montreal. The material for inset work, costing about \$2,000, came from Pittsburgh. The Cornwall manager of the street railway stated that rails bought five years ago from the American concern held up so well in front of the office of the company, where there was constant travel, that he persuaded the officers of the street railway company to buy the rails for the inset work again from Pittsburgh. Persuasion was necessary, because the officers were interested in having all the material bought in Canada.

[Vice Consul R. M. Newcomb, Victoria, British Columbia, Aug. 31.]

Patricia Bay Branch of Canadian Northern Railway to Be Completed.

It is announced that the section of the Canadian Northern Railway which is to connect Victoria with the mainland, running from Victoria to Patricia Bay, and thence by ferry to Vancouver, is to be completed and placed in running order without delay.

Construction work on the Canadian Northern Railway has been slow, due mostly to the inability of the managers of this railroad to finance their undertakings. However, it is now stated that a loan of \$11,500,000 has been successfully floated in New York, a portion of which will be available for construction work on Vancouver Island and British Columbia.

Sir William Mackenzie, president of the Canadian Northern Railway has just completed an initial through trip of 2,950 miles on the

Canadian Northern Railway, from Toronto to Vancouver, in 91 hours running time. As soon as the Vancouver Island branch of this railroad is completed, ferry service will connect it with the main line at Vancouver and through service established from Victoria to Toronto.

CUBA.

[Consul Henry M. Wolcott, detailed as vice consul at Habana; dated Sept. 1.]

New Hospitals and Asylums.

Plans have been completed by Government Architect Señor Cabarroca for constructing a modern military hospital at Camp Columbia, Habana, headquarters of the Cuban military forces. It is also planned to construct in each one of the six Provinces of Cuba a modern and well-equipped hospital for the military forces.

An appropriation of \$20,000 has been authorized for a new building at Mazorra, Habana Province, for the Hospital for the Insane of Cuba. The work will be done largely by administration, using such labor as may be available among the patients of the hospital. The building will be equipped with modern sanitary appliances.

The mayor of Habana has approved the project for constructing an asylum for mendicants, the bill having been introduced in the city council by Councilman Vito Candia, and plans for the buildings have been prepared by Architect Lopez Rovirosa.

Proposed Chain of Schoolhouses.

It is stated that the assistant architect of the Department of Public Construction, Señor Cabarroca, is studying plans for 40 school buildings which will be constructed throughout the interior of the Republic. It is understood that the construction work will be of cement and brick. The buildings will be of one story, and will be especially dedicated to the use of the poor children of the country districts; who are at present not well provided for.

The work of providing ample school buildings in the country districts is due to the well-demonstrated interest of the present administration in the betterment of the condition of the agriculturist of Cuba.

Work on Public Buildings.

The building occupied by the State Department of Cuba will soon undergo extensive repairs, and it is stated that another story will be added which will be devoted to offices for the officials of that department. The necessary appropriation for this work is already available.

Credit has been assigned for the continuance of the work on the new Presidential Palace.

New Leper Hospital.

A new leper hospital and colony will be constructed in the Dos Hermanos property in the municipal district of Santiago de las Vegas, about 15 miles from the city of Habana. As soon as the buildings are completed in the new leper colony the patients will be transferred from the old San Lazaro hospital, which occupies a prominent site within the city of Habana, to Dos Hermanos. The housing of lepers within the city of Habana has long been a subject

of severe criticism, and the provision for their proper quarantine at a long distance from any town or city has the approval of the public in general.

HAWAII.

[Honolulu Star-Bulletin, Aug. 26.]

Theater and Business Block.

Plans for building a large up-to-date theater in the heart of Honolulu's business district are announced by W. R. Hughes. Construction work will start about November 1, 1915; the cost will be about \$80,000 and will be leased by Mr. Hughes. The building will be erected by Mr. Wolters, who will put in a business block at the same.

Subscriptions toward the Y. W. C. A. building have now reached \$30,550, leaving only \$9,450 to be obtained. A building is to be bought and remodeled.

NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Aug. 18.]

Building Supplies in Demand.

Matters in the building line are very greatly improving now that money is more plentiful, and the outlook is favorable. This will call for additional builders' hardware, corrugated iron, roofing, etc., from the United States, because European manufacturers are unable to fill orders in most of these lines.

New Kindergarten School—Business Block—Addition to Department Store.

W. C. Johns & Sons have just taken the contract to erect buildings for the Myers Park Kindergarten School at a cost of \$27,807, according to plans drawn by Chilwell & Trevithick.

W. E. Hutchinson has the contract to erect a five-story and basement office building, at a cost of \$53,531, after plans drawn by Mr. A. B. Herrold. This structure is to be fireproof and up to date.

Three stories are being added to the three-story John Court Building, at a cost of \$100,000. This will make an up-to-date six-story commercial building about 100 by 100 feet, to be used by John Court (Ltd.) as a department store.

Freezing Works at Auckland—Street Improvements.

The foundations are being put in for a four-story brick addition to the Auckland Farmers' Freezing Co.'s plant located in this city, to cost \$75,000, after plans drawn by Chilwell & Trevithick. This structure will contain the latest provisions for cold storage, such as insulated floors, walls, etc.

One of the suburbs of Auckland, New Zealand, proposes to expend \$291,990 on building new streets within the next year. This suburb has just completed a \$291,990 drainage system, and many fine residences are being erected and under contemplation in that section.

PHILIPPINES.

[Manila Daily Bulletin, July 27.]

Plans for the New Sugar Centrals.

The Government Central Sugar Board announces that it has definitely decided that, with the \$1,000,000 available, at least one central will be erected and put into operation in time to handle the 1916-17

crop, and that if satisfactory banking arrangements can be made the erection of two mills will be proceeded with. The secretary of the board announced that representatives of sugar-machinery manufacturers were invited to accompany the board to visit the Maa, Isabela, Silay, and Capiz projects in order to secure information to enable them to file bids for supplying machinery and other materials for the central.

PORTUGAL.

[Consul General W. L. Lowrie, Lisbon, Aug. 14.]

Public Improvements in Oporto.

A loan of 3,000,000 escudos (about \$2,200,000) has been made by the Portuguese Government to the Camara Municipal (city council) of Oporto, and the money will be expended on opening new avenues in that city. The work is in charge of the city council.

FARMERS' MEETINGS IN BERMUDA.

[Consul Carl R. Loop, Hamilton, Aug. 20.]

During the present year, as a result of the energy of the director of agriculture, a number of farmers' meetings have been held in Bermuda. At these gatherings such subjects as fertilization, rotation of crops, farming implements, and quality of seed have been discussed. Special attention, however, has been directed to the quality of seed used by potato growers. The director has only recently returned from a trip of inspection to Long Island and Maine, where he visited a large number of farms producing the special kind of potato that is particularly fitted for growth in Bermuda.

Roughly speaking, there are about 560 farmers in Bermuda, 400 of whom may be regarded as more or less substantial. Hitherto, in spite of various attempts, there has been little success in organizing farmers for any special efforts. A meeting was held on August 18 at which a suggestion was put forward by the Governor of the islands that steps be taken to insure genuine cooperation among the farmers by the organization of some form of association. The organization of a land bank was also strongly recommended. At the same meeting samples of good and bad seed were on exhibition as were also various types of agricultural implements. The meeting witnessed a practical demonstration of a new potato digger.

Farming is the only productive industry in Bermuda, and even it has been permitted to languish during recent years; but now it would appear that the Bermuda farmers are beginning to look more seriously upon their work, with a view to regaining lost ground.

GRAPE CROP IN COGNAC DISTRICT.

[Consul Kenneth Stuart Patton, La Rochelle, France, Aug. 12; supplementary report published June 23.]

In the early spring the splendid condition of the vines in the Cognac region gave rise to hopes of a large crop. The continued rainy weather of the early summer months, coupled with inability sufficiently to treat the vines against mildew and other diseases, has been very destructive and poor returns will result. In many instances even the vines are being destroyed from lack of proper care.

COMMERCIAL CONDITIONS IMPROVING IN CHILE.

[Consul General L. J. Keena, Valparaiso, Aug. 6.]

During the past month there has been a more optimistic tone in the Chilean commercial world. The moving factor has been the exportation during the month of July of more than 4,500,000 Spanish quintals (approximately 230,000 metric tons of 2,204.62 pounds each) of nitrate of soda.

The export taxes collected on nitrate for the month of July, 1915, showed an increase of \$71,205 in United States currency over the receipts from this source in the corresponding month of last year.

The customhouse intake for July, in detail, was as follows, the amounts being given in United States currency:

Taxes collected.	Amount.	Taxes collected.	Amount.
IN GOLD.		IN CURRENCY—continued.	
Exportation	\$2,940,840	Lighthouse and harbor fees	\$5,327
Importation	809,177	Exportation taxes	\$31,274
Storage	24,113	Importation taxes	510,673
Lighthouse and tonnage dues	17,909		
Consular fines	27	Total in currency	1,365,068
Total	3,801,075	Total in gold	3,801,075
IN CURRENCY.		Grand total	5,257,138
Wharfing, discharging, and mobilization	17,784		

As already stated, the export taxes in July, 1915, showed an increase over July, 1914. The import taxes, however, in July of this year were \$821,965 less than in the same month of 1914.

The increase in customhouse returns in July over the preceding month of June, this year, was \$1,029,014.

Broadening of Nitrate Market—Greater Demand for Labor—Prices.

The nitrate now being exported is largely "96 per cent 1 per cent," or refined nitrate, for use in the manufacture of powder. The United States has become the principal purchaser of Chilean nitrate.

The broadening of the nitrate export market has naturally increased the demand for labor. More than 6,000 workmen are being sent from the south to Antofagasta, and within a short time the number of persons, including workmen's families, sent to Tarapaca will total approximately 30,000.

Present average nitrate prices are 7s. 10d. (\$1.91) for 96 per cent 1 per cent nitrate per quintal (101.41 pounds), and 7s. 5d. (\$1.80) for 95 per cent, as compared with 7s. 1½d. (\$1.73) for 96 per cent 1 per cent and 6s. 7d. (\$1.60) for 95 per cent a month previous.

Effects of Activity—Firmness of Exchange—Condition of Banks.

The effects of this activity in the nitrate fields, which in Chile spells prosperity both for the Government and for the population in general, have been widespread.

Exchange has remained firm at 8 and 8½ (pence sterling per paper peso, Chilean) for the past few weeks.

As an instance of the unusual firmness of exchange, an incident is recorded of the sale of £10,000 in which the exchange fraction in the difference between the buying and selling rate was split to 1½.

Money, which has up to now been hoarded by the banks, is beginning to appear in the form of loans and discounts. The severe

crisis through which the country has been passing since the outbreak of the war, while it has made conservative banking very necessary, has also given the banks an opportunity and a pretext for thoroughly checking over all their accounts. As a result the banks in Chile are probably in a more thoroughly sound condition at the present time than during normal years.

Copper and Tin—Chilean Coal—Steamship Companies.

The exportation of copper and tin has been stimulated by the advanced values of these metals, and the quantity of copper exported from Chile will from now on be increased by the output of the American company operating the Braden Copper Co. and the Chile Exploration Co. The first shipments of this company from Chuquicamata were made in the month of July.

The difficulty of obtaining Cardiff or Austrian coal and the lack of proper facilities for the regular consignment of American coal to this coast have to a large extent relieved the Chilean coal-mining companies from foreign competition and have given them a market greater than they can supply.

The Chilean steamship companies are equally happily situated. With a general revival of the carrying trade they have little competition to meet, since there are no German lines in operation, the British tonnage is only a small percentage of what it is in normal times, and freight rates remain at a very profitable level.

Hides and wool from Chile have commanded exceptional prices and have been marketed without difficulty.

Import Trade Benefited—Demand Chiefly for General Supplies.

The favorable conditions under which the above industries are now operating have begun to influence beneficially general import trade. Stocks, which in general were heavy at the outbreak of the war and which were practically unsalable for many months thereafter, have been disposed of to a large extent.

Replace materials and general supplies are now demanded of the importers. One line of textiles, for example—osnaburgs—now being received almost exclusively from the United States, in July was entirely sold out in the local market. Only the timely arrival of a large shipment saved the flour mills from having to shut down.

For the present the market demand appears to be confined to general supplies and necessities. The demand for new equipment will undoubtedly follow later.

Tendency to Buy in United States.

In view of the number of articles that can not now be obtained from Europe, because their exportation has been prohibited or because of the difficulty and uncertainty in regard to obtaining them, the general tendency has been to seek an open market for purchase in the United States. It is possible that in the end the year 1915 will have been not only the greatest year in the record of Chilean exportation to the United States, but also the greatest in the matter of United States exports to Chile.

The increased exports from Chile to the United States should provide ample space for return cargoes of more valuable and less bulky manufactured goods.

As regards credits, the exchange does not appear to be direct. It has been repeatedly stated that the favored and most current ex-

change in Chile is on London. Chile at the present time is paying for goods purchased in the United States in dollar exchange and is being paid for her exports to the United States in London exchange.

Prices of Commodities High—Opportunity for Increased American Sales.

In general throughout the Chilean market prices of all commodities are high. To hazard an average it would probably be safe to say that the general increase was not less than 30 per cent. There seems little probability that prices will return to a normal level before the close of the war: First, because the prices of most American products have advanced in their home market, which has now become a controlling factor here; and, second, because freight rates continue to be well above the normal. This very factor of high price in the local market, however, would increase the opportunity for the extension of the sale of American goods in Chile if American manufacturers and exporters would give the market a service, either through importing houses or through selling agents, that would land the goods c. i. f. for sale in Chile. It must be recognized that a percentage of the advance in price locally must be chargeable to additional caution and additional profits on the part of the importer.

[Previous reports by Consul General Keena on Chilean prices and market conditions were published in *COMMERCE REPORTS* for Aug. 13 and Sept. 9, 1915.]

CITRUS-FRUIT INDUSTRY IN EASTERN CUBA.

[Consul P. Merrill Griffith, Santiago, Aug. 11.]

There are several American colonies within this consular district where the work of the majority of the residents is devoted exclusively to the raising of citrus fruits. This industry has grown during the last few years in this part of Cuba, until to-day it is of considerable importance.

The soil in certain sections is especially well adapted to citrus fruits, and the grapefruit, oranges, tangerines, and limes produced on many of these plantations have an excellent reputation both in the United States and Great Britain, to which countries the greater part of the fruit is exported. Some varieties of the grapefruit, in particular, are noted for their size, excellent flavor, and thinness and toughness of skin.

Prices Low This Season—Modern Methods Employed.

In 1914 the crop was extraordinarily large and excellent prices prevailed, but the reverse has been the case during the present year. Prices in general have been very low, for several reasons, and many of the growers have hardly made ends meet.

During the season of 1912 the value of the exports of citrus fruits from this consular district amounted to \$70,384, in 1913 to \$88,027, and in 1914 to \$130,028. Up to the present time this year 37,695 boxes have been exported, valued at \$75,207.

The majority of the citrus-fruit growers in this section are experts and employ the most modern methods in the cultivation of the soil, the preservation of the trees, and the packing of the fruit. The growers here also have the advantage of direct shipments to New York in vessels equipped with modern refrigerating compartments.

PROMOTING PHILIPPINE RATTAN.

[Consul General George E. Anderson, Hongkong, July 31.]

Imports of Philippine rattan into the Hongkong market for local use in making rattan furniture and also for the export trade are reaching a considerable volume and are the subject of much interest and effort on the part of the Philippine government. The two important centers of the rattan trade in the Far East, both with respect to local manufacture and to the export of the raw material to the United States, are Hongkong and Singapore.

Rattan is exported both in its original shape and partly manufactured—that is, after the tough outer coat has been peeled off and separated from the core—the two forming, respectively, the “cane” and the “reed” of commerce. Singapore exports large quantities of the whole rattan, much of it going to Hongkong. Such of this as is destined for the manufacture of cane and reed is forwarded to Canton, where it is peeled or stripped, and then returned to Hongkong for reexport to the United States or elsewhere or for local manufacture into furniture, baskets, and other goods. This has come to be one of the principal industries of Hongkong and leads to a trade with the United States which is growing in volume and importance every year.

Heretofore most of the rattan used for this purpose has come via Singapore from the Dutch Indies, although there is an abundance in the Philippines. Philippine exporters have attempted at various times to build up a trade, but have not as a rule been very successful, largely because of the lack of a proper organization for handling the material.

The war has resulted in interference with the supply of rattan from the sources heretofore furnishing it, and there has consequently arisen in the Philippines a demand for prepared rattan for local industries as well as for export. With a view of meeting this demand the Philippine government has been making an investigation of the manner of handling the material in the industries of Canton and Hongkong, and has also been endeavoring to promote direct export from the Philippines. An expert is being obtained to expand the industry in the Philippines, and Manila exporters are seeking special connections in Hongkong for placing the product on the market.

The indefinite expansion of the trade both with Hongkong and the United States rests apparently upon organization in the Philippines. The supply of rattan available is reported to be such as to meet all the requirements which are likely to exist for some time. The demand from the United States at present affords a special stimulus for organizing the industry on a large scale.

AUSTRIAN GOVERNMENT CONTROL OF OIL PRODUCTION.

[Consul General Albert Halstead, Vienna, Aug. 20.]

Under an imperial decree dated August 18, 1915, the Austrian Government has, as from that date, taken possession of the present and future production of crude petroleum in Galicia and of all stocks of oil belonging to business organizations owned in whole or in part by citizens of countries at war with Austria-Hungary.

HEATING STOVES AND GRATES IN NORTHWEST INDIA.

[Consul James Oliver Laing, Karachi, July 19.]

There is a market in northwest India for small heating stoves and grates. This market is small in Karachi, since the hot weather lasts about eight months in the year and the temperature never reaches the freezing point. In Lahore, Quetta, and other cities farther north or at a higher altitude, however, the winters are more severe and heating is necessary.

In recent years more modern and practical fireplaces and grates are being put into new houses. Formerly the practice of having a good workable grate was less common in this part of the consular district.

Transient Population Prefers Light, Cheap Stoves.

Many Europeans who live here intend to remain in India for only a limited period or are officials who are liable to be sent to other posts. They do not care to invest in expensive stoves, since these are difficult to pack and move. If persons of this class move, the stove would have to be sold at a loss. Together with the fact that in most parts of the district the cold weather is neither rigorous nor of long duration, the migratory manner of living of many of the European residents has brought about the use of light, cheap stoves.

Stoves now in use are usually low and of plain black metal. Sometimes the handles and a few other parts are nickel. The stoves are usually low enough to enable a smoke pipe to run through a common fireplace and up a chimney. Both coal and wood are burned. There is little wood in Sind, the Province in which Karachi is located, but there is plenty in the cities nearer the hills in the north. Coal is mined in India, but the better qualities are imported.

The Queen and Simla Types.

The stove known as the Queen is used for cooking as well as heating, but chiefly for the latter. The cooking part of it is simple and is designed rather to keep food hot or to make some simple dish than to prepare a dinner. The price of this stove was \$5.19, but recently prices in the upcountry districts have risen and the stove is now selling for between \$5.19 and \$6.48, depending on the town in which it is bought and, to a certain extent, on the merchant who sells it.

The Simla type of stove is for heating only and is more expensive. The size 24 by 23 inches sells for \$9.73 to \$10.38 or \$10.70. The size 29 by 28 inches sells for \$11.35 to \$12 or \$12.32. These prices vary slightly in different places. As a rule prices for imported merchandise are higher the farther into the hills one goes.

Removable Fire Box in Grates.

In many grates the iron fire box is removable, and an iron brazier filled with charcoal is used when the weather does not demand a very hot fire. Most grates are of iron and some have tiles inset. The tiles are inexpensive. For a grate 38 by 38 inches, the price ranges from \$8.11 to \$9.73, depending on the place.

The retail season for stoves begins about November, although up-country stores begin to sell a month or six weeks earlier.

[Consul Laing transmitted with this report illustrations of the Queen and Simla stoves referred to above, together with illustrations of cast-iron

curbs, bedroom fenders, sitting-room fenders, and a grate of the type most used in modern bungalows. The prices of these latter articles are also given. This material will be loaned by the Bureau of Foreign and Domestic Commerce. In addition, a list of dealers at Karachi may be obtained. Refer to file No. 65209. For further information concerning stoves in India, see the recently published Handbook of India, obtainable for \$1 from the Superintendent of Documents, Washington, D. C.]

THE MEAT PROBLEM OF ITALY.

[Consul B. Harvey Carroll, Jr., Venice, July 31.]

Rapidly augmenting prices of meat in Italy have caused a number of stock farmers' conferences to be held under the initiative of the National Agrarian Committee. Such meetings have been held in Cremona, Modena, Rome, and other places.

No census of cattle has been taken officially in Italy since 1908, but it is estimated that the number of head of cattle, including milch cows and draft animals, is about 7,000,000. There would go normally to the butcher something over 2,000,000 head per year, at the rate of about 170,000 a month. Half of the cattle annually slaughtered are calves less than one year old.

To supply 2,000,000 troops it is estimated that in six months of war an additional 250,000 head of cattle would be necessary, or, in other words, Italy must provide for an increase in the number of cattle slaughtered of more than 40,000 head a month. Obviously, after subtracting the numbers needed for milch and draft animals, the cattle supply of Italy can not respond to these increased demands on it without outside help. There must be an importation of live cattle or an importation of preserved, canned, refrigerated, or frozen meat.

Argentine Cattle and Meat.

In 1910 a number of cattle were imported from Serbia by way of Saloniki, but the importation was first hampered and then arrested by an outbreak of epizootic. Canada and Brazil are looked to as the chief sources for supplying the present need, but previous exportations from Argentina resulted in the cattle arriving in poor condition.

Italy's importations of frozen meat heretofore have been largely from Argentina and have been used chiefly for the manufacture of Italian canned meats. In 1910 such imports from Argentina totaled 11,467 quintals of 220.46 pounds; in 1911, 77,912 quintals; in 1912, 145,487 quintals; in 1913, 91,170 quintals; and in 1914, 33,125 quintals.

Since the participation of Italy in the war the Government purchases of meat have been increased. Now the syndics of the Italian cities are conferring for the purpose of preventing sudden increases in prices and of establishing cold-storage warehouses and refrigerating plants where none exist.

Mexican State Has New Chamber of Commerce.

The Mexican State of Guanajuato has a new trade body in the recently organized National Chamber of Commerce of Leon. Officers and a board of directors have been elected, Mr. Clemente Gay having been chosen president and Mr. Everardo Gomez secretary. The new chamber plans to have correspondents in every important district in the State.

SOUTH MANCHURIA NOTES.

[Based on clippings from Manchuria Daily News, transmitted by Consul A. A. Williamson, Dairen.]

New Chamber of Commerce at Dairen.

Seventy-two local business men, representing nearly all lines of commercial activity, attended the founders' meeting of the new Dairen Chamber of Commerce [mention of whose organization was made in COMMERCE REPORTS for Aug. 6, 1915]. The election of officers, the appointment of committees, and the adoption of the articles of association as confirmed by the Kwangtung Government comprised the chief business of the meeting. The chamber has been notified by the South Manchuria Railway of the company's intention to contribute 3,000 yen [about \$1,500 gold] annually to the new body.

Dairen and Port Arthur to be Incorporated—Railway Charges.

The question of incorporating Dairen and Port Arthur into municipalities is said to have assumed a concrete shape after careful study of the subject by the authorities concerned. Their incorporation is likely to be announced early in August, and to take effect on October 1 or thereabouts. The mayoralty is to be made an honorary post with an allowance of 3,000 yen [\$1,500 gold] as social expenses annually. The members of the municipal council will number about 30 for Dairen and 16 for Port Arthur.

The South Manchuria Railway has announced a number of alterations in its freight and baggage tariff, the new charges to be effective from August 15. The changes relate to methods of calculating fractions of sen and to the amount to be charged on lengthy and bulky articles.

Unification of Currencies.

Changing the currency standard from silver to gold is one of the proposals contained in a memorandum drafted by the Japanese Cotton Exporters' Association for presentation to the proper authorities, with a view to unifying the currencies in circulation in South Manchuria. As a first step in this direction the association proposes the wider circulation of gold notes, suggesting also:

(1) The Yokohama Specie Bank shall be ordered to suspend the issue of its silver notes.

(2) In order to supply the coolie and other lower-class people employed at the collieries, railway stations, wharves, etc., the banks of issue shall be empowered to issue subsidiary notes of varying denominations, such as 50 sen, 20 sen, and 10 sen. In such event such subsidiary notes shall be used for paying the above-mentioned employees.

(3) The South Manchuria Railway shall be made to pay in and accept nothing but the Japanese gold currency.

(4) The gold standard shall be brought into force on the Dairen Staple Produce Exchange as early as possible.

• **Sulphate of Ammonia Selling Well.**

The water-gas producer factory, Fushun, the erection and equipment of which were designed by Mr. T. Suzuki (superintendent of the Dairen gas works), has been putting out about 10 tons of sulphate of ammonia as a by-product daily. Already more than 1,000 tons of sulphate of ammonia put out at the factory have been sold for some 140,000 yen (approximately \$70,000 gold), which sales have brought in a broad margin of profit. There is said to be a lively demand for this popular fertilizer in Japan.

THE UKULELE OF THE HAWAIIAN ISLANDS.

[A. P. Taylor, correspondent, Honolulu, Aug. 30.]

The manufacture of ukuleles in Hawaii is increasing so rapidly that steps are being taken in the islands to protect them by a special trade-mark in order that those who buy will know whether they have in their possession a real Hawaiian instrument or one made somewhere on the United States mainland.

Early in the eighties Portuguese immigrants from the Madeira Islands arrived in Honolulu, many of them bringing what appeared to be a very small guitar. It was played by holding it close to the body, the fingers of the left hand grasping the neck and the fingers of the right sweeping the entire set of strings. The rapidity of the motion with the right hand caused the Hawaiians to call the instrument "ukulele," or "dancing flea." Though of foreign origin, the ukulele lends itself admirably to the native music of the islands.

Ukulele Music Popular at Exposition.

The Hawaiian Islands erected a building at the Panama Pacific Exposition, in which the "atmosphere" of the Hawaiian Islands was preserved as much as possible. Young Hawaiian musicians play in this building every afternoon and evening. Their music has become so widely popular and has brought the ukulele into so conspicuous popularity that dealers in San Francisco are already increasing their orders in the Hawaiian Islands for these little instruments. One of the largest San Francisco firms placed an order a while back for 200 instruments; he has now increased this order to 500.

A few firms on the mainland have undertaken in the past year to manufacture ukuleles and to place them on the market as a "made-in-Hawaii" product. The Hawaii Promotion Committee of Honolulu is now preparing a special label, "Made in Hawaii, U. S. A.," to be placed on instruments actually manufactured in the islands. The instruments made in Hawaii are fashioned from koa wood, or Hawaiian mahogany, which takes a beautiful polish and is used extensively for making chairs, tables, four-posted beds, and for veneering. It is expensive, as the Hawaiian forests are yielding very few new trees. Ukuleles sell in Honolulu for \$4.50 to \$15 each. The manufacturers are principally Portuguese.

SHORT FRUIT CROP IN SCOTLAND.

[Consul H. D. Van Sant, Dunfermline, Aug. 30.]

During the past week the fruit harvest in the Dunfermline district has been practically concluded, with only moderately good results. The season has been fully three weeks later than usual and the results varied. Gooseberries, which in the early spring promised a plentiful harvest, suffered greatly from the extremely low temperatures here in May. Prices ranged from 5 to 8 cents per pound, a considerable increase on the previous year's rates. Black currants sold for 38 to 42 cents per measure of three pounds; red varieties at 30 cents. Strawberries were barely an average crop, prices being 12 to 33 cents per measure for preserving purposes.

The weather during the past three months has been very rainy, together with frequent thunderstorms, which has largely affected the usually good crop in this district.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Leather boot laces, No. 18327.—An American consular officer in the United Kingdom reports that a firm in his district desires to be placed in touch with American manufacturers of mohair and leather boot laces. References given.

Ice machinery, No. 18328.—A firm in Mexico informs the American consulate that it contemplates installing a new ice and refrigerating plant and would like to communicate with American manufacturers of ice and refrigerating machinery. Correspondence may be in English, but Spanish is preferable.

Flush chest and door handles, No. 18329.—An American consular officer in Italy reports that a firm wishes to purchase 1,000 flush chest and door handles, iron and lacquered, of American make. Goods to be shipped c. i. f. Naples, cash against documents.

Bronze powders, No. 18330.—One of the principal printing establishments in France informs an American consular officer that it desires to secure the representation of American manufacturers of bronze powders used for printing purposes. Correspondence may be in English.

Advertising novelties, No. 18331.—A business man in Central America would like to communicate with American manufacturers of calendars and novelties for advertising purposes. Samples, together with complete information as to prices, etc., are solicited. Terms to be stated in American coinage, but correspondence may be in either Spanish or English.

Piano actions, parts, and supplies, No. 18332.—A piano dealer in Chile informs an American consul that he desires to secure catalogues, prices, and terms from firms in the United States manufacturing piano parts and supplies. He is the principal dealer in pianos in his locality, and wishes to deal directly with manufacturers. Correspondence may be in English, but Spanish is preferred.

Ice machine, No. 18333.—An American consul in Central America reports that a business man in his district is in the market for a .15 to 20 ton ice machine and cold-storage plant. Literature on this subject from American companies is requested. Correspondence may be in English.

Zinc chloride, etc., No. 18334.—A firm in India requests an American consul to place him in touch with American manufacturers of zinc chloride and chemicals used by cotton-weaving mills.

Milling machinery, No. 18335.—A report from an American consular officer in Chile states that a local business man is interested in securing catalogues, prices, and terms from American manufacturers of flour-milling machinery and equipment for a plant to produce from 2 to 10 tons of flour per day. A complete plant is required, except boiler, but including steam engine. Literature in Croatian is preferred, but Spanish is understood. However, catalogues in English may be sent to the American consulate, and their contents will be explained to the inquirer.

Woolens and tailors' supplies, No. 18336.—An American consul in a South American country states that a local tailor in his district desires to secure samples of heavy woolens for men's clothing and also tailors' supplies. Correspondence, literature, terms, and prices should be in Spanish or French, although English would be accepted. Samples should be marked "without value." The consul states duty would not be assessed on samples sent by parcel post.

Machinery, No. 18337.—This Bureau is in receipt of a communication from a man in India desiring names of American manufacturers of machines for the extraction of fibers from agave leaves and from stems and leaves of banana trees. Name of inquirer may be obtained from this Bureau.

Machinery and equipment, No. 18338.—The American consul general in Chile transmits copies of the call for bids and a detail of same for machinery and equipment for the waterworks at La Mochita, Concepcion. The bids are printed in De La Republica de Chile, and copy of same may be inspected at the bureau or its branch offices.

Hardware, No. 18339.—A firm in France requests the American consul to place them in touch with American manufacturers of small hardware, such as nails, hinges, handsaws, hammers, etc., suitable for the South African trade. The plainest and simplest articles are desired. Correspondence, price lists, and catalogues are solicited and should be in English.

Safety pins and automatic metal button fasteners, No. 18340.—A commission merchant in a large city in southeastern France is desirous of being placed in direct communication with American manufacturers of safety pins and automatic metal button fasteners, samples of which may be examined at the bureau or its branch offices. Correspondence should be in French (Refer to file No. 65366.)

HONEY SHORTAGE IN ENGLAND.

The prospects for "heather" honey in England this season are not bright. June frosts, which blighted the heather buds, was followed by a wet summer. The bees of the United States have produced a splendid quantity of honey this year, averaging 36.2 pounds per colony, against 32.2 pounds last year. Over 50,000,000 pounds of honey are produced yearly, hence the English shortage can readily be supplied. This season's large yield, together with increased receipts of honey from the West Indies, has depressed prices, strained honey selling in our Western States at only 3 to 4 cents per pound. American honey exports were only \$136,000 in value in the 12 months ended June 30, 1914, of which but \$4,000 went to England. Exports of honey dropped to \$114,000 during the 12 months ended June 30, 1915, of which \$54,000 worth went to England. Germany was formerly the largest purchaser of American honey, taking in the fiscal year 1912 \$134,000 worth; in 1913, \$107,000 worth; in 1914, \$75,000 worth; and for the year just closed only \$10,000 worth.

AMERICAN CRANBERRY CROP.

Returns from a special inquiry to cranberry growers in the three principal producing States, sent out by the Department of Agriculture August 15, supplemented by the regular September 1 reports, give a probable production for Massachusetts of about 261,000 barrels, being 55 per cent of last year's bumper crop of 475,000 barrels; for New Jersey, 139,000 barrels, a decrease of 7 per cent from last year's crop of 149,000 barrels; and for Wisconsin, 39,000 barrels, an increase of 35 per cent over last year's crop of approximately 29,000 barrels, a probable total for the three States of approximately 439,000 barrels against 653,000 barrels last year.

SOUTH AMERICAN ORDERS.

An American business firm informs the Bureau of Foreign and Domestic Commerce that it has recently received two orders from a Latin-American country, obtained through the information furnished by an American consul in that country, which was published in **COMMERCE REPORTS**. The firm adds that it will doubtless obtain other orders in the field thus opened.

MODEL PORCELAIN FACTORY IN KIANGSI.

[Consul General Edwin S. Cunningham, Hankow, China, July 26.]

The following translation from the Chinese newspaper Kuo Ming Hsin Pao has been made:

The King Teh Cheng porcelain manufactory in Kiangsi was established in the time of the Ming dynasty. It was an imperial concern, which supplied all the fine porcelain used in the royal palaces, so every year huge sums of money were spent for its maintenance and its products attained to a state of perfection. Later, manufactories were organized by the people and, on account of the lack of funds their products were far inferior in quality. It is said this was the only place that preserved the ancient ways of making porcelain, with beautiful ancient colors and exquisite designs, to the present time. It was largely destroyed during the late revolution, and the various samples and patterns which were kept there were all partitioned among themselves by the great men of the republican period. Recently Mr. Ko, the customs taotal of Kiukiang, obtained direct sanction from the President and a grant of \$20,000 gold to restart the works. This will be the national model manufactory of porcelain, and the productions will be limited to two special departments—one for the manufacture of porcelain of the highest quality to be used solely for presentation to the rulers of other powers as gifts, and one for the manufacture of articles for the supply of the market. The work will begin in the month of August.

Ching Teh Cheng is situated on the Yangtze River, near the open port of Kiukiang. Since 1396 the imperial porcelain factory has been located there, and the finest of Chinese porcelain has been produced, though the output has been small. It seems that the continuation of such a plant would be a commendable undertaking, as this is an art in which China has always excelled.

TRADE OPPORTUNITIES AFTER THE WAR.

[Consul General Albert Halstead, Vienna, Austria, Aug. 13.]

At the close of the present European war all the nations now engaged in that struggle will need immediately and in large quantities articles wholly and partly manufactured, as well as raw materials. While this demand may tax the productive resources of all countries for a time, readiness to take advantage of new openings will count heavily in immediate sales as well as in future trade. It is, therefore, urgently suggested that American producers of raw materials and of manufactured and semimanufactured products should begin preparation for this trade.

That the fullest knowledge as to the needs of Austria may be before the manufacturers of the United States, a report is in course of preparation by this consulate general, which, it is hoped, will deal with every possible trade and contain as complete and as accurate information as is obtainable.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 721 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

PANAMA NATIONAL EXPOSITION AGAIN POSTPONED.

[Consul General Alban G. Snyder, Panama, Panama, Aug. 30.]

The opening of the National Exposition of Panama has been postponed again, this time until January 21, 1916.

MARKET FOR AMERICAN GRUBBING HOES IN NATAL.

[Consul William W. Masterson, Durban, Natal, Union of South Africa, Aug. 4.]

I have been informed by a salesman who has traveled considerably throughout Natal and the Transvaal that there is a demand in Natal for grubbing hoes such as manufactured in the United States.

DOLLAR EXCHANGE IN CHILE.

[Consul General L. J. Keena, Valparaiso, Aug. 10.]

The past week recorded the first sale of any importance of Chilean nitrate in which payment was accepted by the producers in New York exchange. The sale, to an American firm, represented 4,000 tons of nitrate, and the draft on New York in payment was in the neighborhood of \$155,000 United States currency.

London exchange has always been the preferred exchange in the nitrate fields, because it was the custom, because it is regularly quoted, because nitrate freights are quoted in English currency and are payable in London exchange, and all market prices of nitrate are quoted in sterling. The war has, however, made possible the exchange of bills on New York in payment of some nitrate purchases.

It remains to be seen to what extent bills on New York will be accepted in payment of nitrate accounts, and also as to whether payments in this medium will be accepted after the war.

It is probable that the next few months will show a number of nitrate purchases in which payments will be made by bills on New York, particularly since there is an active demand at present in Chile for credits on New York.

Since there is no American banking institution in Chile, much of the benefit of the present tendency to establish dollar exchange must be lost, as this type of exchange is only temporarily favored by foreign banking houses.

MINING PROSPECTS IN MANCHURIA.

[Consul J. Paul Jameson, Antung, China, July 3.]

In view of the question of mining rights in Manchuria discussed by Japan in its recent negotiations with the Chinese Government, it may be noted that the mineral deposits in South Manchuria are exceedingly numerous and of various kinds. The mineral deposits of this large region are almost untouched as yet. Gold, silver, lead, tungsten, and other metals appear in many places throughout South Manchuria, the country between the Antung-Mukden Railway and the Mukden-Dairen branch of the South Manchuria Railway being especially rich in deposits, according to report. Minerals of many kinds are also said to be abundant in the upper Yalu River districts, but very little actual prospecting has yet been done.

Arrangements have been made with a man who has been prospecting for many months in various parts of Manchuria to supply the writer with samples of the ores found. With this report are transmitted samples of lead ore picked up in many places in South Manchuria, in the hope that tests may show it to be of sufficient commercial value to warrant further investigation. [These samples will be loaned by the Bureau of Foreign and Domestic Commerce. Refer to file No. 65476.]

The market value of the lead ore should be about 200 yen per ton. The mines, or rather prospects, are located 10 to 30 miles from railways. The transportation of ore from the mines to a navigable seaport would cost about 10 to 20 yen per ton. The cost of mining is estimated at about the same. The ore submitted is from five different places. The width of veins seen varied from 1 to 5 feet. The ore appears in both quartz and limestone formations—the latter in most places. There are further reports from native Chinese to the effect that many lead outcrops exist throughout South Manchuria, which the Chinese for some reason have not worked.

SPANISH COMMERCE WITH MOROCCO.

[Consul General Carl Bailey Hurst, Barcelona, Spain, July 30.]

In connection with the efforts of Spanish exporters to gain a stronger foothold for their commerce in the Spanish possessions in Morocco, the following statistics recently made available are of interest as showing how little of this great trade is now in their possession:

During the year 1914, out of 60,000,000 pesetas (\$10,800,000) worth of products entered at the port of Melilla, only 4,000,000 pesetas (\$720,000) worth were from Spain; at the port of Ceuta, out of 42,000,000 pesetas (\$7,560,000) worth, only 15,000,000 pesetas (\$2,700,000) represented the value from Spain; at Laroche, out of 23,000,000 pesetas (\$4,140,000) worth, 3,000,000 pesetas (\$540,000) worth came from Spain; and at Marruecoa, out of 216,000,000 pesetas (\$38,880,000) worth, only 14,000,000 pesetas (\$2,520,000) worth was Spanish. Thus, out of 341,000,000 pesetas (\$61,380,000), Spain's receipts amounted only to 36,000,000 pesetas (\$6,480,000), or less than 11 per cent. During this time Spain expended on its possessions in Africa more than 142,000,000 pesetas (\$25,560,000).

FOREIGN TRADE OF THE UNITED STATES.

With imports 10 per cent less and domestic exports 75 per cent more than in the corresponding month of last year, the foreign trade of the United States (including reexports, which show a gain of nearly 36 per cent) for the month of July, 1915, exceeded the total for July, 1914, by \$98,403,109, or 31 per cent. For the seven months ending July, 1915, imports were 12 per cent less, exports 64 per cent more, and the total trade \$638,262,138, or 27 per cent, above the value for the like period last year. Classified by great groups, the trade values were:

Groups.	Month of July—		Seven months ending with July—	
	1914	1915	1914	1915
IMPORTS.				
Crude materials for use in manufacturing.....	\$48,433,943	\$57,736,235	\$395,493,117	\$382,005,240
Foodstuffs in crude condition, and food animals	18,852,517	16,464,362	142,296,987	128,070,833
Foodstuffs partly or wholly manufactured.....	26,759,823	23,607,692	158,078,224	183,712,778

Grand total trade.....	313,816,238	412,219,347	2,341,576,535	2,979,837,673

The increase in the exports for July, 1915, in the item miscellaneous to a total of \$12,767,509 arises from the exportation of horses in that month to the value of \$9,867,257, of mules to the value of \$2,825,142, and of seeds valued at \$57,594.

SHIPMENTS OF INDIAN HIDES AND SKINS.

[Consul General James A. Smith, Calcutta, Aug. 5.]

In connection with the restrictions placed upon the exportation of hides and skins, this consulate general had previously stated that the collector of customs would be satisfied with a declaration from the Department of State to the effect that the ultimate destination of the goods was not enemy territory. The collector of customs at Calcutta has been instructed by the Secretary of the Department of Commerce and Industry that this method will no longer be available; that is, that a firm wishing to ship to the United States must get their American clients to secure a guaranty from the British consul, which they must be in a position to show to him. This guaranty of the British consul must be cabled to the India Office in London, and by that office communicated to the collector of customs.

MONGOLIAN TOWNS TO BE OPENED TO TRADE.

[Consul General P. S. Helntzleman, Mukden, Manchuria, Aug. 3.]

The Chinese Government, having announced the intention in June, 1913, to open to international residence and trade five new marts in South Manchuria and Eastern Inner Mongolia, namely, Kalgan, Chibfeng, Dolon Nor, Taonanfu, and Hulutao, has now decided to open Kalgan, Taonanfu, and Hulutao during 1915 and the remaining marts later. The new marts in Eastern Inner Mongolia to be opened as soon as possible "by China itself," under the terms of the Sino-Japanese treaty of May 25, 1915, are now being considered by the two Governments. It is said that about 10 places are under discussion as possible commercial towns.

China's Economic Activity in Mongolia.

China's economic activity in Eastern Mongolia, especially since the signing of the Sino-Japanese treaties, is noteworthy. Though Japan has disclaimed political or strategic pretensions in Eastern Mongolia and has announced an intention to establish economic interests therein, the Chinese Government is devising plans of an economic nature in that region. It is reported to have planned the following in Eastern Mongolia:

(1) A special fund shall be provided for founding new industries and for developing the pastoral pursuits of the Mongolians.

(2) Commercial and industrial unions of all kinds shall be organized for the purpose of furnishing employment to the Mongolian unemployed.

(3) Mongolians shall be recruited for taking up agricultural and colonizing pursuits, so that Mongolia may develop into a great agricultural country.

In addition to the above, the Chinese Government proposes to establish a Sino-Mongolian Bank with a capital of \$1,200,000, one-half of which is to be furnished by the Government and the other half to be opened to public subscription. The new bank is to operate at Urga, Kiakhta, and Maimaicheng, which have already become important centers of Russo-Mongolian trade but are not yet provided with an adequate financing medium. A further report states that both the Bank of China and the Bank of Communications are to open branch offices at the three places mentioned above.

A number of prominent Chinese business men in Peking have established the Manchuria and Mongolia Enterprise Bank, with a view to fostering agriculture, stock farming, afforestation, and irrigation in Manchuria and Mongolia. The bank is capitalized at \$2,000,000 and has its head office at Peking, with branches to be opened at various places in the three eastern Provinces.

The proposed establishment of a district under a taoyin for eastern Mongolia, as submitted by the civil governor of Fengtien Province, has been sanctioned by the central Government. The ex-prefect of Chengte (Schol) has been chosen for the new post and is already at Mukden. His appointment will be announced shortly.

Work to Be Started on New Telegraphic Service.

The central Government arranged with the Mukden government to bear half the expense in establishing telegraphic service between Mukden, points in Eastern Mongolia, and Peking. This arrangement was made in March, 1915, and the estimated cost was \$600,000. The commencement of work was postponed, owing to the Sino-

Japanese negotiations. The Peking Government recently ordered the civil governor at Mukden to start work without further delay. At the same time a grant of \$100,000 was made as the Government's share of the work on the first part of the plan. The line will extend from Mukden to Taonanfu, a distance of 208 miles, thence south to Jehol via Chihfeng, an additional 325 miles, making the total length of the line 533 miles. Jehol is already connected by telegraph with Peking.

[Previous reports by Consul Heintzleman on trade conditions in the region referred to above were published in COMMERCE REPORTS for Apr. 17 and July 3, 1915.]

SELLING MACHINERY IN NAGASAKI DISTRICT.

[Consul E. Carleton Baker, Nagasaki, Japan, July 30.]

Since mining and shipbuilding are carried on to a very considerable extent in the Nagasaki district, there is an excellent opportunity for the sale of mining and electrical equipment. It is best, however, to have a personal representative in the field who is familiar with local conditions and has connections already established. The principal machinery imported last year at Nagasaki and Moji included steam boilers, locomotives and tenders, steam turbines, dynamos, cranes, pumps, and metal-working machinery. The value of machinery imported to Moji alone exceeded \$1,250,000, and the amount brought to Nagasaki was almost \$750,000.

Qualified Representative Available.

A British merchant at Moji, who is familiar with American business methods, is in a position to represent American manufacturers of machinery. [His name and Consul Baker's statement of his qualifications may be obtained on application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65268.]

The agent in question desires to work on a commission basis, but suggests that a small salary be allowed, as well as a certain amount to cover cost of telegrams. He agrees to sell only to responsible firms, who are financially strong and able to open the usual credits for his principals to draw against.

Exceptional Opportunity at Present.

A great deal of the machinery trade in this district has been in the hands of firms who are unable at present to supply the local demand. The moment, therefore, is most opportune for Americans to enter the field. A consistent and determined effort, however, should be made and every facility should be offered. An engineer should be appointed who should work in conjunction with a good English-speaking Japanese engineer and reliable interpreter. These natives should be selected from the better class of Japanese, who could be received socially by the higher Government officials and the heads of the best Japanese firms. Obtaining contracts in the Orient usually requires elaborate preparations and a series of entertainments, and offices that expect to do a large business should be established on a liberal scale. Details in this regard could be readily arranged with a manufacturer's agent who is thoroughly familiar with local requirements.

REVIVAL IN FLAX-FIBER GROWING IN ONTARIO.

[Consul Fred C. Slater, Sarnia, Canada, Sept. 4.]

Flax is quite extensively grown in various parts of Canada, particularly in the northwestern Provinces. However, the production of flax for fiber purposes has been almost negligible in quantity—practically all of it having been in the Sarnia consular district, where the climate, soil, and water conditions are most suitable. Recently the industry received a new impetus, as a result of finding water excellently suitable for retting purposes. The water thus discovered seems to be in the peninsular portion of the Province, near the lakes. At Forest it is obtained from a well bored 100 feet through the clay and 1 foot into the rock. This rock is of shale formation, and it is supposed that the water comes underground from Lake Huron, only a few miles distant. Interest in raising flax has therefore been revived, as the retting with this water produces a quality not heretofore obtained.

History of Industry—Reasons for Previous Decline.

It is reported that half a century ago some 17 prosperous scutch mills operated in this Province. One pioneer of the industry relates that in one season he purchased 26,000 tons of Canadian flax, while other buyers did equally well. But those were times of cheaper labor, more new "breaking" land, and less keen competition. The progress of the age made necessary different processes and more up-to-date methods, to which the grower and manufacturer were not alert, and the industry gradually declined. Neither did the subsequent agricultural colleges and specialists give the raising of this crop the consideration it merited. As a result the raising of flax in this Province for commercial purposes had dwindled to almost nothing. It is claimed that by 1914 the number of mills in operation had fallen to less than a dozen. This year, however, there are 20 in operation to handle the 1915 crop, which is three times greater in acreage than that of 1914.

It is claimed that experience proves the dewret process preferable to chemical retting.

The Present Revival—Experts Make Encouraging Reports.

For the last two or three years a few men of this Province have given special and careful attention to the raising of flax fiber and have met with exceptional encouragement. The raising of the product was considerably stimulated because of the European war increasing the price of the fiber from \$0.12 and \$0.14 to \$0.22 per pound. This, together with the already noted discovery of better water for retting purposes, has, for the time being, brought flax growing to the fore in this vicinity. Recently men from Ireland and New Jersey who are interested in flax have gone over the ground in this locality and have made very optimistic reports as to the growing of this commodity. Many of the old idle mills are being refitted and brought back to service.

Anticipations of Growers—Details of Process.

The flax growers of this vicinity are very hopeful and are endeavoring to secure the cooperation of some Belgian refugees who have had special experience in flax raising and handling. They also hope

to induce the Government to test the water in different localities for retting purposes.

The following detailed explanation as to the water-retting process of flax fiber, as now conducted at Forest, Ontario, was furnished this consulate September 2 through the kindness of J. A. McCracken, secretary of the Canada Flax Growers, of St. Marys, Ontario:

The flax is pulled a little greener than according to the old Canadian practice; that is, when the leaves a few inches up from the root are withered away. The retting tank (of which more may be built later) is 50 feet long by 15 feet wide by 4 feet deep. It is of concrete, with 10-inch walls, and has a partition across the center. Each half will hold a small wagonload of flax sheaves.

The sheaves after thrashing are set in on end, heads up, until the tank is filled. Planks are set on the tops of the flax, and stones on these, so as to keep the straw immersed when the water is turned on.

The water is fairly soft. As it rises from the well it is frequently very muddy. The softness of the Forest well water, even in drilled wells such as this, has been remarked by the women, who have used it at times for washing. At the Fraleigh plant the pumping is done by a 1½-horsepower gasoline pump adjacent to the tank.

When the flax is weighted, as above described, the pump is started and kept going until the tank is full. While this is going on several adjustments are necessary to the weights, as when the fermentation sets up the flax tends to rise out of the water. During this time the retting or degumming takes place by the action of the water.

The first experimental "steep" at Forest was removed after five days and spread on a meadow in rows to dry. This lot was found to have been too hard when taken out of the water. It happened, however, that a day's rain came on and completed the retting, after which the flax, when dry, was lifted and stored in the shed.

Later steeps have taken from 6 to 10 days, and the consequent amount of retting required to be done on the spread field has been proportionately less. No exact time for water retting, however, can be set, owing to the differences in flax, water, and weather.

Water-Retted Fiber of Excellent Quality.

Mr. Coey, of the Linen Thread Co., Newark, N. J., recently hackled at Forest some of the fiber obtained from representative samples of water-retted and dewretted flax grown and treated at Forest. He declared that the water-retted fiber was of excellent quality, even in character, and of fine spinning texture. He declared that it was worth at least 2 cents a pound more than the dewretted fiber. This is gratifying to Canadians, since the present shortage is chiefly of fine spinning fibers, of which the Belgian were the highest grade. Canadian flax manufacturers are hoping so to improve their plants and processes as to enter the best markets and thus place their industry on a permanent and prosperous footing. The Canadian Flax Growers, recently organized, are bending their energies to this end.

[An article on "Production of Canadian Flax," by Consul Henry P. Starrett, appeared in *COMMERCE REPORTS* for July 19, 1915.]

Canadian turkeys were shipped to England last fall for the first time, and more are expected to go this season.

AMERICAN AUTOMOBILES IN PORTO RICO.

[Harwood Hull, correspondent, San Juan, Sept. 11.]

The past year has shown a remarkable increase in the number of motor cars purchased in the island, 548 cars having been imported during the twelve months ending with June 30, 1915. These cars were valued at \$433,408 and were all of American manufacture. No foreign cars have been sold here in recent years. With the importation of cars during the past year insular officials say there are approximately 2,000 motor cars in the island, most of them in constant use.

In 1913 the number of cars brought into Porto Rico was 323, and their value \$406,440. From these figures it will be seen that there has been a marked decrease in the average price paid for motor cars sold here, the average price being under \$800. There is no demand here for high-priced cars. In 1914 there were 291 cars imported at a cost of \$320,680.

Automobile parts purchased in 1915 were valued at \$91,045; in 1914, \$70,025; and 1913, \$93,813.

Automobile tires showed a falling off during the past year as compared with the previous fiscal year. Tire imports for 1915 were \$251,426; for 1914, \$296,201; and for 1913, \$241,714.

Importations of motorcycles, bicycles, and tricycles have shown a decline for the past two years. These purchases for the 12 months ending with June, 1915, were \$27,377, as compared with \$43,967 for the previous 12 months and \$51,367 for the 12 months ending with June, 1913.

The motor car here is used as the chief means of passenger transportation, both private and public, about the island. There are regular motor lines running from San Juan to all sections of the island, and in many instances the fares charged are less than those charged by the railroads. Mail to about half of the towns of the island is delivered by motor, and most of the established motor lines operate an express and parcel-delivery service.

Recently the jitney has made its appearance here in competition with an interurban steam railroad running 5 miles between the towns of Catano and Bayamon. The railroad has carried 500,000 passengers a year and the fare has been 10 cents until the arrival of the jitney. Then the railroad cut the fare to 5 cents, but the jitney continues to get many passengers at the old fare of 10 cents.

INCREASED PRICE OF GAS IN LEEDS.

[Consul Homer M. Byington, Leeds, England, Sept. 2.]

The Leeds Corporation has increased the charge for gas to consumers by 6 cents per 1,000 cubic meters. The gas committee justifies the increase by stating that its coal contracts provided for an increase of 4s. (97 cents) per ton upon 1913 prices, and an increase of 5s. (\$1.21) per ton upon 1914 prices, which would involve an increased cost to the department of \$262,791. Further, it had to consider the increased cost of labor, etc.

SHIPPING AT MARSEILLE SINCE WAR.

[Consul General A. Gaulin, Marseille, France, Aug. 24.]

While there was a notable decrease in the total number and tonnage of ships entered and cleared at Marseille from August 1, 1914, to July 31, 1915, the navigation movement between this port and the United States was much more important than during the corresponding period of 1913-14, as shown by statistics obtained from the customhouse authorities. The arrivals and departures of cargo-laden vessels at Marseille from and for the United States during the two periods referred to were:

Period.	Entries.		Clearances.	
	Number of vessels.	Net registered tonnage.	Number of vessels.	Net registered tonnage.
August, 1913-July, 1914.....	81	145,852	77	271,108
August, 1914-July, 1915.....	203	609,253	50	200,871
Increase (+) or decrease (-) in 1914-15.....	+122	+463,401	-27	-70,237

The above statistics do not include vessels in ballast, which explains the large excess of entries over clearances.

American Flag Reappears—Traffic for Six Months.

A gratifying feature was the reappearance of the American flag in this port. No American merchant vessel had come to Marseille since 1906. This year thus far three have entered. Of the 203 ships which arrived from the United States from August, 1914, to July, 1915, 86 came from New York, 41 from New Orleans, 26 from Galveston, 20 from Baltimore, 14 from Newport News, 6 from Philadelphia, 3 from Tacoma, 2 from San Francisco, 2 from Port Arthur, 1 from Norfolk, 1 from Sabine, and 1 from Portland (Oregon).

According to statistics issued by the commander of the Port of Marseille, the maritime traffic during the first six months of 1915 (entries and clearances combined) was as follows: Number of vessels, 6,000; net registered tonnage, 7,251,573; merchandise tonnage, 4,019,099; number of passengers, 197,801. These figures represent, as compared with the corresponding period of the preceding year, a decrease of 2,664 vessels, 3,617,578 tons of registered tonnage, 940,063 tons of merchandise, and 25,297 passengers. Over 60 per cent of the decrease in the merchandise tonnage was due to the falling off in exports. Moreover, the first six months of 1914 had been a period of unusual activity in the foreign trade of the district.

SCARCITY OF MATCHES IN ENGLAND.

A prospective scarcity of matches, and the present shortage of wood used therefor, is noted by English newspapers. Consul Homer M. Byington, of Leeds, comments:

"Frequent criticisms are heard of the quality of matches now being sold, and a study of freight rates by American manufacturers might prove interesting in determining whether competition in this market could be inaugurated."

FAR EASTERN FREIGHT SITUATION.

[Consul General George E. Anderson, Hongkong, British China, Aug. 5.]

What the actual and more permanent results of the war in Europe upon Far Eastern freight rates are to be is decidedly problematical. Recent developments have rendered the immediate future of trans-Pacific freights particularly uncertain, and some of the more important shipping lines are modifying their services and changing their plans accordingly.

As indicated in previous reports from this consulate general, there has been a marked shortage in available tonnage in all services in the Far East since the beginning of the war in Europe. This shortage has continued upon practically all lines of traffic and without relief until within the past few months or so. With the coming of the slack summer season, however, notable changes have intervened. The first change came in a marked falling off in freights between the Far East and Europe, particularly in freights from Europe to the Far East. While there was enough of a demand for tonnage from the Far East to Europe to keep up the rates between these two parts of the world the demand largely became a one-way call for tonnage. It was in line with this tendency in freights that the Nippon Yusen Kaisha inaugurated a round-the-world service of ships from the Far East to London, thence returning to the Orient by America and the Panama Canal.

Heavy Cargoes from United States, but Little Return Freight.

Within the past few weeks the offering of freight for the United States by way of the Pacific Ocean has fallen off until for the present there is actually a shortage of freight for vessels in service in that direction. On the other hand, vessels from the United States to the Far East have more work than they can perform, and the shortage of tonnage on the outward voyage is almost as marked as it ever has been. It is anticipated that the offering of freight for the United States by way of the Pacific will again increase in October, in line with the usual course of this traffic, and after that time there will be a marked shortage of tonnage from the Far East to the Pacific coast. This shortage of tonnage heretofore has especially militated against trade in Chinese products, since most of the trans-Pacific steamer services were tied up with contracts covering the shipment of gunny sacks from India and similar lines of traffic.

While some of these contracts continue into the fall, conditions will so far change then that all lines of freight will probably be given a more equable share of available space. The Japanese shippers will doubtless be given preference on Japanese ships in case the shortage becomes acute, just as they have been during the acute shortage of the current season.

The American Line.

The most uncertain element in the entire situation is the question of whether or not the vessels of the Pacific Mail Steamship Co. will have to be taken off the trans-Pacific run as a result of recent legislation in the United States. Action so far taken by agents and others concerned in Eastern ports contemplates the complete cessation of the service of five ships by January, 1916, and of the sixth vessel by March 4.

The removal of these vessels from the trans-Pacific run will precipitate a situation of the gravest sort, involving a stoppage of practically all of the new business in the Far East obtained by American manufacturers since the beginning of the war, as well as interfering in a most critical way with American manufacturers obtaining certain raw materials in this part of the world. The shortage of tonnage for the fall and winter even with these vessels in service will be acute and serious and will profoundly affect all Far Eastern trade. Without these vessels the situation will become simply impossible.

Japanese Service.

One result of recent changes in the Far Eastern freight situation has been a change in the plans of the Nippon Yusen Kaisha as to its Panama service. It is now announced by agencies of this company that a new service, which includes the *Tsushima Maru*, *Toyooka Maru*, *Takata Maru*, *Toyohashi Maru*, *Tokuyama Maru*, and the *Toyama Maru*—all of 7,500 tons—and the *Kanagawa Maru*, the *Tototori Maru*, the *Takushima Maru*, and the *Wasaka Maru*—all of 6,000 tons—will be established at once. This service proceeds on its round-the-world course not in the ordinary direction of from Yokohama to Panama and thence to New York and London, returning by the Suez route, but for the present it proceeds from Yokohama by way of Hongkong to London, thence to New York, and then to Panama and home.

This plan, it will be noticed, is directly in line with the present course of freight. The strong demand for tonnage from New York to Japan and the Far East for the oil and steel trades furnishes a basis upon which this service can be predicated. The present service of ships to and from Europe will serve the present ordinary trade to and from Europe, and this new service will supplement the present regular services by meeting the new and somewhat special demand for tonnage along these particular routes as developed by the war. This service, thus established under special and somewhat extraordinary conditions, will serve as the basis of the long-projected regular and subsidized service by way of Panama after the war.

The use of British vessels by the British Government in the movement of troops to and from India has given the Japanese lines serving that particular part of the world a great advantage, and extra ships have been added on both the Calcutta and the Bombay runs. The movement of freight from India to Hongkong on these services has been particularly heavy during the present year to date, and has contributed, in a measure, to the congestion of freight in this port during that period. Extra ships have also been added in the Japanese service to Australia by way of Hongkong. Japanese trade with Australia is being boomed in every way possible, special activity being shown in the efforts of Japanese interests in Hongkong to get in touch with connections of trade in Australia which formerly were German.

Increased Japanese Tonnage.

In connection with the extension of these services the general position of Japanese shipping in the far eastern freight situation merits attention. As a result of the war German and Austrian ships have been removed from the trade altogether, while a very large share of

British tonnage has been withdrawn temporarily to meet the military requirements of the British Government. The Japanese services, however, have been uniformly and largely increased. According to official statistics prepared at the end of March and published in Japanese newspapers, the number of Japanese steamers of over 20 tons was 2,128, and their total tonnage 1,585,912 tons, of which ships over 1,000 tons numbered 412, their total tonnage being 1,316,937. Of the total tonnage of 1,585,912, over 1,000,000 tons belong to the Nippon Yusen Kaisha, Toyo Kisen Kaisha, Osaka Shosen Kaisha, the Nisshin Kisen Kaisha, and the Nanyo Yusen Kaisha, and the rest, some 500,000 tons, belong to the Mitsui Bussan Kaisha, Mitsu Bishi, and other individual shipowners.

Of the vessels belonging to the individual shipowners, those capable of ocean navigation are now put on the ocean service, either on their own account or on charter, without any restriction of the Government, and such ships are now said to amount to 280,000 tons in all. According to Japanese newspapers, the tonnage of the contracts now being carried out in the construction of vessels in various shipyards amounts to 280,000 tons, to be finished early in 1917. With this tonnage launched the total of Japan's merchant marine will exceed 1,860,000 tons.

AMERICAN EXPERTS FOR CHINESE GOVERNMENT.

Through the assistance of the Bureau of Foreign and Domestic Commerce and Commercial Attaché Julean H. Arnold, at Peking, the Chinese Government has arranged for the employment of an American cotton-growing expert for that country. The expert selected is Mr. H. H. Jobson, assistant agronomist of the Texas Agricultural Experiment Station, at College Station, Tex. He has entered into a three years' contract.

The Chinese Government is striving to develop the resources and industries of that country, and the employment of a cotton-growing expert is one of the first steps toward an improvement in the production of cotton. At present China produces a considerable quantity of cotton, most of which is used in the home industries. In some years China exports a considerable amount of cotton to Japan, and with improvement in the staple and in methods of grading and packing, the foreign trade in cotton will largely increase.

Negotiations are also in progress for the employment of an American forestry expert by the Chinese Government. While there are many young Chinese who have been trained in forestry schools abroad, China has at present no person who is qualified to take charge of the institution of constructive work in reafforestation for the Chinese people, a most important matter for a country so badly deforested as is China. It is probable that this position will be accepted by a forestry expert now employed by the Philippine government.

The waterworks commissioners of Amsterdam, reports Commercial Attaché Erwin W. Thompson, are planning an extension of the waterworks system of that Netherlands city to supply an additional 750,000 gallons per day.

REPORT OF GÖTEBORG'S MUNICIPAL TRAMWAY.

[Consul Emil Sauer, Göteborg, Sweden, Aug. 7.]

The street railway system of Göteborg is of special interest, as it is owned and operated entirely by the municipality. There are 37.9 miles of track, all surface lines. An addition of 2.35 miles was made to the trackage during the year on the Kviberg-Landala line.

The rolling stock consists of 119 motor cars, 75 cars without motors, and 16 snowplows, brine barrels (mounted on cars for sprinkling rails to melt snow), repair cars, and cars with ladders. Of the motor cars, 111 are for passengers, 5 for freight, and 3 are bogies. Of the cars without motors, 24 are closed cars and 37 open cars for passengers, and 13 are open cars for freight and 1 a closed car for freight. The car mileage for the year was 3,657,136 for motor cars, 39,273 for locomotive cars for freight transport, and 870,675 for cars without motors, a total of 4,567,084 miles.

Employees and Fares.

The number of employees at the end of the year 1914 was 909 as against 807 at the close of 1913 and 258 in 1902. The first number includes 9 employed in the head office, 53 in the repair shops, 101 in the car sheds, and 746 for conducting the traffic, including motormen, conductors, watchmen, inspectors, etc.

The maximum cost of a fare, including as many transfers as is required to go over any section of the system, is 10 öre, or \$0.0268. Coupon books containing 10 fares are sold at 9 öre per coupon, and the fares of children are 6 öre and 5 öre. The number of fares of the various kinds collected was 27,311,613 in 1914, as compared with 25,653,574 in 1913 and 10,629,969 in 1902.

There were issued 10,302,000 transfer tickets in 1914, of which 8,614,975 were actually used. Besides the number of fares collected as above there were sold, in 1914, 610 season tickets good for 12 months and 3,094 good for 6 months, both nontransferable. The price of these is, respectively, 75 crowns (\$20.10) and 40 crowns (\$10.72). There were also sold 456 50-kronor (\$13.40) tickets, good only for some particular one of the several lines of the system.

Receipts and Expenditures.

The traffic receipts of the system for 1914 totaled \$708,800, which sum includes \$8,107 for freight, baggage, carrying mail, etc. In the balance sheet for the year there are added to the gross receipts from the traffic certain items for interest, rent, season tickets, and also unappropriated profits from the year 1912, making a total gross income of \$738,156. Expenditures amounted to \$526,981 and included such items as \$231,080 for operating expenses, \$16,612 for office expenses, \$120,154 for electric energy, \$71,672 for rolling stock, \$47,068 for trackage, and \$12,353 for car-shed and workshop expenses.

The net profits amounted to \$211,175. Of this \$109,478 was paid into the city treasury and \$86,376 was carried over to the stock account, leaving \$15,321 unappropriated. The net profits for the year 1913 were \$186,449. The causes of the decrease in 1914 were the higher compensation of the employees, allowances to employees mobilized for service in the army, and increased upkeep expenses.

ELECTRICAL SUPPLIES FOR SOUTHEASTERN CUBA.

[Consul P. Merrill Griffith, Santiago, Aug. 27.]

In Santiago de Cuba and throughout this consular district there is a constantly increasing demand for electrical supplies and apparatus of various kinds. Especially is this true in the interior of the district, where many improvements are being made on sugar plantations and new mills are being erected. Further, all cities of any size within this district are supplied with electric lights, and the plants are, in general, sufficiently large to furnish current for other purposes.

For several years the United States has dominated the Cuban market in this particular line of goods, but this does not alter the fact that the business may be considerably augmented now. [In the fiscal year 1914 the United States exported to all Cuba \$1,222,914 worth of electrical machinery, appliances, and instruments; in 1915 the shipments fell some \$250,000 below this, the exact figure being \$973,177, made up of: Batteries, \$43,084; dynamos or generators, \$34,669; fans, \$17,249; insulated wire and cables, \$166,026; interior wiring supplies, etc., including fixtures, \$119,350; arc lamps, \$2,107; incandescent lamps—carbon filament \$6,081, metal filament \$74,166; meters and other measuring instruments, \$57,657; motors, \$136,418; static transformers, \$45,779; telegraph instruments, including wire-less apparatus, \$548; telephones, \$76,079; all other, \$211,213.]

Market for Novelties.

There is a steady call for ordinary electrical supplies such as are in general use, and an excellent opportunity presents itself to create a demand for various kinds which are popular and of more recent development. Meters of alternating-current types and also transformers for lighting and power purposes are in use here, but such supplies are purchased direct from the United States and are not carried in stock by any of the local dealers.

The capacity of the Santiago plant is 2,300 kilowatts alternating current and 800 kilowatts direct. On the alternating current, the frequency of cycles is 60; phases usually used for motors, 3; and the voltage 110 and 220. The street railway voltage is 550 direct current.

[A very extensive series of reports on hydroelectric development and the outlook for augmented sales of electrical materials of all kinds has been prepared by American consular officers in various countries. As announced in earlier issues of COMMERCE REPORTS, the Bureau of Foreign and Domestic Commerce has arranged to place these reports (known as Hydroelectric Series Nos. 1 and 2), in manuscript form, in the industrial centers of the United States, where they may be inspected by manufacturers and exporters.]

VALUE OF COMMERCE REPORTS.

A business firm in New York City has just written to the Bureau of Foreign and Domestic Commerce: "Since receiving your Daily Reports we have obtained considerable business; in fact, we have done in direct trade about \$25,000 worth of business. We were also indirectly moved to open an office in Norway and a further one in Italy through the help of the bureau and the different consuls."

A FARMERS' COLD-STORAGE PLANT IN CANADA.

[Consul G. E. Taggart, Cornwall, Ontario, Sept. 9.]

A small and yet modern cold-storage plant has recently been completed at Morrisburg, Ontario (a town of about 1,900 inhabitants, in a prosperous dairy-farming community, and about 30 miles west of here on the Grand Trunk Railway between Montreal and Toronto).

The total cost of the plant was about \$22,000. It is equipped with a system of refrigeration and machinery from the Linde Canadian Refrigeration Co. of Montreal, costing \$4,000. The refrigeration machine carries a pressure of 115 pounds and a back pressure of 7 pounds, the whole system being charged with 500 pounds of liquid ammonia, which keeps the temperature as low as 10° above zero in August weather. There are eight storing rooms, 28 by 19 feet floor space each (45,000 cubic feet in all), all fitted with coils piped from the refrigeration machine. The claim is made that this enterprise is not only profitable, but is a boon to the farming community because of the low charges for storing. The argument is that any farmer can afford to store his products when the market is low instead of being at the mercy of the large cold-storage concerns. Some of the storage rates are as follows:

Apples, per barrel: First month, 12½ cents; succeeding months, 10 cents; season, 40 cents. Per box: First month, 5 cents; following months, 4 cents; season, 17½ cents.

Butter, per 100 pounds: Two weeks, 8 cents; one month, 14 cents; six weeks, 22 cents; succeeding months, 12 cents.

Cheese, per box: One week, 3 cents; two weeks, 4 cents; one month, 7 cents; six weeks, 11 cents; succeeding months, 6 cents.

Eggs, per 30-dozen case: One month, 10 cents; season, 40 cents.

Meats, per pound, chilled: First month, one-fourth cent; succeeding months, one-eighth cent; per pound frozen, first month, three-eighths cent; succeeding months, one-eighth cent.

Barrel meats, per barrel: One month, 15 cents.

Poultry, per pound: First month, three-eighths cent; succeeding months, one-eighth cent.

Vegetables, per bag: First month, 7 cents. Per barrel: First month, 12 cents; succeeding months, 10 cents.

The manager receives a subsidy from the Dominion Government of 30 per cent of the cost of construction and equipment, payable in installments, as follows: Fifteen per cent immediately on completion; 7 per cent at the end of the first year; 4 per cent at the end of the second year; and 2 per cent at the end of the third and fourth years, provided that the suitable temperatures are maintained.

California Grapes in Eastern Markets.

The packing of California table grapes in redwood sawdust for eastern markets (mentioned in Consular and Trade Reports for June 25, 1912, Apr. 21, 1914, and Jan. 15, 1915), costs 90 cents per 35-pound keg, says the State Board of Viticultural Commissioners. Freight and refrigeration to Chicago total 71 cents per keg. Last season some of these grapes sold as high as \$2.50 per keg f. o. b. California, though prices fluctuated considerably.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Flour, coffee, soap, and sugar, No. 18341.—This Bureau is in receipt of a letter from a business man in Mexico requesting the names of American dealers in flour, coffee, soap, and sugar. Further information may be obtained by addressing this Bureau.

Cement, iron and steel, etc., No. 18342.—A commercial agent of this Bureau reports that a gentleman from Brazil is interested in acting as a traveling salesman and commission agent in Brazil for a number of different American manufacturers. He is particularly interested in Portland cement, iron and steel, electrical supplies, glassware, colors, hardware, and wire.

Whisky, canned goods, gasoline, etc., No. 18343.—A business man from Argentina, now in New York, informs a commercial agent of this Bureau that he wishes to represent American manufacturers and dealers in whisky, canned goods, gasoline, alcohol, stationary supplies, printing material, hardware, corks, and barrels for wine. References given.

Filcs, rasps, saws, etc., No. 18344.—A firm in Switzerland desires to communicate with American manufacturers of files, rasps, saws, and other similar articles. Catalogues, price lists, and terms are solicited. References given.

Overalls, black shirts, etc., No. 18345.—A representative of a firm in Denmark wishes to be placed in touch with American manufacturers of overalls, suspenders, and black cotton shirts for workmen and firemen. Terms, cash against documents at New York.

Oil, paints, coke, No. 18346.—The American consul general in Chile submits copies of the *Diario Oficial* calling for bids on oil, paints, varnishes, and coke for Chilean State Railways. Copies may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices. (Refer to file No. 65604.)

Apparatus for making absorbent cotton, etc., No. 18347.—An American consul in the Near East reports that he has an inquiry for the names of firms in the United States making machines for preparing, making, and packing medicinal absorbent cotton.

Machinery, No. 18348.—A business man in Italy has requested the American consul to place him in touch with American manufacturers of machinery for making glove fasteners. A sample of the type of fastener to be made is submitted with the report, and may be examined at the Bureau or its branch offices. Terms, cash. (Refer to file No. 65368.)

Caustic soda, No. 18349.—One of the largest soap factories in Norway would like American quotations on caustic soda. The firm is also interested in prices of other articles needed in the soap industry such as potash, lye, and ammonia alkali soda ash. Cash terms are acceptable. Correspondence may be in English. References given.

Telephone wire, No. 18350.—An American consular officer reports that a Norwegian telephone company wishes to purchase 3,000 kegs (6,613.86 pounds) of sillicum bronze wire, the diameter of the wire to be .051181 inch in width with 40 per cent minimum conductivity, and 70 kegs (154,3234 pounds) minimum breaking strain per square .03937 inch, the wire being according to British post-office inspection. It is stated that the company is absolutely reliable.

Porcelain tableware, No. 18351.—An American consular officer in Colombia reports that there is a shortage of porcelain table ware in that country, and suggests that if American manufacturers can put this ware on the market for prices ranging from \$14 to \$18 per set of 99 pieces, there is in all probability a good market here.

Carpet yarn, No. 18352.—A carpet firm in Switzerland requests American consular officer to place him in communication with American spinners in a position to deliver carpet yarns, such as Manila and Mauritius yarns. It states they have heretofore procured these yarns in shipments of 772 pounds for each number; for the wool Nos. 150, 450, and 600, and for the warp Nos. 600, 1100, and 1200. Quotations c. i. f. European seaport, cash against documents. Correspondence preferably in German.

ENGLISH WOOL AVAILABLE.

[Cablegram from Consul General Robert P. Skinner, London, England, dated Sept. 17.]

Notice is given by the British War Trade Department that 125,000 bales, including 50,000 bales English wool, can be spared. Applications for licenses to export crossbred and similar wools to United States will be considered. Understanding is that all wools for American use must be consigned to United States Textile Alliance.

PRIZES THROUGH ONTARIO SAFETY LEAGUE.

[Consul Julius D. Dreher, Toronto, Canada, Sept. 16.]

With a view to educate children with regard to their safety the Ontario Motor League has offered, through the Ontario Safety League, cash prizes for the best composition upon "How Children May Help to Avoid Motor Accidents." The contest is open to children in the public, separate, and private schools of Toronto, Hamilton, Ottawa, and London, Ontario. There are two classes of prizes offered—for scholars under 12 and over that age. The eight cash prizes in each class range from \$1 to \$10.

LIMITED VALENCIA ORANGE CROP.

[Consul Claude I. Dawson, Valencia, Spain, Sept. 1.]

The consensus of opinion is that the 1915 orange crop in the Valencia district is of excellent quality but limited in quantity. The fruit is generally sound and comparatively free from insect pests, while the percentage of large sizes is high, which is in marked contrast to last season.

In the important Alcira district there is a noticeable shortage over last year. Many orchards show hardly a fifth of the usual production, a large number about half, while nearly normal conditions prevail among the majority.

[The Valencia orange crop of 1914 was estimated at 8,000,000 cases of 165 pounds each, or equal to about 16,000,000 American boxes of oranges.]

TARIFF CHANGES IN NEW ZEALAND.

[Telegram from American Consul General, Auckland.]

Under the provisions of a Government bill recently presented to the New Zealand Parliament, the following changes in the rates of import duty prescribed by the customs tariff of 1907 were put into effect provisionally on August 27, 1915: Kerosene, benzine, and gasoline, formerly apparently admitted free under the provision exempting from duty refined mineral oils not exceeding in specific gravity 0.870 at 60° F., are to be dutiable at 4 pence per gallon; the rate for wines containing more than 40 per cent of proof spirits is raised from 16 to 17 shillings per liquid gallon; electric generators, motors, lamps, and transformers are to be dutiable under the general tariff at 20 per cent ad valorem, instead of 15 per cent; the general rate on bicycles, tricycles, and motor cycles, and on fittings for such articles, is reduced from 30 to 20 per cent ad valorem, thus equalizing the general and British preferential rates; a rate of 10 per cent ad valorem (both general and preferential) is imposed on motor vehicles, formerly dutiable at 20 per cent ad valorem under both tariffs, and on gas, hot air, and oil engines, which were previously dutiable at 20 per cent ad valorem under the general and were exempt under the preferential tariff; chassis for motor vehicles, formerly entitled to free admission, are made dutiable under both tariffs at 10 per cent ad valorem. The rates prescribed by the British preferential tariff are applicable to products imported into New Zealand from the United Kingdom and from British colonies granting reciprocal tariff concessions.

[Upon receipt of a full report by mail, an additional article will be published on the subject. The above rates have been taken, as indicated, from a telegraphic report, and are subject to correction.]

WHALING AMALGAMATION IN JAPAN.

[Extract from Japan Chronicle of July 9, by Consul General George H. Scidmore, Yokohama; see also Daily Consular and Trade Reports for Mar. 8, 1913, and Dec. 30, 1908.]

There are now eight whaling companies in Japan with a total fleet of 31 vessels, of which 20 belong to the Toyo Hogoi Kaisha (the Oriental Whaling Co.). Off Kishu whales have become scarce, and the center of whaling operations has recently shifted northward from the waters about Kinkazan. As a matter of fact, the Oriental Whaling Co. has obtained a license for the establishment of fishing stations on Horomushiro, the northern extremity of the Kuriles, and in Taka Bay, Saghalien. Successful operations have thus become conditional upon distant expeditions, which require a large capital, and it is now reported that the eight whaling companies are considering amalgamation as a means to greater efficiency.

Classified List of Brazilian Stock Companies.

A classified list of the stock companies in the Brazilian State of São Paulo, with address and capitalization of each, has been forwarded by Consul Maddin Summers. This list, which embraces more than 150 names, may be examined at the Bureau or its branch offices. (Refer to File No. 66049.)

MORE HYDROELECTRIC POWER FOR ONTARIO.

[Consul Julius D. Dreher, Toronto, Canada, Sept. 14.]

In a report from this office on "More Electric Power from Niagara Falls" (see **COMMERCE REPORTS** for Sept. 1, 1915), it was stated that the increasing use of hydroelectric power in Ontario would soon render it necessary to obtain additional power to meet the larger demands of the Province. It is now authoritatively announced that plans for power development that will make the Hydro-Electric Power Commission of Ontario independent of all private developments and provide a supply sufficient, not only for the next few years, but for many years to come, were given final approval by the commission yesterday and sent on to the provincial government.

As outlined by Sir Adam Beck at London several months ago upon the opening of the first hydro-radial car line in the Province, the plans call for an initial development of 100,000 horsepower by utilizing the maximum head of power on the Niagara River, now undeveloped. The plants, it is understood, outline a possible supply from this source of 250,000 horsepower, and cover as well developments possible from the utilization of the Welland Canal spillways, which will add as much to the power supply of Ontario.

The plans are the result of over a year's work by the engineers of the commission, and for the guidance of the Government have been completed in great detail, with careful estimates of cost and production.

The construction of a great development plant in the Niagara district has become an urgent necessity by the rapid growth of the cheap power system in Ontario. Sir Adam Beck and his colleagues on the commission are facing the end of their present sources of supply. The 100,000 horsepower supply contracted for with the Ontario Power Co. at the Falls will soon be exhausted by the increasing demands of the municipalities, which even the big increase in the supply from new plants here and there in the Province will not meet. With the advent of hydro-radial (or rural) car lines on an important scale, the present supply will fall far short, and when that time arrives the commission must be in a position to furnish practically unlimited power.

CANADA IMPORTS FEWER EUROPEAN SARDINES.

[Consul Felix S. S. Johnson, Kingston, Ontario, Aug. 16.]

A review of the European sardine trade situation in Canada discloses these facts:

The present price quotations are from \$0.50 to \$1 higher than they were last year. Freight rates also have advanced considerably, and war insurance and the war tax increased the cost relatively more. It is estimated that all these charges have increased the cost of the European sardines by \$1 to \$1.50 a case, varying with the f. o. b. cost.

It is said that on the European coast the summer catch is just about at its height now and it is impossible to predict what the catch will be. The great difficulty at the present time is the irregularity of sailings. An effort was made by this office to place American sardines on the local market, but prices, including charges, did not for the present warrant their introduction.

NOTES FROM CHILE.

[Consul General L. J. Keena, Valparaiso, Aug. 19.]

Monthly Steamship Service Between Chile and Holland.

Notices transmitted by the consulate general of Holland in Chile state that at the end of the present month of August a monthly steamship service between Chile and Holland will be inaugurated by the Royal Holland Lloyd Steamship Co. The *Rollus* (3,950 tons net register) will sail from Amsterdam for Chile about August 30.

American Purchase of Nitrate.

According to reports published in the local press the Dupont Nitrate Co. has recently purchased in Taltal nitrate to the value of about 20,000,000 pesos Chilean paper currency (approximately \$3,250,000 United States currency).

Effect of Low Exchange London-New York.

Recent New York exchange quotations on London (\$4.645 sight Aug. 18) have given scope for discussion in governmental and financial circles as to the advisability of establishing Chilean gold currency on an independent basis.

The standard of Chilean currency is the gold peso of 18 pence sterling and in general gold appropriations made by the Government were in terms of pounds sterling. A recent American loan made to a municipality in Chile, in which the Government appropriation had been set in terms of pounds sterling, was granted in American dollars, the contract giving the pound sterling an arbitrary valuation of \$4.80 United States currency.

TRAFFIC ON THE ELBE.

[Consul Charles L. Hoover, Prague, Bohemia, Austria.]

With reference to the traffic on the Bohemian section of the Elbe for the first semester of 1915 the Prager Tagblatt for July 21 published the following statements:

The war has influenced the freight traffic on the Elbe in a high degree. Through the export embargo on articles which are transported over this waterway in normal times and through the falling off in the production of brown coal as a result of the reduced number of miners and the lack of rolling stock on the tributary railroads, the goods offered for shipment at the Elbe freight landings were materially less. In the first six months of this year the total of the goods shipped was 5,200,000 metric zentners [zentner=220.46 pounds], against 9,200,000 zentners for the like period in 1914. The reduction of the traffic therefore amounts to 4,000,000 zentners, or about 44 per cent. The largest falling off was in Bohemian brown coal, of which 4,200,000 zentners, or nearly 2,000,000 zentners less than for the corresponding months in 1914, were shipped.

Besides brown coal, the export over the Elbe was limited to comparatively small quantities of barley, malt, beans, bran, and oil cake. In January and February 100,000 zentners of barley were exported, but thereafter only a few small lots were shipped. The export of malt amounted to 40,000 zentners, against 140,000 in 1914. Furthermore, there passed through the customhouse at Schandau outward bound 90,000 zentners of beans, 30,000 of bran, and 32,000 of oil cake and linseed. The export of sugar, which generally plays an important part in the Elbe traffic, was limited to the small amount of 30,000 zentners, sent to neutral countries in January. In the first six months of the previous year there were, in comparison, 1,500,000 zentners loaded on the Elbe boats for export. The export of petroleum, which amounted to over 300,000 zentners in the first half of 1914, was cut off entirely. Further, the shipments of glassware, of which something like 50,000 zentners were shipped in the first semester of 1914, were entirely stopped. The shipment of beer also ceased, while in 1914 about 52,000 zentners were exported over the Elbe. The decrease in the export of lumber for this period amounted to over 100,000 zentners.

"GETTING ACQUAINTED" THROUGH HARBIN CONSULATE.

[Consul C. K. Moser, Harbin, China, Aug. 3.]

Trade-extension work in the Harbin district can not always follow the customary lines. Before the war the district was supplied principally with German, Russian, and Japanese goods; American goods are comparatively little known and but few American houses have made any effort to secure a market here. Difficulties in freight and shipping facilities, the low rate of the ruble during the present war, the unwillingness of American firms to extend long credits, and the unfamiliarity of Harbin firms with the language, the business methods, and the character of American trade are such as to hamper any large constructive policy in trade development.

The efforts of the Harbin consulate are therefore chiefly confined to introducing Russian firms to American firms by correspondence or American traveling representatives to local business men through personal interviews. It endeavors to be personally acquainted with the managers of every importing firm in the district. When traveling representatives come here it introduces them, interprets for them, and gives them such commercial information as may be useful or available. The result of this is that there is probably no order given by a local firm to an American house until the local firm has first consulted with this consulate as to its advisability and as to the terms that may be arranged.

Business That Resulted.

The results of trade letters and of the consulate's commercial reports are rarely reported directly and there is therefore nothing to show their actual value, except in certain cases where all the correspondence between the exporter and importer is conducted through this office. It has been ascertained, however, that in the quarter ending June 30, 1915, an order for \$25,000 worth of a well-known American shoe was placed after two weeks of daily interviews through a representative of this office. Watchcases, cocoa butter, cocoa, coffee, dried and canned fruits, roofing materials, pianos, and bicycle tubes were other American wares for which orders were placed during the quarter through the assistance of the Harbin consulate, and negotiations are pending for furnishing cranes, scales, and medical supplies to the local representatives of two important railways.

It is the aim of the Harbin consulate to assist in getting first orders placed, believing that after such introduction is accomplished the matter of subsequent orders depends upon the relations established between buyer and seller.

POPULATION OF VENEZUELA.

[Consul Homer Brett, La Guaira, Aug. 26.]

According to the census of 1891, the latest taken in Venezuela, the population was 2,323,527. Official estimates for March 31, 1915, place it at 2,812,668, the density for the entire country being 7 persons to the square mile.

During the month of March the death rate was 1.7 and the birth rate 2.3 per thousand.

REVIVAL OF ENGLISH JET TRADE.

[From the London Times.]

The war has caused a partial revival of the jet industry at Whitby. The Whitby jet trade, which in 1860 employed 1,000 men, and a dozen years later was estimated at something approaching \$500,000 in value, had fallen to very small proportions, owing to changes in fashion and to the introduction of foreign shoddy material. But the limitation of foreign trade, owing to the war, and the difficulty of obtaining sufficient black glass and other substitutes for bangles, brooches, hatpins, and dress ornaments, together with the prevalence of mourning, has created a fresh demand, and all the local workers are now again busily employed.

The decadence of this English jet industry was described by Consul Chase, at Leeds, in Daily Consular and Trade Reports of March 16, 1911, as follows:

Whitby, on the North Sea coast in this district, has been the home of the jet industry of England. Jet is still mined there and made up into ornaments for personal wear, but only to a limited extent. Fifty years ago it was a flourishing industry, giving direct employment to 1,500 people in Whitby; now not over 30 are engaged in its production, generally old people, and no others are taking it up. The price of rough jet has fallen in that time from 25 cents an ounce to from 75 cents to \$2.90 per pound.

One old Whitby worker now plies his trade in Leeds and exposes his wares for sale at the city market twice a week. He is the only one so engaged in this city. Some Spanish jet, which is harder and more brittle than the English variety, is imported into England. Fashion has decreed the disappearance of this once important industry of Whitby.

CANADIAN GOVERNMENT DEFINITION OF MIDDINGS.

[Consul Felix S. S. Johnson, Kingston, Ontario, Aug. 30.]

The Canadian commercial feeding stuffs act of 1909 recognizes two classes of feeds: First, those that have a more or less constant composition and can be defined by fixing limiting values; this class has generally been held to include bran, shorts, middlings, and so-called chop feeds. Second, those that are manufactured according to a formula devised by the manufacturer and considered as proprietary products; such feeds may be sold only under the registration number granted by the Dominion Department of Inland Revenue and are known on the market as registered stock feeds.

The limiting values fixed for shorts or middlings were determined by the analysis of a large number of samples purchased under these names, and the conclusion reached was that shorts and middlings must be regarded as practically the same thing, must have a minimum content of 15 per cent of protein and 4 per cent of fat, and contain not more than 8 per cent of fiber.

AMERICAN INDUSTRIES IN ENGLAND.

[Consul Ross E. Holaday, Manchester, England, Aug. 25.]

Among the 100 firms which have established works at Trafford Park—a 1,200-acre estate adjoining Manchester Docks—during the last 18 years are a number of American concerns. These are engaged in diversified manufacturing. An American motor car company has a chassis assembling plant with a daily output of 100 cars, and another building for constructing complete bodies for the cars. A Niagara Falls company has opened a carborundum works. A southern cotton oil company has large mills here. Two American concerns have rubber reclaiming works at Trafford Park. An English company established a glucose works here several years ago and are now, of course, competing with American manufacturers of glucose who ship to England.

[Exports of glucose from the United States to the United Kingdom, by recent fiscal years ended June 30, have been as follows: 1913, 117,809,079 pounds; 1914, 127,202,357 pounds; 1915, 99,085,151 pounds.]

A Canadian company has a register works at Trafford Park, while domestic industrial enterprises are very numerous here. An English textilose company manufactures yarn as a jute substitute out of wood pulp. Electrical cranes, electric cables, lead pipe, chemicals, etc., are produced in various factories.

The Port of Manchester Warehouses (Ltd.) have recently provided storage facilities at Trafford Park totaling 150,000 tons' capacity. Part of this is for raw cotton, which is stored in fireproof safes, erected on a new principle. In fact, the superiority of this type of cotton warehouse was so obvious that last autumn the New Orleans Harbor Board sent its engineer to Trafford Park to study it. The result is that the model cotton warehouses now being erected at New Orleans [described in Daily Consular and Trade Reports for March 19, 1914] are all on the "safe" principle.

A belt railway connects the factories in Trafford Park with the rails of the Manchester Ship Canal, and all export and import traffic is handled at the nominal charge of 12 cents per long ton. This eliminates all the cartage and handling charges which are usually payable at most English ports. Nowhere else in the United Kingdom can merchandise be handled between general cargo steamers and factories at so low a cost.

RAILWAY EARNINGS IN VENEZUELA.

[Consul Homer Brett, La Guaira, Aug. 25.]

The 12 railways in Venezuela have a total length of 860 kilometers (534 miles) and a total invested capital of 195,213,364 bolivars (bolivar = \$0.193). For the first three months of 1915 income amounted to 3,580,356 bolivars and expenditures to 1,821,622 bolivars, leaving a net operating income of 1,758,733 bolivars. Of the entire income 571,702 bolivars was from passenger traffic. Two of the smaller roads showed a net loss for the period. To complete their contracts with the Government three of the railways have yet to construct, respectively, 37 kilometers, 42 kilometers, and 23 kilometers of line.

HONOLULU TO HAVE NEW COALING STATION.

[Clipping from Pacific Commercial Advertiser for Aug. 27, transmitted by A. P. Taylor, correspondent.]

A coaling plant ten times the size of the present one will be erected by the Inter-Island Steam Navigation Co. on the Kalihi side of the harbor. A report to this effect was carried to officials of the navigation company yesterday and confirmed. It was said that they had just closed a contract for the construction of the plant with the C. W. Hunt Co. of New York City. Construction will proceed rapidly. By the time the dredging has been finished the plant material will have arrived and the towers may be erected simultaneously with the dock. It is planned to have the plant completed and in operation by July 1 of next year.

The new station will have 165,000 tons storage capacity (the capacity of the present plant being 25,000 tons) and will consist of two unloading towers, each with a capacity of 200 tons per hour. There will be a traveling bridge with a span of 160 feet, carrying coal-reclaiming machinery with a capacity of 250 tons an hour. There will be installed a coal reloading equipment to coal vessels of any size alongside the dock. The coaling berths will accommodate seven vessels alongside the pier. Six may be coaled at the same time. Any vessel that can enter the harbor can be accommodated.

At the end of the pier will be large elevated storage bunkers for immediate delivery to vessels at the dock. The coal as it passes into vessels will be weighed by a registering apparatus. The entire system will be electrically operated, including the coal transfer system with its cars. The wharf will be of the most modern and permanent type. The material in it will be reinforced concrete. The cost of the improvement is apportioned in the following manner: Land, \$350,000; dredging work, \$200,000; wharf, \$150,000 or \$200,000; plant, \$200,000 or \$250,000.

GEORGIAN CIRCUIT FOR AUTOMOBILES OPENED.

[Consul R. B. Mosher, Victoria, B. C., Canada, Aug. 23.]

The Georgian Circuit is a 500-mile scenic and utilitarian highway, and is an important step in an international good-roads movement, which has been conceived and fostered by a few far-sighted, public-spirited citizens of Victoria, Vancouver, Seattle, and Tacoma.

The circuit tour in order of leaving Victoria is as follows: Victoria, B. C., Port Angeles, Wash., Port Townsend, Wash., Olympia, Wash., Tacoma, Wash., Seattle, Wash., Everett, Wash., Bellingham, Wash., Blaine, Wash., New Westminster, B. C., Vancouver, B. C., Nanaimo, Vancouver Island, B. C., Duncan, Vancouver Island, B. C., and Victoria, Vancouver Island, B. C. This tour includes two ferry services, one between Vancouver and Nanaimo and the other between Victoria and Port Angeles.

By taking in the side trips the distance may be increased to 1,400 miles. Customs officials on both sides of the line are courteous and little or no delay is occasioned.

FOREIGN TARIFFS.

ARGENTINA.

[Boletín Oficial, July 21, 1915.]

Standards for Forage Plant Seeds.

An Argentine decree of July 5, 1915, which is to go into effect six months from that date, prohibits the importation into Argentina of consignments of alfalfa seed and other forage-plant seeds containing more than 10 grains of dodder per kilo, or those of a germinal power (valor cultural) of less than 60 per cent. Shipments of such seeds are to be analyzed by the Argentine agricultural authorities upon importation, and, if they are found not to comply with the requirements, must be returned to the country of exportation or placed in a warehouse designated for the purpose and cleaned at the expense of the importer; otherwise the consignment is to be destroyed without remuneration. The importation of such seeds is limited by the decree to the ports of Buenos Aires, Rosario, and Bahía Blanca.

[Boletín Oficial, July 22, 1915.]

Exemption of Military Firearms.

According to an Argentine decree of July 21, 1915, the exemption from import duty prescribed by the customs tariff for firearms for military use, and munitions therefor, is to be limited to firearms imported by the Government for purposes of national defense and those of a kind adopted by various foreign nations for use in their armies. Ammunition, as well as apparatus necessary for the transportation and efficient operation of such guns, is to be entitled to free admission. Under the former interpretation of the tariff provision exempting military supplies from duty, free admission was extended to guns of any model having a bore of more than 5 millimeters and a projectile of weight exceeding 5 grams, as well as to ammunition and accessories therefor. Authority must be obtained for the importation of munitions of war not consigned to the Argentine Government.

[Board of Trade Journal, Aug. 26, 1915.]

Duty on Rice.

According to a recent ruling of the Argentine Minister of Finance, "cargo" or partly cleaned rice is to be dutiable at 27 per cent ad valorem, the rate prescribed for articles not specified in the tariff, including surtax, instead of under tariff No. 119, which provides for a duty of 0.005 peso per kilo (\$0.22 per 100 pounds) on rice in the husk. Rice prepared for immediate consumption is dutiable under tariff No. 118 at 0.02 peso per kilo (\$0.875 per 100 pounds).

BRITISH HONDURAS.

[Gazette Extraordinary, Sept. 2, 1915.]

Temporary Exemptions from Duty.

Under authority conferred by the War Tariff Ordinance, 1914, the governor of British Honduras, by an order of September 1, 1915, declared the following products exempt from import duty for a

period of three months from that date: Iron roofing and guttering, including pipes and other accessories therefor; linseed oil; paints and varnishes, including driers. The suspended duty on the above articles is 15 per cent ad valorem, the rate applicable to articles not specified in the tariff.

By another decree of the same date a specific duty of 1 cent (\$0.01) per pound on lard was substituted for the rate of 15 per cent ad valorem formerly applicable.

CANADA.

[Customs Memorandum 1947B, Sept. 9, 1915.]

Prohibition of Animal Products from United States.

The regulations governing the importation into Canada of certain animal and other products, originally promulgated May 9, 1915, have been annulled, and new regulations, which are to continue in effect for three months from September 9, 1915, prescribed. The importation of animals, or of the flesh, hides, wool, hoofs, horns, or other parts of animals, as well as of hay, straw, fodder, or manure, is now prohibited from the following States and from Alaska and the District of Columbia: Alabama, Arkansas, Connecticut, Delaware, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, New Hampshire, New Jersey, New York, North Carolina, South Carolina, Ohio, Pennsylvania, Rhode Island, Tennessee, Vermont, Virginia, West Virginia, and Wisconsin. Exceptions to the above prohibition are made, as shown in the following paragraphs:

Dogs, cats, pet birds, live pigeons, menagerie or wild animals (except deer), and in certain cases horses are not subject to the above restrictions, and live poultry may be admitted when accompanied by affidavit from the shipper stating that the same is the product of a State not under Federal quarantine. One-day-old chicks are to be admitted without restriction, but importation of any poultry in crates containing hay or straw is prohibited. Cured and cooked meats, lard and tallow, and butter and eggs are to be entitled to unrestricted entry.

Dressed meats, live poultry, hay, hides, and wool will be permitted to pass through Canada in bond in sealed cars, when en route from one point in the United States to another, after satisfactory disinfection at the Canadian port of entry.

The following products may be imported when accompanied by the required certificate from an official of the Bureau of Animal Industry, United States Department of Agriculture, or other designated officer: Dressed meats, fresh or cured; dressed poultry; milk and cream; wool and hair; hay and straw for packing. Feathers securely packed and consigned to manufacturers will be admitted if accompanied by shipper's affidavit that they are not from infected premises. The importation of hides and of dressed hogs is permitted under certain circumstances.

Hides, wool, and hair from countries other than the United States may be admitted into Canada from this country when accompanied by affidavit from the shipper that the consignment is of foreign origin and has not been in contact with domestic hides.

Animals and animal products, also hay and straw, may be imported from the following States when accompanied by an affidavit showing their origin and stating that they have not been unloaded en route in any State not included in the list: North Dakota, South Dakota, Montana, Washington, Oregon, Idaho, Wyoming, Nebraska, Colorado, Utah, Nevada, California, Arizona, New Mexico, Oklahoma, and Texas. Hay (other than for packing) may also be admitted from parts of Michigan and from Vermont.

[A copy of the new regulations is on file in the Bureau of Foreign and Domestic Commerce, and will be loaned to those interested upon application.]

SALVADOR.

[Diario Oficial, Aug. 17, 1915.]

Mill Certificate for Flour Shipments.

A presidential decree of August 16, 1915, provides that consular invoices for flour exported to Salvador be accompanied by a certificate from the mill, giving the brand and the quantity and quality of the consignment, such certificate to be viséed by an agent of the pure-food authorities of the country of origin. Salvadorian consuls are instructed not to legalize invoices for flour shipments unless the above requirement be observed.

AMERICAN TYPEWRITERS POPULAR IN BURMA.

[Consul Maxwell K. Moorhead, Rangoon, Burma, July 16.]

During the fiscal year ended March 31, 1915, 317 typewriters, valued at \$16,750, were imported from all foreign countries into Burma, according to official figures supplied by the Chief Collector of Customs, Rangoon. Of this total the United States supplied 197 machines, valued at \$9,780, and the United Kingdom 113 machines, valued at \$6,540.

These figures do not fully represent the number of American typewriters imported, as many machines are brought into Rangoon from agencies in Calcutta and Bombay and are recorded in the customs returns under "All other machinery" imported from India. From statistics gathered from the sales books of principal dealers approximately 600 American typewriters were sold in Burma during the calendar year 1914, as opposed to 500 in 1913.

IMPROVING VENEZUELAN TRADE.

[Consul Homer Brett, La Guaira, Aug. 25.]

That Venezuelan merchants are adapting themselves to changed commercial conditions is evidenced by the fact that while the imports at La Guaira for the last six months of 1914 were only 7,169,990 bolivars (bolivar = \$0.193) for the first six months of 1915 they amounted to 16,000,000 bolivars.

For the first-named period merchandise to the value of 3,237,129 bolivars came from the United States, while the corresponding value for the second period was only slightly less than 10,000,000 bolivars.

During the fiscal year ended June 30, 1915, 160,606 sacks of coco and 141,793 sacks of coffee were exported from La Guaira.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Orchids and bulbs, No. 18353.—A report from an American consular officer in India states that a firm in his district desires to obtain a market for Burmese orchids and bulbs in the United States. It wishes to advertise in gardening papers and periodicals that specialize in matters pertaining to plants and flowers. It is suggested that editors of such papers send their rates for advertising.

Caustic soda, No. 18354.—A firm in Italy wishes to establish commercial relations with American firms dealing in caustic soda and other chemical products. References given.

Vegetable drugs, No. 18355.—A firm in the United Kingdom informs an American consular officer that it is in the market for large quantities of American vegetable drugs and desires to communicate with firms selling cascara bark, sassafras bark, mandrake root, ononymus bark, bayberry bark, slippery elm bark, and other similar drugs.

Piano parts, No. 18356.—An American consular officer in India reports that a firm in his district desires to communicate with American firms dealing in piano strings, wires, etc. Catalogues and price lists are solicited.

Paper, pencils, and ink, No. 18357.—A report from an American consular officer in Greece states that a local firm desires to be placed in communication with American manufacturers of white paper not of wood pulp, white paper of wood pulp, white paper for newspapers, cellulose paper glazed on one side, paper for posters, paper for making different kinds of envelopes, pencils, ink, and erasers. It is requested that samples of these papers, together with dimensions and quotations, be forwarded at once, as American paper is practically unknown in that market. Quotations should be, preferably, c. i. f. Patras or f. o. b. New York.

Household specialties, No. 18358.—An American consular officer in South Africa transmits the name of a man who desires to secure the sole agency and representation of American manufacturers of household specialties. Catalogues, price lists, and literature are requested. Correspondence may be in English.

Stationery, No. 18359.—An opportunity exists for the sale of American stationery, printed and lithographed, in South Africa, according to a report submitted by an American consular officer. Large business firms have requested that catalogues, price lists, and other literature be sent at once. Samples showing the character of the work required, but which must be of a better quality, is submitted. (Refer to file No. 64975.)

Glassware, No. 18360.—A traveling salesman in France would like to be placed in direct communication with American manufacturers of glassware with a view to becoming an agent. He is particularly interested in lamp chimneys and an illustration of the kind desired is submitted with the report, and may be examined at the bureau or its branch offices. (Refer to file No. 64784.) Correspondence should be in French.

Match-making machinery, No. 18361.—A man in the Far East informs an American consul that he contemplates building a match factory, and desires that American manufacturers of match-making machinery send catalogues, price lists, and any other literature of interest.

Photographic paper, No. 18362.—There is a demand in Italy for photographic paper, samples of which have been forwarded by an American consul, and may be inspected at the bureau or its branch offices. (Refer to file No. 65369.) Samples and prices, c. i. f. Naples, should be furnished the consulate.

Electrical supplies, No. 18363.—A report from an American consular officer in Spain states that a firm is in the market for metal parts for electric light bulbs manufactured by American firms. Prices and catalogues are requested immediately. Correspondence should be in French or Spanish.

Nickelin and plated copper sheet, No. 18364.—A company in Switzerland engaged in the manufacture and sale of plumbing and sanitary supplies, central heating, etc., has requested an American consular officer to place it in communication with American manufacturers of nickelin and plated copper sheet; that is, copper sheet rolled with nickel (not electro-nickel plated), such as is used in the manufacture of scullery sinks. Correspondence may be in English.

Drugs, etc., No. 18365.—An American consular officer in Japan reports that a firm desires to import industrial drugs and raw materials for paper manufacture. It states that if favorable connections can be secured business will be transacted on a basis of confirmed letters of credit.

Coal, No. 18366.—A firm in Chile desires to communicate with American exporters of coal suitable for household use. Imports will be made, if qualities and prices are suitable, in cargo lots. The firm is disposed to place a sample order for 500 tons at once. It is stated that steamers arriving at Chilean ports with coal would have no difficulty in obtaining return cargoes of nitrate or minerals for the United States.

General merchandise, No. 18367.—An American consular officer in India reports that a firm of importers and commission agents desires to correspond with American manufacturers of glassware, glass beads, cutlery, toys, imitation gold and silver thread, bronze powders, papers, and sundry goods. Correspondence may be in English.

Fiber boards, No. 18368.—A report from an American consular officer in the United Kingdom states that a British manufacturer desires to obtain various qualities of grained fiber boards. Firms interested should submit samples and prices. Samples of the fiber boards desired may be inspected at the Bureau or its branch offices. (Refer to File No. 65593.)

Epsom salt and magnesium sulphate, No. 18369.—A commission firm in Portugal is in the market for large quantities of epsom salt and magnesium sulphate. Terms cash against documents, and firm desires telegraphic offers through the American consulate. References given. Correspondence may be in English.

ALGERIA'S FRUIT PRODUCTION.

[Consul Dean B. Mason, Algiers, Aug. 18.]

No statistics are compiled nor estimates made by the Algerian Bureau of Agriculture as to the production of citrus fruit in this colony, and since an important part of the crop is raised by small growers for local consumption, it would be extremely difficult to obtain even approximately accurate private information on this subject.

The only statistics as to Algerian citrus fruit relate to the quantities exported and are furnished by the customhouse. These showed shipments of 10,154,940 pounds of mandarins and 4,387,420 pounds of oranges and lemons during 1914; in 1913 the corresponding figures were 10,579,100 pounds and 4,174,675 pounds. With the exception of 1,100 pounds of mandarins which were exported to foreign countries the citrus fruit shipped from Algeria in 1914 went to France.

Since many of the citrus trees in Algeria are scattered in gardens, orchards, and fields, no statistics as to area planted are kept.

Improvement of Philippine Copra.

The new committee appointed by the executive government at Manila to study the copra or coconut-meat industry in the Philippines is making its investigations. Attention has been called to the higher quality of copra produced in Ceylon, and it is estimated that if the Philippine copra were cured as carefully it would bring \$1,500,000 more income.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Navy Department supplies, No. 2632.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., until October 5, 1915, for the following material: Bidders should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 8760, tinned salmon, and crated tea in half chests; schedule 8777, duster brushes, dust and floor-sweeping brushes, and paint brushes; schedule 8778, angles, bar, channels, and sheet steel; schedule 8779, emery cloth, lard oil, padlocks, and ships' fishing seines; schedule 8780, geared head lathes, 18 inches by 8 feet and 16 inches by 6 feet; metal boring and turning mill, 12 feet, and trimming press; schedule 8781, turntable lathe, 24 by 26; schedule 8782, upright drills, 21 inches; double emery grinders, 12 inches; screw-cutting engine lathes, and crank shapers, 16 inches; schedule 8783, white ash, basswood, beech, cedar for boat builders' use, Port Orford cedar, white cedar, cypress for boat building, Louisiana red cypress, Douglas fir, common hickory, laurel, mahogany, white oak, North Carolina pine, yellow pine, yellow poplar, and redwood; schedule 8784, steel tanks, 8 feet by 6 inches, and metal-file units; schedule 8785, wheat flour in export bags; schedule 8786, salt; schedule 8788, rubber gaskets, test pumps, gimbal rings, and special square-hole socket wrenches; schedule 8789, chain cable; schedule 8790, seamless drawn-steel pipe; schedule 87895, paint brushes, rubber hose, 2½ inches; rubber hose to wash deck, 1½ inches; motor-boat lights after range; white sail cotton thread, 4-ply flax twine; and brass valves for hose gate; schedule 8796, alcohol in tank cars, drop black in oil, Prussian blue in oil, lampblack, white lead in oil, litharge, amber-colored mineral oil, and whale oil; schedule 8797, fog bells for power boats, emery cloth, expanders for hose couplings, scaling hammers, copper-cut nails, long-grain spelter solder, and steel wire rope thimbles; schedule 8798, wrought iron for blacksmith's use and steel floor plates; schedule 8799, clear cypress, firsts and seconds; hickory, firsts and seconds; sound oak, yellow pine, No. 2; white pine, No. 2; Virginia pine and N. C. partition pine; schedule 8800, A. C. fans, 110 volts, 60 cycle; rubber-covered wire, solid and single; lighting and power duplex wire; and ship-lighting cable; schedule 8801, galvanized steel conduits, interior communication cable, telephone cable, single-conductor plain cable, double conductor wire, plain twin-conductor wire, and leaded and armored twin-conductor wire; schedule 8802, hydraulic turbine tube cleaners, and check, angle, globe brass valves; and schedule 8803, fine Albany, Jersey fire, Lumberton molding, heavy molding, light molding, and iron core sand. Bids will be received until October 12, 1915, for the following articles: Schedule 8761, tinned prunes; schedule 8765, main revolution and secondary, and revolution log and register counters, torsion meters; schedule 8766, electrically-driven pumps and valves; and schedule 8767, electric-traveling 20-ton crane and foundry crane; schedule 8787, steel-wire rope, ¾ inches, and double-purchase winches; schedule 8791, flour in export bags, flour in tins; schedule 8792, Class A steel and Class B steel; schedule 8793, rubber ferrules for tables, etc., garden hose ¾ inches, sheet lead, and water-closets for ships; schedule 8794, loofa sponges; and schedule 8804, auxiliary condensers, boiler injectors, single-acting air pumps, fuel oil pumps, and feed fire pumps with valves. Bids will be opened October 19, 1915, for schedule 8762, tinned peaches and tinned pears.

Construction work, No. 2633.—Sealed proposals will be received at the Office of the Supervising Architect, Treasury Department, Washington, D. C., until October 13, 1915, for the construction complete (including mechanical equipment, lighting fixtures, and approaches) for the United States post office at Naugatuck, Conn. Drawings and specifications may be obtained from the custodian of the site at Naugatuck or at the Washington office.

Riprap bulkhead, No. 2634.—Sealed proposals will be received at the office of the lighthouse inspector, Tompkinsville, N. Y., until October 4, 1915, for furnishing labor and material for building a riprap bulkhead wall and making repairs to the jetty at Point Comfort Light Station, Keansburg, N. J. Blank proposals and particulars may be obtained by addressing the above office.

Construction work, No. 2635.—Sealed proposals will be received at the Supervising Architect's office, Treasury Department, Washington, D. C., until October 7, 1915, for the construction complete (including mechanical equipment) of medical officers' quarters at United States Marine Hospital, Wilmington, N. C. Drawings and specifications may be obtained from the custodian at Wilmington or at the Washington office.

FRENCH FIRMS COMBINE IN EXPORT CATALOGUE.

The Bureau of Foreign and Domestic Commerce is in receipt of an export catalogue of French industries which should prove of great interest to American manufacturers and importers, as it shows the great energy of the French manufacturers and their determination to stay in the export field notwithstanding the great difficulties caused by the European war. The catalogue contains announcements in detail of 548 manufacturers from all parts of France. It advertises 1,602 different kinds of articles, and almost all the announcements and advertisements are printed in three or four languages. Some are even printed in eight languages, including Greek, Japanese, and Chinese. Notwithstanding the general standstill of business, owing to the war, the catalogue, which in its 1913-14 issue contained only 191 pages, contains 247 pages in its 1915 edition. It forms an excellent guide to French manufacturers, and may be consulted at the Bureau or its branch offices.

VEGETABLE SOAP FOR THE MOROS.

In a recent communication to Gov. Carpenter, of the Department of Mindanao and Sulu, the Philippine Manufacturing Co. states that the company "is now in a position to supply you with soap to meet the requirements of the Moros. We are taking special care in the manufacture of this soap, which we guarantee to meet all the requirements of the people of your country in so far as their religion and other considerations are concerned." The use of animal fats by Mohammedans is forbidden.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 406 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

A new hosiery manufacturing enterprise at Derby, England, is reported by Consul Hitch; it is the Derwent Hosiery Co., Ltd., capitalized at \$100,000.

GROUSE SHOOTING IN GREAT BRITAIN.

[Consul Augustus E. Ingram, Bradford, Aug. 19.]

The 12th of August is the opening day for the grouse-shooting season, but this year there has not been the usual rush to the Yorkshire moors and to Scotland. Many of the large shootings, especially in Scotland, have not been let, and even where proprietors have been successful in securing tenants they have had to accept considerably lower rents.

In order to prevent overstocking of the moors, which is apt to result in damage being done to crops by the game and also in the spread of disease among the birds, the House of Lords introduced a bill to open the season earlier than the established date, but it did not become law. Lord Lovatt, speaking in the House of Lords, said that the total grouse rents of Great Britain amount to nearly a million pounds sterling (\$4,866,500) per annum, and "over and above that the amount spent by strangers, who are often foreigners, is probably an equivalent sum. The rental per acre of grouse moors is often ten times as much as the rental per acre for grazing."

Donated to Charity—Effect on Crops.

It is said that in an average year about 2,000,000 grouse are killed, and at a time like this when prices of meat have risen so considerably it would be wrong to allow such a supply of food to be wasted. Moreover, in many instances wise and charitable arrangements for the disposal of the birds have been made, the King, for example, having given orders that all game killed on his own moors, with the exception of that required by the Royal household, shall be distributed among the naval and military hospitals.

In regard to the suggestion that the curtailment of shooting might result in an unusual number of birds to prey on farmers' crops, it is perhaps of interest to state that complaints of such damage in Yorkshire have been rare. Grain-eating birds like the pheasant and partridge are not preserved to so large an extent as grouse. The grouse keep closely to the great tracts of heather on the moors and offer little or no menace to farm crops.

JAPANESE INTEREST IN CHINESE CURRENCY.

[Extract from Japan Times of Aug. 10, by Consul General George H. Scidmore, Yokohama.]

A petition is reported to have been filed by some sections of the Japanese business men interested in Manchuria and Mongolia with the Ministers of Finance and Agriculture and Commerce for the unification of currency in those Provinces. For some time past they have been conferring among themselves as to the improvement of the chance presented by the conclusion of new treaties between Japan and China, as a result of which the petition has apparently been lodged with the two ministries. In the statement presented it is said to have been stated that the irregularity of the currency system in China, the northern Provinces in particular, is one of the greatest obstacles in the way of the Japanese merchants who desire to have to do with those two northern divisions of China.

AMERICAN DRUGS IN HONGKONG.

[Consul General George E. Anderson, Hongkong, Aug. 4.]

There has been a material increase in the import of American drugs and various of the finer chemical products into Hongkong within the past few months, and the indications are that this trade may be further increased materially. The import of drugs into China is very heavy. In 1914 medicines were imported into China to the value of \$2,756,356, and chemicals, not including dyes and paints and the like or match-making materials or soda, were imported to the value of \$280,535. Of the medicines, about 60 per cent were imported through Hongkong, while of the chemicals the largest share came direct from Germany. Of both medicines and chemicals an increasing share has been coming from Japan. There is also a large import of all such goods into Hongkong for export to other parts of the Far East than China, perhaps a quarter of a million dollars gold covering this additional trade into or through this port.

High Grade and Cheap Goods.

Of the imports of medicines into China other than Hongkong Japan furnished nearly half, and this fact illustrates the situation in the general drug trade of Hongkong and south China at the present time. The United States has had a fair share in this trade, directly or indirectly, for a number of years, but the American goods are of high grade and are made for the higher class trade only. A very large share of the American goods are imported through London export houses and are credited to Great Britain in trade returns. A large share of the goods imported from Japan also are directly or indirectly or partially of American manufacture.

However, there remains in the trade a line of demarcation quite plain between high-grade goods made for the better class trade and a much cheaper line of goods which are sold to the Chinese trade in China and for the use of native peoples generally, including the Filipinos in the Philippines, where a large share of Japanese drugs and chemical products have been introduced by the sheer force of cheapness, without regard to quality of the products. This cheap line of goods is being manufactured in Japan in largely increasing quanti-

ties. Considerable quantities of cheap drugs and chemical products were imported from Germany before the war which Japan now is attempting to supply.

Of the better grade goods, also obtained from Germany before the war, the United States now has much the larger share, though the goods are being bought at greatly enhanced prices over those obtaining in Germany or even in the United States before the war. Great Britain is supplying some lines of drugs and chemicals not of British manufacture before the war, but the larger share of the changed trade has gone to American manufacturers. The chief problem in connection with it is as to the line of cheap products turned out by Japanese concerns and the difficulty of meeting competition among native peoples with high-grade goods, whose real value and real economical nature are not appreciated by ignorant and susceptible buyers.

Classes of Goods in Demand.

The United States is now being called upon for salicylic acid, carbolic acid in its various forms, opium preparations, and preparations like lysol and sanatogen, aspirin and phenacetin, sulphate of copper and other copper preparations, silver preparations, acetate of lime in various forms, preparations of lead of various forms, potash combinations, ammonia in various forms, heavy alkalies, and all similar goods. Citric and tartaric acids, tannic acid, cod-liver oil and its preparations, alum, sulphuric acid, hydrochloric acid, chloride of lime, Epsom salts, and similar goods, which heretofore have always been bought in Great Britain by Hongkong importers, are now being obtained from the United States, where they can be had at all. American firms now have about all the trade in quinine, the supply of which the United States at present seems largely to control. It also has about all the trade in santonine, since aside from the United States the chief source of this drug is Germany, where it is made from materials obtained in the country about the Black Sea.

The United States also is called upon to supply saltpeter and sulphur, although Japan is supplying a considerable quantity of both, and in nearly all of the above lines Japanese manufacturers are attempting to secure trade. Japan is exporting menthol, camphor, iodine, and many similar preparations, and announcement is made of the organization of a large concern by Tokyo and Osaka drug manufacturers for the manufacture of aniline salts, aniline dyes, and similar goods under governmental aid. It is also proposed to organize for the manufacture of iodide of potash, glycerin, and similar goods which are now imported largely from the United States.

Disinfectants and Pharmacists' Supplies.

American manufacturers of disinfectants are securing an increasing trade. American disinfectants have been sold in South China in small but increasing quantities in the past few years, British disinfectants constituting the bulk of the trade. As a result of interference with the supply of these British preparations, however, as well as of the extraordinary demand for some of them in the war area, there is a strong demand for certain classes of American prepara-

tions of this sort, and apparently a considerable field is open for trade exploitation.

There is a strong demand for supplies from the United States of all sorts of pharmacists' supplies, such as test tubes, funnels, beakers, and various special bottles. Japanese manufacturers are supplying the cheap trade in these lines, but Hongkong importers and retailers report that their goods are not reliable and are not economical in the long run at even a low price. American goods are being imported quite generally at present. The South China market is an open one in all such goods, and American manufacturers undoubtedly have the opportunity of not only securing increasing business, but also of securing a permanent hold on this market.

INCREASED PRICES FOR EPSOM SALTS.

The sudden falling off in the imports of Epsom salts beginning with the fourth quarter of the fiscal year 1915 has resulted in a marked increase in prices. The wholesale price in New York on September 13 ranged from \$4.50 to \$6 per 100 pounds, as compared with the normal quotation of \$1 to \$1.10 before the war started.

For the first nine months of the fiscal year 1915 the receipts of Epsom salts were nearly normal, but in spite of this fact prices were maintained at a very high level. As early as August 17, 1914, \$3 to \$3.25 per 100 pounds was asked in New York, or three times what had been asked a few weeks previous. The confusion in shipping caused by the sudden outbreak of the war and the anxiety of manufacturers to be prepared for a possible cessation of imports probably account for the sudden rise in prices, and in spite of nearly normal receipts during the ensuing nine months these high prices were not affected.

Shipments of the salts almost ceased during the fourth quarter of the year as a result of new restrictions imposed on the commerce of the country in which most of the supplies originate. Receipts in this country dropped from 2,777,361 pounds for January, February, and March to 1,680 pounds in April, May, and June, and prices accordingly jumped. The total receipts for the fiscal year 1915 were 7,005,596 pounds, as compared with 11,975,693 pounds in 1915.

Epsom salt is a hydrous sulphate of magnesia found native in the kieserite of the Strassfurt salt beds, as epsomite in France, Spain, Chile, Indiana, Kentucky, and Tennessee, and also in certain mineral waters. Kieserite, however, the principal source of supply. The salt is used in medicine, in agriculture, in the process of warpsizing cotton, and for dyeing with aniline colors.

ADDITIONS TO SPANISH EMBARGO LIST.

[Telegram from Vice Consul H. N. Cookingham, Barcelona.]

The exportation of the following products from Spain has been prohibited by a decree of August 24, 1915: Hemp of various kinds; wool and cotton waste; ammoniac; refined plumbago; tungsten; superphosphates of lime and other mineral fertilizers; charcoal; beet seeds.

FIRST NATIONAL EXPOSITION OF CHEMICAL INDUSTRIES.

[Commercial Agent Thomas H. Norton.]

The First National Exposition of Chemical Industries, opened at the Grand Central Palace, New York City, on September 20, is a distinctly notable event in the evolution of American industrial life. Expositions of this branch in other countries have been of the greatest value in developing a solidarity of interests among chemical manufacturers in bringing them more closely in touch with producers of raw materials, with novel devices and perfected methods, with designers of improved mechanical accessories, and finally with the consumers of finished products. Such occasions have been stimulating, suggestive, and inspiring, showing where national resources have been neglected, where the needs of domestic consumption have been overlooked, or only inadequately met, and, on the other hand, where difficulties and obstacles, physical, technical, or commercial, have been vanquished by the intelligent application of scientific fact and theory, or by the happy combination of pluck, daring, and skillful adaptation.

This first gathering of our country's technical chemists for a comprehensive presentation of their achievements in meeting the Nation's demands for an enormous variety of products that fall technically into the category of chemicals will unquestionably be highly educative. It shows marvelous accomplishment in certain fields; in others it reveals a lack of enterprise in utilizing effectively and fully the magnificent treasures of our mines, forests, fields, and streams.

The visitor at the exposition will note how admirably the wonderful sulphur deposits of Louisiana are exploited and utilized, the extent and perfection of our manufacture of acids, especially of contact sulphuric acid, and the completeness of our petroleum industry. At the same time he will see how we have almost totally neglected the vast stores of potash stored annually in the kelp crop of our Pacific littoral, and send \$10,000,000 abroad to purchase products of the Stassfurt mines.

He will note likewise that we waste coal-distillation by-products valued at \$100,000,000, while we remit \$10,000,000 annually to Germany for the purchase of the varied tints demanded by our textile and allied branches.

He will learn that mountains of sawdust accumulate about the saw-mills of the Northwest, while we import annually from Germany over \$400,000 worth of oxalic acid, which could so easily be manufactured from the waste sawdust.

Governmental Assistance to Chemical Industries.

The National Government early recognized the importance of furthering in every possible way the evolution of a chemical industry. This has found concrete expression in a number of bureau organizations. The chief instrumentalities in this connection are the Bureau of Mines and the United States Geological Survey, in the Department of the Interior; the Bureau of Animal Industry, the Bureau of Plant Industry, the Forest Service, the Bureau of Chemistry, and the Bureau of Soils, of the Department of Agriculture; and the Bureau of Standards, Bureau of the Census, and Bureau of Foreign

and Domestic Commerce, of the Department of Commerce. Of the bureaus in the Department of Commerce, the Bureau of Standards has for its main purpose the standardization of the mechanical accessories, the processes, and the products of these industries; the Bureau of Foreign and Domestic Commerce brings the producer of raw materials into touch with the manufacturer, and the latter into relations with the consumer, through its studies of markets and trade opportunities at home and abroad; and the Bureau of the Census is the national bookkeeper of the industries.

Exhibits by Government Bureaus.

Early in the past summer it seemed eminently desirable that the many-sided activities of our National Government in furthering the development of the various chemical industries should be comprehensively displayed by a collective exhibit of the above-mentioned bureaus in the first national exposition of this branch. A meeting was held in the office of the Chief of the Bureau of Foreign and Domestic Commerce, at which 14 delegates from the bureaus mentioned above were present. The manager of the exposition was in attendance and outlined at length the objects and features of the undertaking.

As a result of this gathering, steps were taken by the different bureaus to participate in a collective exhibit which should clearly reveal the many ways in which departmental agencies are aiding the technical chemist, seeking raw material, perfecting methods and mechanical appliances, testing his products, and seeking markets for them in every quarter of the globe.

The Geological Survey has prepared an elaborate exhibit of charts, transparencies, and mineral specimens, displaying in manifold variety the natural resources of the land available as raw material for the manufacturing chemist. This emphasizes the extent and variety of our mineral resources, as yet scarcely utilized by domestic chemical works, or sent abroad to return to us in the form of purified and valuable compounds, essential to a variety of industries.

The exhibit of the Bureau of Mines includes an imposing display of the means employed to insure the safety of the miner. The general public will probably gather in throngs to witness the complete exposé of the fascinating process, devised by Dr. Rittman, of the Department of the Interior, for transforming almost worthless petroleum residues at will into volatile gasoline for motor engines, or into benzol and toluol, now employed on so vast a scale for the manufacture of high explosives. Other exhibits illustrate the work of the bureau in producing the raw metal radium from American carnotite, at a cost far below that required by current methods of preparation in Austria and France; in studying the technology of petroleum, and in investigating the clays of the South.

The exhibit of the Forest Service displays the remarkable results obtained from its laboratory at Madison, Wis., in producing a pure, brilliant, yellow dyestuff from the Osage orange, growing in such profusion throughout the valley of the Mississippi, notably in Texas and Oklahoma. This forms a most valued addition, at this period of dyestuff scarcity, to the coloring materials available for tinctorial purposes. Of great interest are also the exhibits of the most effective methods for turning various American woods, besides spruce, into

pulp for paper manufacture and for preparing silk and cellulose products from woods.

The Bureau of Chemistry exhibits the novel and fascinating process recently devised for concentrating and separating fruit juices by partial freezing of the liquids in which they are present; much material illustrative of paper making; the development of standards and inspection of naval store supplies; the utilization of various waste products; tanning materials; demonstration of the wearing quality of sole leather; recovery of tanning waste; denaturing and utilization of egg products in tanning operations.

The chief exhibits of the Bureaus of Plant Industry and of Animal Industry are those illustrating the manufacture of essential oils and of casein.

The elaborate exhibit by the Bureau of Soils of everything connected with the extraction of potash salts from the kelp of the Pacific coast will attract the attention of great numbers, on account of the keen interest now felt throughout the entire country in a satisfactory solution of the problems connected with assuring a domestic supply of this most important class of salts.

The exhibit of the Bureau of the Census comprises a complete set of the publications and bulletins portraying, at quinquennial periods, the status and condition of the various chemical industries.

The exhibit of the Bureau of Standards is the most complete and extensive of any of the departmental agencies. It illustrates in detail the varied activities of the Bureau in standardizing methods and accessories in the manufacture of iron and steel, nonferrous metals, cement and concrete, lime and plaster, ceramics and glass, bituminous materials, paint and varnish, mineral oils, gas, textiles, paper, ink, rubber, sugar, refrigeration, electrochemical industries, and laboratories in general. Many types of apparatus will also be shown, such as thermometers, pyrometers, volumetric apparatus, calorimeters, saccharimeters, gas and water meters, etc. Samples of various materials and illustrative methods of testing or purification form prominent features.

The exhibit of the Bureau of Foreign and Domestic Commerce shows the chemical trade the highly perfected methods for collecting, filing, and communicating trade information. An official of the New York branch office is in constant attendance, explaining to all visitors the many facilities offered by the mechanism of the Bureau for bringing to the attention of chemical manufacturers the opportunities for extending their trade to all quarters of the world, and for securing such information from foreign lands as may be helpful in improving and expanding their respective branches. There is a complete exhibit of the many publications of the Bureau, which record the statistics of our domestic and foreign trade or present in full detail the data desired by all branches of industry and commerce on foreign markets and condition.

Value of Bureau Publications.

The Bureau of Foreign and Domestic Commerce has devoted special attention to monographs upon chemical subjects. Among these are reports on "The Utilization of Atmospheric Nitrogen," "The Chemical Industries of Belgium, Holland, Norway, and Sweden," "Cottonseed Products," "Dyestuffs for American Textile and other Indus-

tries," "Foreign Trade in Denatured Alcohol," "Foreign Trade in Paints and Varnishes," "Foreign Salt Market and Industry," "South American Market for Soap," "Some Aspects of the Iron and Steel Industry in Europe," "The Sugar Industry," "The Pottery Industry," etc.

Much attention has been devoted by the Bureau to the acute conditions now prevailing in the dyestuff industry and to the means of mitigating its hardships, as well as of freeing our textile and other interests from the nearly complete dependence upon dyeing materials of foreign origin. In this connection there is a full display of samples of the new colors recently invented in the United States, and first brought to the attention of dyestuff consumers by the Bureau. There is an extensive collection of samples of various chemical products, illustrative of the investigations organized by the Bureau and now under way to ascertain clearly and definitely to what extent the United States is dependent upon foreign countries for its supply of chemicals, to what degree American raw material is available for the domestic manufacture of such chemicals, and whether the time is not opportune to seek aggressively foreign markets for products of our domestic chemical works. The Bureau is responding to a public sentiment that the time is ripe for the evolution of a complete, comprehensive, genuinely American chemical industry.

The value of the daily *COMMERCE REPORTS* to the manufacturing chemist and the dealer or exporter of chemicals has not yet been fully appreciated by this branch of industry. Almost every issue contains something of value in this line.

Lectures, Addresses, and Sessions of Chemical Societies.

The exposition was to have been opened on the evening of September 20 by Secretary Redfield of the Department of Commerce. As it was found impossible for Secretary Redfield to leave Washington at that date, Dr. Pratt, Chief of the Bureau of Foreign and Domestic Commerce, was delegated to represent the Government on this occasion. A prior engagement at Denver, Colo., unfortunately prevented Dr. Pratt from being present. He will, however, deliver the address closing the exposition on September 25, choosing as his topic, "Opportunities for American Chemical Industry."

In addition to the many varied features of the exposition, offered by numerous illustrative operations of chemical technology, continuously demonstrated, there is a very full program of meetings of various chemical bodies and addresses by men of national prominence. The following is the full program:

MONDAY, *September 20.*

Opening day.

TUESDAY, *September 21.*

Howard Gross, president of the Tariff Commission League: "Tariff question."

Linn Bradley, the Research Corporation: "Solution of the smoke, dust, and fume nuisance by electrical precipitation."

D. T. Pierce, Barber Asphalt Co.: "Asphalt" and "The brownian movements of the colloids of Trinidad asphalt."

Harrington Emerson, the Emerson Co.: "Efficiency in the conservation of our national resources."

Meeting of the New York section of the American Electrochemical Society.

WEDNESDAY, *September 22.*

Frederick W. Keough, National Association of Manufacturers: "Accident prevention in the chemical industries."

Welding Ring, president of the American Exporters' Association: "Transportation and shipping facilities with foreign countries."

J. L. Lightner, Hershey Chocolate Co.: "The manufacture of chocolate."

Thomas H. Norton, Department of Commerce: "Foreign markets for American chemicals."

I. F. Stone, president of the National Aniline & Chemical Co.: "The aniline-dye situation."

THURSDAY, *September 23.*

J. L. Taylor, Bureau of Explosives: "Explosives."

H. A. Huston, German Kali Works: "Potash."

G. B. Heckel, New Jersey Zinc Co.: "Paint."

Robt. L. Frink, President of the Frink Pyrometer Co.: "The Relation of Chemistry and Mechanical Manipulation to the Evolution of the Glass Industry."

Charles V. Bacon, Consulting Chemist: "Manufacture and Uses of Vegetable Oils."

Geo. Frank Lord, DuPont DeNemours Powder Co.: "Chemical Effect of Dynamiting the Soil."

Percy Wilson, Secretary Association of American Portland Cement Manufacturers: "The History of Cement."

Meeting of the American Paper & Pulp Association. (Technical section.)

FRIDAY, *September 24.*

W. D. Coolidge, General Electric Co.: "The X Ray."

Philip Sharples, Barrett Manufacturing Co.: "The Development of Refined Tars for Use in Road Construction and Maintenance."

S. P. Sadtler, S. P. Sadtler & Sons.: "Some American Contributions to Industrial Chemistry."

L. H. Baekeland: "Chemical Industry."

Joint meetings of the New York Section of the American Chemical Society and the American Institute of Chemical Engineers.

SATURDAY, *September 25.*

Raymond F. Bacon, director of the Mellon Institute: "Research and Progress in American Manufacturing."

John Barrett, Director of the Pan-American Union: "The Great Pan-American Opportunity."

Thomas H. Norton, Department of Commerce: "Hydroelectric Possibilities of Niagara Falls."

E. E. Pratt, Chief of the Bureau of Foreign and Domestic Commerce: "Opportunities for American Chemical Industries." (Closing address.)

NEW METHOD OF MAKING SULPHURIC ACID.

A new method of manufacturing sulphuric acid, for which advantages are claimed, is suggested in United States Department of Agriculture Bulletin No. 283, "The Production of Sulphuric Acid and a Proposed New Method of Manufacture." The essential difference of the method is that the gases employed are drawn downward through a spiral flue in place of being drawn through lead chambers or intermediate towers. It is asserted that the resistance of gases to the downward pull and the constant change in their course through the spiral tend to mix them very intimately. The fact that the gases constantly impinge on the walls of the spiral flue, which can be cooled either by air or water, makes it practicable to maintain the gases at a temperature most favorable for the efficient yield of sulphuric acid.

In laboratory tests in which the spiral was utilized practically all the sulphur dioxide was oxidized to sulphuric acid, only traces being lost through escape or in the system. The lead spiral, the author points out, however, is not intended to replace the Glover tower, nor to do away with the Gay-Lussac tower.

It is believed that while the lead spiral will take considerable lead, the great reduction it will effect in the chamber space will make it possible to construct a plant with considerably less lead than is required in the ordinary chamber system.

The new type of plant requires no other device to accelerate the reactions, occupies much less ground space, and would not need as large buildings, and therefore should decrease the initial cost of construction. The method, however, has been tried only on a laboratory scale, and the bulletin refuses to predict just how efficient the commercial plant would be, but states that all indications are that this method offers promise of being economically successful.

DOG FOODS, REMEDIES, AND SOAP FOR WALES.

[Vice Consul in Charge William L. Jenkins, Swansea, Aug. 27.]

Swansea dealers in dog foods, dog remedies, and flea soap state that there is a good market in this district for such articles, but that American firms desiring to establish their lines should be prepared to advertise extensively both in the newspapers and through bill-posting agencies. The price of dog remedies has remained the same since the outbreak of war, but dog food has gone up about 20 to 25 per cent. A box of Spratt's dog food, which before the war sold for 2½d. (\$0.05), now retails at 3d. (\$0.06).

Flea soap is practically unknown on this market, although a flea powder is in use. This soap would be sold by chemists. Dog foods and poultry meat are sold by local grocers. A list of both these classes of dealers is forwarded [and may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file 65,976].

It is believed that the trade for this district can be profitably handled through agents from large users in London or Liverpool, though some business will doubtless result from direct correspondence.

These goods now on sale are entirely of British manufacture. The name of a local firm particularly interested in receiving quotations on dog remedies is sent herewith.

SALES OF PERFUMERY IN SPAIN.

[Consul Wilbur T. Gracey, Seville.]

An investigation of the market in Seville for perfumery, toilet waters, and like preparations shows that there is an opportunity for the sale of American goods if the manufacturers can meet the conditions of sale as generally given.

Perfumery is largely used by the Spanish people, probably to a much larger extent than in the United States in proportion to the population, as its use is by no means confined to ladies. Spanish men use perfumes almost as much as do the women, and there is, therefore, an extensive market.

Origin of Toilet Articles in Demand.

The French perfumes, of all the well-known makes, are universally popular here. They are imported direct, and owing to the high duties are sold at prices very much in excess of those asked in France. They appeal to the local populace not only because of their superior quality, but also because of the attractive manner in which they are bottled and packed. Odd-shaped bottles, with corresponding silk-lined boxes, and packages containing several different shapes of bottles, or varied scents, are found; but in this line, possibly more than in any other, the French seem to excel.

The well-known French names, the constant quality of the goods, and the fact that much of the descriptive matter relating to the goods is printed in the Spanish language are some of the reasons for the popularity of French perfumes.

Perfumes are manufactured locally and are said to be equal if not superior in quality to some of the French and other makes, but the mere fact that they are locally manufactured, and are therefore cheap, mitigates against their sale. Possibly in no other line is there so strong a feeling that the imported goods are superior to the local products as in perfumery and toilet preparations.

Only one American firm seems to have toilet preparations on sale here, and these consist principally of talcum powder, shaving soap, powder, and paste, and tooth paste. They are not received direct, and in consequence the prices are about double those charged in the United States.

Some English soaps are sold, but the local products or those made in France seem to have the largest sale. A floating bath soap is unknown here, and there would appear to be an opportunity for the sale of such soaps for bathing purposes. Sand soaps can not be obtained and should command a large sale, as they are particularly useful in cleaning marble, tiles, etc., of which there are large quantities used in building operations in this city.

Quotations, Credits, Sales Methods.

The price of American goods should, if possible, be given in francs, which are equivalent to the local gold peseta (1 franc=1 gold peseta=19.3 cents). By making quotations in Spanish gold currency instant comparison can be made with the prices quoted by French and other European firms. If quotations can be made c. i. f. Seville, it will be advantageous to do so.

As a general rule the terms granted for this class of goods are 30 days from date of shipment, with 2 per cent discount for cash.

Perfumes are sold here in the bazaars, drug stores, gentlemen's furnishing stores, dry goods shops, by glove dealers, etc. It is probable that by sending lines of samples to concerns in Seville new classes of perfumes could be introduced, but some arrangements would have to be made to assist the company or firms interested in advertising the goods. Advertising here is done by posters, billboards, advertisement on moving-picture screens, notices in the daily, weekly, and monthly publications, and by theater curtains.

Most of the perfumes and toilet articles are introduced by the traveling agents of the firms in France, England, and other European countries, who call several times during the year, bringing a line of samples and selling direct or through some of the larger wholesale houses of Barcelona or Madrid.

All correspondence should be in the Spanish language, as should catalogues and other literature, as very few of the importers are familiar with English.

One American firm which has its agency in Barcelona is doing an excellent business in Spain. A stock is carried in this country and prices quoted c. i. f. in pesetas, with immediate delivery. Other American firms following this plan will probably meet with equal success. There is no prejudice against American goods, but Spanish merchants expect to receive credits and will seldom purchase on a cash basis. The Spaniard looks upon a demand for cash in advance or against documents as a reflection on his honesty, and even though the goods and prices may be satisfactory he will decline to purchase because of this lack of confidence.

In the case of toilet preparations, merit almost invariably counts for more than prices or terms in considering purchases. Cheap grades of goods are obtainable from local manufacturers, and if goods are imported they must be equal in quality to those imported from other foreign countries with which they must compete. The French goods have heretofore had the advantage of easy access to the markets, cheaper and better transportation facilities and insurance rates, and better banking and credit facilities.

Shipping and Packing.

There is no direct parcel-post system with Spain, but packages are now exchanged between Great Britain and Spain, and by sending them from the United States to Great Britain and having them re-addressed and reshipped to Spain it is possible to get small packages here by post much more cheaply and expeditiously than by any other means.

Toilet preparations for this market are usually carefully packed in sawdust or with corrugated strawboard, the cost of packing usually being separate from the price of the goods. Tight boxes are of course necessary and iron strapping is recommended.

The best route for direct shipments to Seville is via steamers of the Compania Transatlantica from New York to Cadiz. The Gans Line also has direct steamship service to this city, but the steamers usually make other Spanish ports before touching here. The Transatlantica boats leave monthly from New York and Spain. Through rates via

the Transatlantica to Seville, via Cadiz, can be obtained, including all charges for transshipment.

Payments, Local Sales, Etc.

Payments for goods are usually made by drafts through London or Paris, or when the business has been established on letters of credit or through banking agents in New York.

Several of the local firms have branches in the smaller towns of this district and send their traveling men to these towns at frequent intervals.

It is possible that arrangements can be made for a local agent through samples, etc., but it is more probable that success will be attained by the visit of a commercial traveler.

A traveler in other lines, who recently called at this consulate, informed me that in his opinion Spain was the best country in Europe in which to sell at the present time. He had taken over 250 orders in eight weeks in a country where he had expected to do practically nothing.

FOREIGN TRADE IN COPPER.

The following table shows American imports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, Washington, and Michigan during the week ended September 11:

Countries.	Ore, matte, and regulus (copper contents).		Pigs, ingots, bars, plates, old, etc.	
	Pounds.	Value.	Pounds.	Value.
Canada.....	98,453	\$12,528	175,500	\$30,713
Panama.....			95	29
Cuba.....	1,008,000	58,105		
Peru.....	154,121	7,030	2,121,110	239,049
Total.....	1,260,574	77,663	2,296,705	269,791

The exports were:

Countries.	Pigs, ingots, bars, plates, and old, etc.		Countries.	Pigs, ingots, bars, plates, and old, etc.	
	Pounds.	Value.		Pounds.	Value.
France.....	55,494	\$9,936	French West Indies.....	581	\$146
Netherlands.....	74,925	15,401	Argentina.....	10,902	3,771
England.....	314,635	59,813	Brazil.....	2,152	443
Canada.....	52,224	11,246	Philippine Islands.....	17,164	3,557
Cuba.....	2,661	681	Total.....	533,907	105,741
Haiti.....	820	200			
Dutch West Indies.....	2,349	547			

NEW GOVERNMENT CHEMICAL LABORATORY.

Secretary Redfield recently approved the award of the contract for the construction of a chemical laboratory building for the Bureau of Standards, Department of Commerce, to Wells Bros. Co., of New York, whose bid was \$188,556. The contract has now been signed, the contractors have filed the necessary bond, and the construction work is to be commenced immediately. Donn & Deming, of Washington, D. C., are the architects.

STATISTICS OF AMERICAN FOREIGN TRADE.

The following table shows the imports, duties collected, and exports for the week ended September 18, 1915, at the 13 principal customs districts of the United States:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah)	\$1,766	\$26	\$77,200
Massachusetts (Boston)	3,284,000	121,731	738,888
New York	17,766,168	2,261,167	41,562,278
Philadelphia	1,272,057	244,719	2,237,402
Maryland (Baltimore)	271,381	14,041	1,232,913
Virginia (Norfolk)	97,873	3,900	2,327,279
New Orleans	1,024,549	96,740	2,867,546
Galveston	113,304	2,400	2,506,457
San Francisco	2,537,888	107,234	3,076,858
Washington (Seattle)	2,021,372	29,748	1,320,686
Buffalo	469,401	27,464	1,655,753
Chicago	450,814	105,323	804,144
Michigan (Detroit)	514,916	34,595	2,992,479
Total	29,826,149	3,040,368	65,249,883

The above figures show a favorable balance of \$35,423,734 on merchandise transactions for the week ended September 18 in the thirteen customs districts. The thirteen districts cited handled about 92 per cent of the import and export business of the country, based on the transactions in June, 1915.

Cotton exported during the week ended September 18 amounted to 91,089 bales, making the total since August 1, 1915, approximately 307,498 bales.

GOVERNMENT LOANS TO CHILEAN NITRATE PRODUCERS.

[Consul General L. J. Keena, Valparaiso, Aug. 10; all sums expressed in United States gold.]

The commission in charge of the Government loans to nitrate producers in Chile, organized under Government decrees of August 13 and 18, 1914, has reported to the Minister of Finance that the operation of the law providing for such Government loans reached its maximum activity between August and December of 1914. Since that time the tendency has been toward a balancing of these obligations on the part of the nitrate producers as a result of the increasing sale of nitrate.

Up to July 31, 1915, the loans totaled \$863,464, the liquidations, \$722,949, and the interest collected, \$89,351. The net expenses to the Government in the operation of these loans from August, 1914, to July 31, 1915—which expenses include the salaries of a cashier and secretary for this department—were \$3,287.

TANNING EXTRACTS FOR RUSSIA.

[Consul F. Willoughby Smith, Batum, Aug. 12.]

According to the "Kavkaz" a group of Russian leather manufacturers are establishing in the West Caucasus a large plant for the production of oak and chestnut bark extract. It is stated that the capital, \$7,500,000, has been fully subscribed. Heretofore Russian manufacturers have been dependent on the imports of tanning extracts from the United States.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Construction work, No. 2636.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until October 14, 1915, for the construction, complete (including mechanical equipment and approaches), of the United States post office and courthouse at Wilkesboro, N. C. Drawings and specifications may be obtained from the custodian of site at Wilkesboro or at the Washington office.

Canals and structures, No. 2637.—Sealed proposals will be received at the office of the United States Reclamation Service at Powell, Wyo., until October 20, 1915, for the construction of canals and structures on the Shoshone project, Wyoming, involving 560,000 cubic yards of excavation, 1,400 cubic yards of reinforced concrete, 9,000 square yards of grouted paving, and the placing in wooden structures of about 130,000 feet b. m. of lumber. The work is located near the stations of Garland, Mantua, Frannie, and Deaver, Wyo., on the Chicago, Burlington & Quincy Railway. For further particulars address the United States Reclamation Service, Washington, D. C., Denver Colo., or Powell, Wyo.

Firing magnetos, No. 2638.—Sealed proposals will be received at the office of the Chief of Ordnance, United States Army, Washington, D. C., until October 4, 1915, for furnishing and delivering f. o. b. contractor's works 103 firing magnetos, type MA, in accordance with drawings 14-5-72 to 76, inclusive, dated September 8, 1915. Further information and particulars may be obtained from the above office.

Construction work, No. 2639.—Sealed proposals will be opened in the Supervising Architect's office, Treasury Department, Washington, D. C., on October 15, 1915, for the extension, remodeling, etc., of the United States post office at Moberly, Mo. Drawings and specifications may be obtained from the custodian of site at Moberly or at the above office.

Construction work, No. 2640.—Sealed proposals will be received at the office of the United States Reclamation Service at St. Ignatius, Mont., until October 12, 1915, for the construction of about 10 miles of laterals and appurtenant structures, involving about 43,000 cubic yards of excavation, 140 cubic yards of concrete, 430 square yards of paving, the placing of about 9,840 pounds of reinforcing steel, and the placing in wooden structures of about 32,000 feet B. M. of lumber. The work is situated on the east bank of the Flathead River from 1 to 7 miles northeast of Dixon, Mont. For particulars address United States Reclamation Service, Washington, D. C., Denver, Colo., or St. Ignatius, Mont.

Telephones and electric fixtures, etc., No. 2641.—Sealed proposals, indorsed "Proposals for Telephones, Electric Fixtures, and Wiring," will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until October 2, 1915, for furnishing and installing four telephones, electric fixtures, and wiring at the naval station, New London, Conn. Plans and specifications may be obtained on application to the Bureau of Yards and Docks.

Repair work, No. 2642.—Sealed proposals will be received at the office of the Lighthouse Inspector, Portland, Me., for docking and repairing lighthouse tender *Hibiscus* in accordance with specifications. Blank proposals and particulars may be obtained by addressing the above office.

Unserviceable public property, No. 2643.—There will be sold at the General Lighthouse Depot, Tompkinsville, N. Y., part by sealed bids and part by public auction, a quantity of unserviceable public property consisting of row and sail boats, rope and canvas junk, bed springs, furniture, water meter, doors and shutters, windows, marine clocks, machinery, air compressor, batteries, electric lamps, electric wire, etc. Blank proposals and particulars may be obtained by addressing Lighthouse Inspector, Tompkinsville, N. Y.

Air-compressor units, No. 2644.—Sealed proposals will be received at the office of the Lighthouse Inspector, Buffalo, N. Y., for furnishing four air-compressor units for fog signals at Cleveland and Ashtabula, Ohio. Further information may be had by addressing Lighthouse Inspector, Buffalo, N. Y.

Construction work, No. 2645.—Sealed proposals will be received at the Office of the Supervising Architect, Treasury Department, Washington, D. C., until October 23, 1915, for the extension, remodeling, etc., of the United States post office at Kirksville, Mo. Drawings and specifications may be obtained from the custodian at Kirksville or from the Treasury Department.

A NEW OIL NUT FROM CENTRAL AMERICA.

[Special Agent Garrard Harris.]

Attention has recently been directed to the promising new source of commercial oil which exists in the nuts of the coyol palm of Central and tropical South America. This tree grows very abundantly in Costa Rica, Nicaragua, and upper Panama, especially on the Pacific side. It is a product rather of the savannahs than of the mountains, and in the regions which it favors there are forests extending for miles. It is stated that the nuts can be gathered in great quantities and very cheaply. At present cattle eat them where they fall, and the natives also eat the kernel and chew the gummy inner casing of the husk.

Specimens of the nuts have been submitted to the Bureau of Plant Industry of the Department of Agriculture for examination and analysis, and they report as follows:

After having been botanically identified as *Acrocomia vinifera* Oerst., these nuts or kernels were submitted for oil content analysis to the food investigation chemist, who reports that they contain 57.7 per cent of petroleum ether extract. An analysis of the seeds of the same palm from Nicaragua was published in 1903 as follows: "Specific gravity at 25°, 0.9136; melting point, 25°; clouding point 17°; free acid, 1.69; saponification number, 246.2; iodine number, 25.2; Reichert Meissel number, 5." Both the oil and residue are similar in composition to that obtained from the coconut and other palms, and could be used in the manufacture of similar food products. The difficulty of producing this oil in commercial quantities, however, is a mechanical one, there being no machinery on the market at this time that can be economically used for cracking the extremely hard shells that inclose these kernels. An allied genus (*Attalea cohune*), the palm from which the cohune oil is obtained, grows in great abundance in British Honduras, but on account of the lack of proper mechanical means to crack the nuts it can not be profitably produced. Experiments with machinery for this have been carried on from time to time for some years at Belize, but we have not heard of the success of any of the ventures. We understand also that a concern in Philadelphia is testing machines for this purpose. The cohune nut, though somewhat larger than the coyol, is similar in construction, and the same machine could doubtless be used for both.

It is suggested that the cake, after the oil had been extracted, might be of value for fertilizing or for cattle feeding, but nothing definite is known on this point. There is a gentleman in San José, Costa Rica, who is interested in the matter of the utilization of these nuts and who would be glad to undertake the building of a factory, in case the project should be taken up by American capital.

[The names and addresses of the gentleman referred to in the last paragraph and of the Philadelphia firm which is experimenting with the machinery have been received by the Bureau of Foreign and Domestic Commerce and will be furnished to inquirers. Refer to file No. 649.]

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Advertising novelties, No. 18370.—A firm in Switzerland informs an American consular officer that it is desirous of making connections with American manufacturers of fancy articles for advertising purposes, such as articles for the pocket, mirrors, pictures, calendars, and novelties for hanging on the walls in tea rooms, hotels, restaurants, and waiting rooms. Samples and quotations are desired. Prices c. i. f. European port or f. o. b. American port. American export terms and conditions are accepted. References given. Correspondence may be in English.

Dried and canned fruit, No. 18371.—An American consular officer in the Netherlands reports that a man in his district desires to represent American manufacturers and exporters of dried and canned fruits. Terms, commission basis or own account. References given. Correspondence may be in English.

Chemicals, etc., No. 18372.—A manufacturer in the Far East requests an American consul to furnish names of American firms dealing in industrial vaseline, liquid ammonia, boracic acid in powder, naphthaline in powder, and tin sheets with which to line the interior of wooden cases. It is understood that the requirements are only for the plant of the inquirer, but there are other plants of the same kind, and there is a possibility that a market might be created for these American products.

Toilet articles, No. 18373.—A firm of commission agents has requested an American consul in Greece to place it in direct communication with American manufacturers of toilet soaps and other toilet articles. Quotations f. o. b. New York, cash against documents for first orders. The consul states that there is a good demand for all kinds of fine toilet and high-grade laundry soaps in that market.

Hosiery, No. 18374.—An American consular officer in Switzerland reports that a firm in his district desires to establish commercial relations with American manufacturers of silk, lisle, cotton, and woolen hosiery. Samples, prices, terms of payment, and catalogues are requested. Bank references given. Correspondence should be either in German or French.

Electric ceiling fans, No. 18375.—A report from a consular officer in India states that a firm desires to be placed in communication with American manufacturers of electric ceiling fans. It is stated that there is a very large market for this type of fan. Illustrated advertising matter, prices, discounts, and terms of sale are desired. It would like exclusive representation on a commission basis, but if necessary will buy outright. Prices should be quoted c. i. f. Calcutta. References can be furnished. Correspondence may be in English.

Slaughterhouse, No. 18376.—An American consular officer in Peru reports that a municipality in that country intends to build a large slaughterhouse and cattle market, and it is requested that American firms interested in supplying the material for offices, refrigerating plant, warehouses, stables, kennels, restaurant, and stalls for this enterprise obtain the name of the person in charge of the operation from this Bureau or its branch offices. Correspondence should be in Spanish, and the metric system used in stating weights and measurements.

Paints, colors, and varnishes, No. 18377.—A firm in India requests an American consul to place it in communication with American manufacturers of paints, colors, and varnishes. Correspondence may be in English.

Toothpicks, etc., No. 18378.—It is stated in a report from an American consul in Switzerland that a firm in that country is desirous of communicating with American manufacturers of wooden toothpicks, cigar and cigarette holders, ash trays, and small fancy novelties, such as are used in hotels, restaurants, and bars. Samples and quotations f. o. b. American port or c. i. f. European port are solicited. American export terms and conditions are accepted. Correspondence may be in English. References are given.

WOOLEN MILLS CLOSING IN SWEDEN.

[Chargé d'Affaires Jefferson Caffery, Stockholm, Aug. 24.]

The newspapers announce that on account of the lack of raw material various factories in Sweden making woollen fabrics have been obliged to close down.

SHORTAGE OF CROCHET AND KNITTING COTTON.

[Commercial Attaché Verne L. Havens, Santiago, Chile, Aug. 24.]

There is a shortage of crochet and knitting cotton in Chile. D M C goods of European origin have been entirely consumed. Six stores visited had no crochet cotton left. The small available supply is increasing rapidly in price.

It is suggested that manufacturers of these goods communicate with people with whom they have had previous relations in the hope that shipments can be made soon without much delay in looking up credit standing.

AMERICAN CATALOGUES WANTED IN BRAZIL.

[Consul Maddin Summers, São Paulo, July 29.]

With reference to my cablegram requesting catalogues of American exporters [see COMMERCE REPORTS for July 19, 1915] the importance of manufacturers sending catalogues, price lists, etc., to this consulate at as early a moment as possible is reiterated.

The new American consulate has now been established in São Paulo for over two months, and there are practically no catalogues in the files. The São Paulo merchants are daily asking for commercial information, and we are at a loss to assist them as we should. Commercial literature should be sent promptly to the "American Consul, São Paulo, Brazil."

CHANGES IN ARGENTINA'S FOREIGN TRADE.

[Consul General W. Henry Robertson, Buenos Aires, Argentina, Aug. 13; monetary sums given are in United States currency.]

The Director General of Statistics has given advance information regarding Argentine exports and imports for the first six months of 1915.

The balance of trade in favor of the Republic during this period amounts to \$203,405,072, the highest mark that has ever been reached.

Value of Total Foreign Commerce.

The value of the total Argentine foreign commerce in the first half of 1915 was \$396,651,938. The amount exceeded that for the corresponding period in 1914 by \$25,367,592. Imports into the country for the first half of 1915 decreased by \$68,407,648, or 41.4 per cent, from those for the six-months period in 1914, while the exports increased by \$93,775,240, or 45.4 per cent, over those of the first half of 1914.

The revenue of the country has been seriously affected by the fact that the value of the dutiable imports for the first half of 1915 has been \$46,803,767, or 43.8 per cent, less than for the corresponding period of 1914.

Among the imports of 1915, as compared with those of 1914, only two classes of articles show an increase—live stock and oils of all kinds (mineral, volatile, medicinal, and fats). In the case of the latter, this is due to the increased import here of naphtha and crude petroleum.

Increase in Agricultural and Forest Products Exported.

The exports show increases only in agricultural and forest products, while the others have fallen off. Those of live animals increased over 1914 by \$1,069,956, due chiefly to the shipment of horses, which represented a value of \$2,591,035. The exports of frozen meats decreased by \$1,903,855; chilled beef, by \$2,438,357; frozen sheep and lambs, by \$1,031,386; and the value of the wool exported was less than in 1914 by \$1,031,386.

The agricultural products exported increased in value by \$95,404,040, and included an increase of \$7,742,548 in oats; of \$4,873,551 in maize; of \$85,296,848 in wheat; of \$3,225,084 in flour; and of \$3,748,306 in sugar.

COAST-TO-COAST SERVICE OF CANADIAN RAILWAY.

[Consul Henry P. Starrett, Fort William, Ontario, Sept. 1.]

On August 24 an official inspection of the new line of the Canadian Northern Railway between Sudbury and Port Arthur, Ontario, was made by the president of the road, Sir William McKenzie. The running time of the train between Toronto and Port Arthur was 20 hours, a saving of about 8 hours over the competing line.

While no definite announcement has been made as to the date of the establishment of permanent service over the new line, the officials of the company promise that this will take place during the early part of the present month, in ample time to assist in the great fall and winter movement of east-bound grain.

The completion of this section of the railway now gives the Canadian Northern System a through transcontinental line from New Westminster, B. C., to Ottawa and Montreal.

U. S. SHIPS GET CANADIAN LAKE-TRAFFIC RIGHTS.

[Consul Henry P. Starrett, Fort William, Ontario, Sept. 9.]

Reports reached here to-day from Ottawa that the Dominion Government had decided to permit American ships to trade between Canadian lake ports.

The pressure brought about by the lack of sufficient Canadian vessel tonnage to handle the grain crop through the Great Lakes is said to be responsible for this move.

During the navigation season of 1914 there were 105 vessels of Canadian register employed in the grain-carrying trade on the Great Lakes, their total tonnage being 350,000. Owing to the transfer of many of these ships to the ocean trade, there are available this season only 56 Canadian ships, with combined tonnage of 109,000.

It is stated that this partial suspension of the Canadian navigation laws is to be operative only during the present navigation season. The effect of the innovation will be that American lake vessels will participate this season to a much larger extent than ever before in the grain-carrying trade out of Fort William and Port Arthur.

United States Commissioner of Navigation E. T. Chamberlain states that this report will be welcome news to the owners of American ships engaged in the lake traffic. "They have had a bad year," says Mr. Chamberlain, "and this action on the part of the Canadian Government will help to improve conditions. The navigation season will continue through the rest of September, the month of October, and through as much of November as weather conditions will permit."

TOURIST VESSEL WANTED.

[Consul William F. Doty, Nassau, N. P., Bahamas, Sept. 17.]

A vessel is being sought by a tourist agency in the United States to accommodate 25 to 30 first-class passengers for a cruise of two weeks, starting preferably from Jacksonville, Fla., but if necessary from Miami or some other port of that State, touching at Nassau, New Providence, Wilson City, Abaco, Governors Harbor, Harbor Island, Watlings Island (discovered by Columbus), and possibly at one or more intermediate islands, and thence to a Florida port.

The steamer should not draw more than 13 feet. All expenses, including food of passengers while not on shore, fuel, and incidentals, are to be estimated in the bid and only one amount to be submitted to the agency. Probably during the cruise the vessel may be in harbor nearly one-half of the time, but it might prove somewhat less. A yacht naturally would be preferred. The voyage is planned between January 1 and March 31, 1916.

[The address of the firm to which communications should be addressed may be had from the Bureau of Foreign and Domestic Commerce or its branches; refer to file 60,307.]

PEAT POWDER FACTORY IN SWEDEN.

[Chargé d'Affaires Jefferson Caffery, Stockholm, Aug. 24.]

Arrangements are being made for the erection of a large factory in Sweden where peat powder will be prepared. It will be located in the Province of Vastergotland, where there are many large peat bogs.

CURRENCY SITUATION IN BERMUDA.

[Consul Carl R. Loop, Hamilton, Bermuda, Aug. 20.]

In normal times the volume of currency in Bermuda is estimated at £50,000 (British £=\$4.8665) in gold and at £10,000 to £12,000 in silver, there being no paper currency. Immediately upon the outbreak of the war the exportation of gold was prohibited, although large amounts of specie were taken out of the colony by British war vessels, reducing the volume to about £20,000 in gold and about £3,000 in silver.

In October last between £30,000 and £40,000 in gold was imported from England, since which date no specie has been shipped, due to the possibility of its nonarrival. This new supply continued to be depleted in a manner similar to that which reduced the original amounts, so that in March of this year, under act of the colonial legislature, the Bermuda Government issued £8,000 in £1 notes, for general circulation, and about June 1, a further issue was made of £10,000 in £1 notes, which were handed to the treasury chest officer for payment to the military and naval services, the colony receiving in turn a credit for like amount in London.

About July 1 a further expedient was resorted to, viz, that of importing about £10,000 worth of American currency for military and naval requirements.

In July the governor of Bermuda received a communication from the treasury of the United Kingdom, suggesting, in view of the shortage of currency in Bermuda, that the emergency be met by one of the following measures:

(1) By passing legislation enabling the continuance of the issue of Bermuda Government notes to the treasury chest officer, or

(2) By enacting that United Kingdom currency notes of £1 and 10 shillings denomination shall be legal tender in Bermuda.

Pursuant to the suggestion, the Bermuda Legislative Assembly enacted on August 3 that £1 and 10 shilling notes of the United Kingdom shall be legal tender in Bermuda, such notes to be supplied as and when required by the colony. The act by its own terms will expire at the end of 1917, but in practice it will be continued by appropriate legislation until its usefulness has ceased to exist. At the same time an act was passed authorizing the issue of Bermuda Government £1 notes to such amount, not exceeding £30,000, inclusive of the £18,000 already issued, as the governor shall from time to time direct.

Rates of Exchange.

In normal times Bermuda banks receive American currency at 1 per cent discount, sell exchange on New York at par, and buy similar exchange at 1 per cent discount. Now American currency is accepted by the banks at par. Exchange on New York is sold at 1 per cent premium and is purchased at par.

Nearly two and a half million workpeople in the United Kingdom have had since August, 1914, increases in wages totaling \$2,000,000 per week. The British Board of Trade Labor Gazette adds that these figures do not include increases for overtime, nor to farm laborers, seamen, railway men, police, or Government employees.

AMERICAN FOREIGN TRADE DURING AUGUST.

For the first time in the Nation's history exports of the United States exceeded \$3,000,000,000 in value for a 12-month period. For the 12 months ending with August 31, 1915, exports aggregated \$3,035,033,280, against \$2,280,185,791 in a like period one year ago. Twelve months' imports of merchandise totaled \$1,669,698,934, compared with \$1,906,657,515 last year.

The month of August showed exports valued at \$261,975,771, against \$110,367,494 in August, 1914, an increase of \$151,608,277, or 137 per cent. August imports totaled \$141,729,638, against \$129,767,890 in August, 1914, a gain of \$11,961,748, or 9 per cent. Thus August trade this year shows an export balance of \$120,246,133, as compared with an import balance in August, 1914, of \$19,400,396, a favorable change of \$139,646,529.

Of the August imports, 70 per cent entered free of duty, against 62 per cent in August last year.

Our international gold movements during the first year since the outbreak of the European war included imports of gold, \$244,004,045, against \$59,312,328 in a like period one year ago; exports of gold, \$97,749,270, against \$153,984,944 a year earlier.

The 12 months ending with August 31, 1915, showed an excess of exports over imports of merchandise amounting to \$1,365,334,346, compared with \$373,528,276 in a like period one year ago, and \$711,755,672 in a like period two years ago. It also recorded a net inward gold movement of \$146,254,775, compared with a net outward gold movement of \$94,672,616 in 1913-14, and a net outward movement of \$4,315,591 in 1912-13.

The aggregate foreign commerce of the United States in the year ending with August, 1915, the first year of the European war, was, including merchandise, gold, and silver, \$5,129,715,002, against \$4,480,304,760 in the year immediately preceding the war. The net increase of \$649,410,242 for the year included a gain of \$754,847,489 in exports of merchandise and of \$189,749,922 in imports of gold and silver, and a decrease of \$236,958,581 in imports of merchandise and of \$58,228,588 in exports of gold and silver.

HANDBOOK ON MINING LAWS.

"United States Mining Statutes Annotated" is a 1,772-page bulletin (No. 94) just issued by the United States Bureau of Mines. Owing to the expense involved in its printing it has been necessary to place the nominal price of \$2.50 on the work. It is for sale in two cloth-bound volumes at this price by the Superintendent of Documents, Washington, D. C.

The bulletin is intended for persons engaged in mining enterprises that come within the scope of the Federal mining laws and as a guide in the determination of mining rights and duties. It shows the status of every Federal mining law, both laws relating to metal mining and those relating to coal, oil, and phosphate, and to mining on public, Indian, and railroad lands. It includes references to Alaska and the Philippine Islands, and is the only complete work in its field.

SOUTH AMERICA BUYS LITTLE FOREIGN CANDY.

[Consul General L. J. Keena, Valparaiso, Chile, Aug. 9.]

The Chilean customs law classifies imported candies as "chocolate in bars and powdered chocolate," "manufactured chocolate," and "manufactured candies." On the chocolate products the duty is 40 per cent and on the manufactured candies 65 per cent on a set valuation of 1.20 pesos per kilo (19.87 cents per pound).

The bar chocolate and powdered chocolate imported into Chile include all standard makes of British, French, Swiss, and Italian products. The bar chocolate is put up in tablets of various sizes wrapped in tinfoil and with an outer wrapping of paper. Manufactured chocolate is ordinarily solid chocolate candies molded into varying shapes and wrapped with an inner covering of waxed paper and an outer covering of tinfoil. All the chocolate candies imported from Italy are of this type, and, in addition, the products of two Turin companies often contain inside the wrapper a slip of paper bearing a motto or wish in Spanish.

Retail Prices—Mixed and Bulk Candies.

The local retail price of solid chocolate candies wrapped as above averages about \$0.90 United States currency per pound. Finer grades, with cream or nut centers, such as are used in box trade, retail for about \$1.30 United States currency per pound; the sale of these, however, is very limited. The Italian, Swiss, and French chocolates are often sold in small tin boxes of odd shapes, such as fruits, musical instruments, trunks, motor cars, etc.

In candies other than chocolate there is some sale for mixed bonbons packed in fancy boxes. This line will probably never be of much importance, as the candy when retailed is four to six months old. Some varieties of English candies, particularly toffee and barley sugar, are sold in $\frac{1}{2}$ -pound, 1-pound, and 2-pound tins, the candies contained in the tin being individually wrapped in waxed paper.

The largest general sale for bulk candy is in caramels, individually wrapped in waxed paper, and in a kind of hard cream candy with a fruit-pulp center. The latter are wrapped in waxed paper and covered with an outer wrapper bearing the name of the flavor and the name of the manufacturer. The trade in this line seems to be divided between a London and a Turin firm. The product of the first-named company retails for about \$1 United States currency per pound and the Turin company's caramels, etc., for about \$0.75 per pound.

Correct Packing an Essential.

The requirement of the local market for imported chocolates and candies is that they be of a type which will not deteriorate rapidly and that they be so wrapped that they will not take up moisture from the air. The requirement as to wrapping does not apply to fruit lozenges, which are ordinarily kept in glass jars. For shipment through the Tropics candy of all kinds should be packed in air-tight containers.

Candy and chocolates are imported principally by wholesale grocers. A list of these houses in Valparaiso and Santiago, Chile, is

transmitted [and may be had, upon application, from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65581].

Chile's Purchases of Foreign Confections.

The amount and value of Chile's imports of candy and the principal countries from which the confections were purchased during the last two years are shown below:

Articles and sources.	1913		1914

Italy	46,396	9,218	65,543	13,022
Spain	9,645	1,916	5,478	1,088

[Consul General Alfred L. Moreau Gottschalk, Rio de Janeiro, Brazil, July 29.]

Brazil Imports but Small Part of Total Amount Consumed.

The following statistics show the extent to which the various classes of sweets were imported into Brazil during 1913 and 1914:

Articles and sources.	1913		1914	
	Pounds.	Value.	Pounds.	Value.
Chocolate.	102,438	\$39,687	36,747	\$16,079
United States	507	167		
France	13,852	4,289	4,879	1,483
Germany	6,314	2,676	2,341	1,027
Great Britain	32,234	11,043	7,921	4,119
Italy	10,657	5,380	4,403	2,326
Switzerland	30,510	12,911	13,541	5,442
Confectionery and candies.	217,911	57,731	102,758	23,923
United States	421	112	2,921	718
France	91,820	29,906	33,336	10,640
Great Britain	92,039	14,918	51,573	7,643
Italy	9,211	4,204	1,980	917
Switzerland	3,627	1,386	2,487	1,028

It is apparent from the foregoing figures that the importations of these products constitute but a small share of the consumption of a nation of nearly 20,000,000 inhabitants who are proverbially fond of sweets.

Domestic Industry Supplies Most of the Demand.

The comparatively small import is attributable, first, to the extremely high protective tariff under which a growing domestic in-

dustry has been fostered, and, second, to the rapid deterioration of confectionery in this climate. Chocolate, cocoa, and candies are made in numerous large factories in Rio de Janeiro, the operations of which were described in a report from this consulate general dated April 23, 1913, entitled "Chocolate, Cocoa, Candies, and Confectionery in Brazil." [The report referred to is one of an extensive series on this subject, prepared by American consular officers in many countries. The reports, in manuscript form, are available for inspection at the Bureau of Foreign and Domestic Commerce or its branch offices.] Unfortunately more recent statistics concerning domestic production are not available.

Van Houten's (Dutch) and Suchard's (French) are the most popular foreign cocoas used here; and Cadbury's (English) and Jacquin's (French), together with some Italian candies, in boxes and hermetically sealed tins, enjoy the bulk of the Brazilian trade in imported candies.

[A list of Rio de Janeiro importers of confectionery may be obtained from the Bureau and its branches by asking for file No. 65424.]

AMERICAN OIL-DRILLING MACHINERY IN THE CAUCASUS.

[Consul F. Willoughby Smith, Batum, Russia, Aug. 12.]

The following extract from a letter addressed to this consulate by an important Baku firm may be of interest to American manufacturers of drilling machinery.

The most conspicuous feature in the local district from the United States point of view is the boom in rotary drilling machinery. Quite a number of outfits have been imported from the States. It would pay any manufacturer of rotary outfits to open stores in Baku and Grozny.

Generally, it must be pointed out that America being the home of the petroleum industry should have no difficulty in holding the lion's share of the Baku and Grozny markets, but in order to do this they must show some of the Teuton adaptability to circumstances, or in other words they must realize the need of credit in Russia; so far the United States manufacturer seems to expect the Russian merchant to find out what he (the manufacturer) has to sell, apply to him for particulars and prices, and send in orders accompanied by a confirmed credit, which in other words means depositing the money in full in a New York bank. The Russian merchant must then wait a few months for the execution of his order and a further few months for delivery. The net result is that the Russian merchant must be prepared to wait about a year before the goods come into his store, whereas the German manufacturer sends goods in bond, and the merchant pays for them as sold and taken out of bond.

The importance of keeping a permanent stock of drilling outfits at Baku and Grozny can not be too strongly emphasized.

APPLE SHORTAGE IN ONTARIO PROVINCE.

[Consul Felix S. S. Johnson, Kingston, Canada, Sept. 18.]

The apple crop in Ontario Province will be short and rather poor in quality. There has been much wet weather and fungus growths. Fruit men believe that this will be a low-record year in production and quality. Estimates for various sections are 20 to 50 per cent. In Prince Edward County Russets and Snows are well loaded; where sprayed the fruit is clean, and buyers have been active, some sales having been made at \$2.50 to \$2.70 per barrel.

FERTILIZERS IN HOLLAND.

[Commercial Attaché Erwin W. Thompson, The Hague, Aug. 24.]

By a recent regulation the Netherlands Government will in future purchase and import all foreign fertilizers through a special royal commission. Official blanks are now being filled out by the dealers indicating their probable requirements of the different kinds. A member of the commission is stationed in London to arrange details of financing and shipping. (The Dutch legation in London will give particulars to prospective sellers.)

Intensive agriculture has reached a high pitch in Holland, where there are about 500 people to the square mile. Besides the domestic barnyard manures, 24,000 tons are annually imported, mainly from Belgium and Germany. Artificial fertilizers are used to a large extent. In 1913, which was a normal year, 1,368,327 metric tons were imported for consumption.

Netherlands Imports of Artificial Manures.

The following table (in metric tons of 2,204.6 pounds) is from the Dutch official statistics for 1913 and shows the countries from which the various fertilizer ingredients were imported, though not necessarily the countries of origin:

Fertilizers.	Belgium.	Germany.	Pacific Islands.	United Kingdom.	United States.	Other countries.	Total.
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Natural guanos.....	4,693	1,068	4,960	489	5,400	5,763	22,313
Bone meal.....	60	6,053		62	11	890	7,046
Chilean saltpeter.....	31,344	3,791				168,450	203,585
Kainite and carnallite.....	748	212,318					214,066
Superphosphates.....	94,807	4,543	6,800	102	102,308	61,818	270,378
Thomas meal.....	60,422	326,216	1,000	310	45,844	4,321	438,113
Ammonium sulphate.....	434	27,752		2,991			31,177
Potash.....	10	105,182		1			105,193
Other kinds.....	20,014	28,483	3,428	22	7,760	16,739	76,456
Total.....	212,532	716,406	16,128	4,047	161,263	257,961	1,368,327

Quantity Used per Acre.

The whole area of Holland is 12,600 square miles (about the size of Maryland), which is occupied approximately as follows:

	<i>Square miles.</i>
Flowers and bulbs.....	30
Nurseries.....	85
Market gardens.....	195
Area most highly fertilized.....	310
Grain, potatoes, and other field crops.....	3,400
Total area fertilized.....	3,710
Meadows.....	4,750
Parks and trees.....	1,000
Buildings, roads, canals, moors.....	3,140
Total.....	12,600

Considering the fertilized area of 3,710 square miles, or 2,374,400 acres, the commercial fertilizer used averages more than 1,270 pounds per acre, which is fully three or four times as much as the average—where employed at all—in the United States. When to this is added the considerable amount of home manures used, it is not difficult to understand the high agricultural productiveness of this little country.

FOREIGN COUNTRIES BUY AMERICAN LOCOMOTIVES.

Facts of more than passing interest as to the growing world popularity of American locomotives and a truly remarkable achievement in quick delivery were brought to light in a personal letter to Secretary of Commerce Redfield from an official of a large American locomotive works. The following extract therefrom is used by permission:

You will be interested to learn that we received an order last week for 25 large freight locomotives for the Madrid, Saragossa & Alicante Railway, of Spain; we also received an additional order for 15 passenger locomotives for Serbia. The 25 locomotives for Spain will be built to duplicate throughout the European engines in all details—to the metric system and of plate-frame construction. The locomotives for Serbia will have 19 by 24 inch cylinders and will weigh about 150,000 pounds in working order; they will be equipped with superheaters and electric headlights and will embody all latest American improvements in locomotive design. The 15 locomotives will be built and delivered in New York within 60 days from receipt of order.

Thirty-five engines have already been completed on a Russian order, and we expect to complete the full 100 locomotives by the first week in October. We have made an excellent record in the construction of these engines, as the first locomotive was tested under steam at our works in 45 working days from receipt of order. The locomotives are of an entirely new design, and we had to purchase every pound of material that went into their construction. The Russian commission seems well pleased with the result.

Past Year Marks Beginning of Sales to Europe.

It is only within the last fiscal year that the United States has sold railway locomotives to Europe to any extent. Save for 1 locomotive sent to Austria-Hungary in 1910 and another in 1911, and 3 sent to Spain in 1913, no exports of steam locomotives to the Continent are revealed by the official statistics of the United States for the half decade ending June 30, 1914. In the 12 months following that date, however—a period practically coincident with the first year of the present European war—31 American-made locomotives were shipped to France, 9 to Greece, 10 to Serbia, and 5 to European Russia. Twenty steam locomotives were exported to Asiatic Russia in the same period. The values represented by these and other important shipments during the fiscal year 1915, with figures for the preceding five years for comparison, are given below:

Exported to—	1910 *	1911 *	1912 *	1913 *	1914 *	1915 *
Austria-Hungary.....	\$2,948	\$8,430				\$218,474
France.....						136,000
Greece.....						30,850
Russia in Europe.....						150,000
Serbia.....				\$21,900		
Spain.....					\$502,253	111,063
Canada.....	247,979	245,618	\$472,046	1,182,993		422,587
Cuba.....	122,749	153,967	280,786	382,200	679,615	12,185
Brazil.....	1,043,395	1,199,601	1,251,824	2,310,853	637,528	42,393
Chile.....	45,079	51,890	56,891	202,753	190,944	31,650
Colombia.....	32,793	68,023	40,030	42,821	31,650	17,786
Ecuador.....	14,950	15,900			37,510	7,600
Peru.....		11,875	13,750	89,540	96,116	148,887
Venezuela.....			6,445		27,510	316,000
China.....	102,755	147,700	55,125	129,075	228,629	9,067
Russia in Asia.....					320,037	418,304
Australia.....	3,314	11,325	341,117		785,248	
All other countries.....	787,657	1,939,319	780,168	2,077,524		
Total.....	2,404,619	3,953,648	3,298,182	6,442,674	3,692,225	2,115,866

* Includes both electric and steam locomotives.

• Steam locomotives only.

Exported to—	1910	1911	1912	1913	1914	1915
RECAPITULATION.						
Europe.....	\$2,948	\$3,430	\$24,009	(e)
North America.....	918,708	1,324,572	\$966,929	1,826,469	\$1,485,688	(e)
South America.....	1,244,840	1,465,539	1,413,009	2,065,887	1,102,993	(e)
Asia.....	132,740	686,804	386,611	1,452,161	585,360	(e)
Oceania.....	16,598	41,803	353,738	473,268	352,037	(e)
Africa.....	88,785	417,700	177,875	166,078	(e)

* Not yet available. However, it might be stated that the figures given for European and South American countries cover all of the year's shipments to those continents.

The total number of American-made locomotives exported to all destinations in the fiscal year 1910 was 310; in 1911, 416; in 1912, 349; in 1913, 622; in 1914, 883; and in 1915, 228.

REDUCTION IN ARGENTINE CROP ESTIMATES.

[Consul General W. Henry Robertson, Buenos Aires, Aug. 8.]

The Bureau of Agricultural Statistics and Rural Economy of the Ministry of Agriculture has issued a new estimate of the production of wheat, flax, and oats for the season 1914-15, as follows (yield expressed in metric tons of 2,204.6 pounds):

Provinces and Territories.	Wheat.	Flax.	Oats.
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Buenos Aires.....	1,635,000	215,500	676,000
Santa Fe.....	510,000	400,000	35,000
Cordoba.....	1,460,000	380,000	25,000
Entre Rios.....	130,000	190,000	22,000
Pampa.....	715,000	14,700	50,000
San Luis.....	80,000	14,000	10,000
Others.....	55,000	1,300	12,000
Total.....	4,585,000	1,126,500	831,000

Compared with previous forecasts for this same year, the above estimate indicates a decrease in each case, due to heavy rains and inundations in various parts of the grain belt, which very seriously retarded thrashing operations as well. At the date of this estimate, considerable wheat still remained unthrashed.

CALIFORNIA LIMA BEANS FOR EXPORT.

California produced 2,775,000 sacks (80 pounds each) of dry edible beans last year. Over half the yield—1,500,000 sacks in 1914—consists of limas, which are in demand not only in the United States but for export. A Ventura report says bean associations there have recently received inquiries in regard to limas from Australia and Japan, two new consumers.

Lima-bean growers are forming cooperative sales organizations this season throughout California. Several in Ventura County have entered into an agreement to sell their 67,000 sacks (80 pounds each), while another Ventura organization has been formed to dispose of 50,000 bags. Some of the associations are building warehouses and cleaning plants, one at Garden Grove costing \$4,000.

UNION SCALE OF WAGES AND HOURS OF LABOR.

The union scales of wages and hours of labor for 93 of the principal trades in 41 of the leading cities of the United States prevailing in May, 1914, are published in Bulletin No. 171, just issued by the Bureau of Labor Statistics of the United States Department of Labor. The scales shown are those of the baking, brewing and beer bottling, building, freight handling, granite and stone, metal, millwork, printing, soft-drink, and teaming trades.

The average rate of wages per week for all cities, taken collectively, was higher on May 1, 1914, than on May 1, 1913, for 75 of the trades reported; in 17 trades there was no change, and in only 1 trade was it lower.

Considering some of the more important trades, the following increases in weekly rates of pay between May, 1913, and May, 1914, may be noted: Bakers, 2 per cent; beer bottlers, 3 per cent; bricklayers, 2 per cent; carpenters, 1 per cent; hod carriers, 1 per cent; inside wiremen, 3 per cent; lathers, 2 per cent; parquetry floor layers, 6 per cent; plumbers and gas fitters, 1 per cent; sheet-metal workers, 3 per cent; stonemasons, 3 per cent; stonecutters, 4 per cent; structural ironworkers, 2 per cent; freight handlers, 3 per cent; blacksmiths, 2 per cent; painters (hardwood finishers), 4 per cent; electrotypers (battery men and builders, 5 per cent; electrotypers (finishers and molders), 4 per cent; compositors (book and job), 2 per cent.

Considering rates of wages per hour as distinguished from rates per week 78 trades showed an increase, 15 no change, and for none was the rate lower.

The highest scales per hour paid in May, 1914, in a few of the principal trades were as follows: Bricklayers, 87.5 cents, in Dallas and San Francisco; carpenters, 65 cents, in Chicago; hod carriers, 50 cents, in Portland, St. Louis, Salt Lake City, and San Francisco; painters, 70 cents, in Chicago; plasterers, 87.5 cents, in Dallas and San Francisco; plumbers and gas fitters, 75 cents, in Chicago, Dallas, Portland, St. Louis, Salt Lake City, San Francisco, and Seattle; sheet-metal workers, 68.8 cents, in Chicago and San Francisco; stonecutters, 70 cents, in Portland and San Francisco; structural iron workers, 70 cents, in Cleveland; freight handlers, 60.6 cents, in New Orleans; granite cutters, 68.8 cents, in New York; iron molders, 50 cents, in San Francisco; linotype operators (Hebrew, book and job), 83.3 cents, in New York; compositors (English newspaper), day work, 75 cents, in Seattle.

As to changes in hours of labor, 15 trades showed a reduction of hours between May, 1913, and May, 1914, 77 reported no change, and 1 reported an increase.

In 1914 the union scales in the baking trade show hours in some localities as low as 48 per week, but generally they are higher. The building trades in a majority of the cities covered have an 8-hour day and most building trades also have a Saturday half holiday, either for the whole year or part of the year. Inside wiremen, lathers, marble setters, fresco painters, sign painters, structural-iron workers, and the granite and stone trades all have an 8-hour day in the cities reported, and nearly all have a Saturday half holiday the year round.

The hours of labor in the metal trades range from 44 to 60 per week, 54 being the predominant hours. The printing trades in book and job offices have an 8-hour day in nearly all the cities covered, and in the newspaper offices all trades have an 8-hour day or less.

MARKET FOR AMERICAN WOODS IN GREECE.

[Consul A. B. Cooke, Patras, Aug. 23; supplementing dispatches in COMMERCE REPORTS for Apr. 27 and July 17, 1915.]

As stated in former reports from this consulate, there is a sharp demand for woods of various kinds on the markets of this district, owing to the complete cutting off for the time of the usual sources of supply in Europe.

Importers have already placed considerable orders in the United States, and some of the first orders have arrived. The American woods have proved so satisfactory, so far as they have thus far reached this market, that there is every reason to believe they will be able to take and hold the market even after the return of normal conditions.

American Woods Not Known.

A serious handicap to the promotion of American woods just now, however, is the almost complete ignorance of these woods on the part of the local markets. Until the recent importations, American woods were absolutely unknown here. American exporters, writing in response to reports from this consulate, quote to importers "gum," "red gum," "hardwood," "oak," "highland spruce," and similar terms. These terms mean nothing definite to importers here; and they are consequently in great uncertainty often as to whether the wood quoted will actually meet the needs of the trade in its various lines.

Sample Woods Should Be Sent.

The import trade of this district in woods is important enough to justify American firms in taking careful steps to secure and hold it. It is suggested that interested firms send to this consulate samples of their several woods as indicated below, each sample clearly marked with the commercial name of the wood. Samples should be of sufficient size to show the nature of the wood; say, 2 inches wide, 12 inches long, and $\frac{1}{2}$ inch thick. The samples can be sent by parcel post at the rate of 12 cents per pound, the parcels limited to 11 pounds each. The woods in chief demand here are:

For currant cases: *Spruce, white pine.*

For building materials: *Spruce, pitch pine.*

For currant barrels: *Beech, white oak, probably gums.*

For olives, oil, and wine barrels: *White oak.*

For furniture making: *Walnuts, oaks, maples, pitch pine.*

By far the greatest part of the consumption is for currant cases, building, and currant barrels. A very small part is for furniture making.

All samples received will be placed on exhibition in the rooms of the Patras American Chamber of Commerce, where they can be freely examined at all times. They may bear the addresses of the American firms submitting them. In this way local importers will be able to determine in any case just what sort of American wood they wish to order. The import trade of the district in woods involves annually \$600,000 to \$800,000.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Piano and piano player, No. 18379.—An American consular officer in Australia reports that a business man in his district requests names of American manufacturers of pianos and piano players. Only firms doing an extensive business and selling absolutely reliable instruments need answer. Illustrations of pianos wanted are submitted, and may be examined at the Bureau or its branch offices. (Refer to file No. 64980.) Quotations f. o. b. port of shipment.

Refrigerating and ice-making machinery, No. 18380.—A man in Spain wishes to secure immediately catalogues and terms on refrigerating and ice-making machinery. The capacity of the ice-making machine to be 2 tons of ice in 24 hours. Correspondence and literature to be in Spanish.

Groceries, No. 18381.—A report from an American consular officer in Greece states that a firm wishes to correspond with American exporters of sugar, coffee, rice, pepper, dried codfish, and other canned goods. It is stated that there is a good market in that district for all the articles mentioned. Correspondence may be in English.

Celluloid, No. 18382.—An American consular officer reports that a firm in Switzerland desires to communicate with American firms manufacturing celluloid or its substitute. It is to be used in the manufacture of glasses for medallions and must be colorless, very transparent, and its surface highly polished. Samples are requested with quotations. The utmost care is recommended in the packing, so as to avoid all possible friction and scratches. If the quality is satisfactory, regular monthly orders will be placed. Prices f. o. b. American port or c. i. f. European port. Correspondence should be either in French or German. Samples accompany the report, and they may be inspected at the Bureau or its branch offices. (Refer to file No. 65811.)

Mirrors and plate glass, No. 18383.—A commercial agent of the Bureau reports that the names of American manufacturers of mirrors and plate glass are requested by an American consular officer in Cuba. Catalogues and price lists in Spanish are solicited.

Photographic supplies, No. 18384.—The Bureau is in receipt of a letter from a business man in Colombia stating that he is in the market for photographic and photo-engraving apparatus and chemicals. Catalogues and price lists are requested at once.

General representation, No. 18385.—A man of high commercial and social standing in Uruguay desires to represent American firms in that country. He is especially familiar with all kinds of jewelry, and is well qualified to represent firms, having lived in Uruguay for 20 years.

Sheet iron, etc., No. 18386.—A letter from Greece to this Bureau states that a firm in that country desires the names of manufacturers exporting tinned sheet iron; sheet iron, plain and corrugated; tin in rods; copper in sheets and rods; Belgian iron, No. 2; and sulphate of copper. References given.

Storage batteries, No. 18387.—A commercial agent informs the Bureau that information and prices are desired by a business man in Central America relative to storage batteries suitable for use on tram lines and in the operation of motor boats. Prices should be quoted f. o. b. New York or New Orleans. Correspondence may be in English.

Cotton materials, No. 18388.—An American consul in Canada reports that a firm is in the market for cotton materials to be used in the manufacture of oil mops. It desires to obtain samples and quotations and states that from 5 to 10 bales will be needed monthly, and the amount will increase as the product becomes better known.

Machinery, No. 18389.—A manufacturer of corsets in Spain is desirous of installing all necessary modern machinery for the enlargement of his factory, and for this purpose is sending a member of the firm to the United States to make the necessary purchases, which will include machines for making buckles, and all other parts. The purchasing agent will make his headquarters in New York City. His address may be obtained from the Bureau or its branch offices.

Automobiles and motor cycles, No. 18390.—A report from an American consul in Denmark states that a man with a great deal of experience wishes to represent American manufacturers of automobiles and motor cycles in that country.

Jute yarn and twist, No. 18391.—A firm in Canada requests an American consul to place it in communication with manufacturers of jute yarn and twist, from 2 to 10 ply.

Copal gum, No. 18392.—A paint factory in Brazil informs an American consul that it is in a position to furnish copal gum to American importers and manufacturers. The following prices are quoted: First quality about 20 cents per pound; second quality about 18 cents per pound. f. o. b. Rio de Janeiro. It is stated that the firm has 2,000 kilos on hand and can supply this quantity monthly. Samples of the gum may be examined at the bureau or its branch offices. (Refer to file No. 85431.)

Eggs, No. 18393.—A report from a consular officer in Denmark states that a firm is in the market for large quantities of eggs. Reference given. Correspondence may be in English.

Stationery and office supplies, No. 18394.—An American consul in Chile states that the *Diario Oficial* of July 23, 1915, publishes a call for bids on stationery and office supplies for the State Railways of Chile. The list is detailed and includes letter, carbon, and typewriter paper, ink, sealing wax, erasers, paper clips, etc. The bidder must have an authorized representative established in Chile through whom the bids are to be made. Bids must be accompanied by samples and a deposit of 10 per cent of total value of the contracts. Bids must be handed to El Jefe del Departamento de Materiales y Almacenes, Estacion Alameda, Santiago, Chile, on or before October 14, 1915. The bureau has no further information relative to this opportunity.

CONDITION OF SWEDISH MATCH INDUSTRY.

[Chargé d'Affaires Jefferson Caffery, American Legation, Stockholm, Aug. 25.]

During the last year the Swedish match industry has met with difficulties. It is only through great exertion that it has been able to keep the export market that it has worked up, and it has been extremely difficult to get raw material. At the beginning of the war the import of Russian asp wood into Sweden stopped. Then it was necessary to get the wood from Swedish forests. It has been shown that the Swedish asp can very well be used, and much asp is found in Norrland and also in the Provinces in the southern part of Sweden. The factories in Jönköping have enough wood to last for some time to come. However, the prices of Swedish asp have become very high, and when freight costs are added the factories have found it very much more expensive to use Swedish wood.

In Russia the export of asp wood is not prohibited, but the high freights on the railroads have hindered it. A few cargoes of asp-wood in splintered form have reached Sweden by water via Finland, but as a rule the Swedish factories can not make use of the wood in this form, as it is much too wasteful. Therefore they will have to continue to fill their needs in Sweden.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Repair work, No. 2646.—Sealed proposals will be received at the office of the Lighthouse Inspector, Portland, Oreg., for docking and repairing Columbia River light vessel No. 88. Blank proposals and particulars may be obtained by addressing the above office.

Oil cases, No. 2647.—Sealed proposals will be received at the office of the Lighthouse Inspector, Portland, Oreg., for the sale of 2,000 condemned oil cases, including two empty 5-gallon cans in each case. Further particulars may be obtained by addressing the Lighthouse Inspector.

Condemned structures, No. 2648.—Sealed proposals will be received at the office of the Lighthouse Inspector, Honolulu, T. H., for purchasing condemned lighthouse-keeper's dwelling, small service house, and water tank at Kanahena Point, Maui. Further information and particulars may be obtained from the above office.

Construction work, No. 2649.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until October 27, 1915, for the construction, complete (including mechanical equipment and approaches), of the United States post office at Newcastle, Ind., and Monongahela, Pa. Drawings and specifications may be obtained from the custodian of site at Newcastle, Monongahela, or at the Supervising Architect's Office.

Ice-making and cold-storage plant, No. 2650.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until October 16, 1915, for furnishing, f. o. b. cars, San Francisco, and the installing in Peking, China, of an ice-making and cold-storage plant at the United States Marine Barracks, Peking, China. Plans and specifications may be obtained on application to the Bureau of Yards and Docks.

Books, No. 2651.—Sealed proposals will be received at the Medical Supply Depot, United States Army, 543 Greenwich Street, New York City, until September 27, 1915, for furnishing and delivering at the depot, in good condition, 200 copies of Mason's Handbook for the Hospital Corps and 132 copies of "Commemoration Volume."

Hangars, No. 2652.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until October 16, 1915, for three hangars at the United States Navy Aeronautic Station, Pensacola, Fla. Plans and specifications may be obtained on application to the Bureau of Yards and Docks or to the commandant of the naval station named.

Dredging, No. 2653.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until October 2, 1915, for dredging at the Naval Station, New London, Conn. Plans and specifications may be had on application to the Bureau of Yards and Docks or to the commandant of the naval station named.

Construction work, No. 2654.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until October 30, 1915, for the construction complete (including mechanical equipment and approaches) of the United States post office at Seymour, Ind. Drawings and specifications may be obtained from the custodian of the site at Seymour or at the Washington office.

Construction work, No. 2655.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until October 23, 1915, for a two-story brick building at St. Helena, Navy Yard, Norfolk, Va. Plans and specifications may be obtained on application to the Bureau of Yards and Docks or to the commandant of the navy yard named.

FREE SAMPLES OF PRIZE-WINNING CHINESE TEA.

Representatives of the tea companies in the Province of Hunan, China, whose teas were awarded a Grand Prix at the San Francisco Exposition, are desirous of presenting samples of their products to the wholesale tea merchants of the United States "as a mark of appreciation of the honor conferred upon them." Mr. Allan S. Chow, secretary of the Republic of China's commission to the Panama-Pacific International Exposition, has conveyed this information to Secretary of Commerce Redfield and has asked for the names of the leading American tea merchants for transmission to the Hunan growers' representatives. Mr. Chow may be addressed at San Francisco.

CHILEAN TRADE COMMISSIONER VISITING UNITED STATES.

[Commercial Agent E. E. Judd, New Orleans.]

Mr. Eduardo Carrasco, trade commissioner of the Chilean Government, is at present touring the United States. One of the principal objects of his trip is to interest American capitalists in the establishment of a chain of hotels in Chile to improve living conditions for traveling men visiting that country. Mr. Carrasco has been at New Orleans, Los Angeles, and San Diego, and is now at San Francisco where he expects to spend about a month. He will then go to Portland and Seattle and return to the East by way of Salt Lake City, Denver, Kansas City, St. Louis, and Chicago. Mr. Carrasco has been invited to make his headquarters at the branch offices of the Bureau of Foreign and Domestic Commerce when he is in the cities where they are located. Mr. Carrasco is admirably equipped to give information concerning Chile, and it is hoped that American business men may avail themselves of the opportunity thus presented. He is particularly interested in studying, while here, the methods and organization of the United States Departments of Commerce and of Agriculture.

STANDARDS FOR ELECTRIC SERVICE DISCUSSED.

Electric light and power companies are now subject to regulation by State commissions in more than half of the States of the Union, and by municipal ordinances in a number of cities in States not having commission regulation.

Owing to the very rapid development and constant changes in methods and apparatus, it has heretofore been difficult to fix standards for electric service for general adoption. Developments are, of course, still going on, but the methods of electrical distribution and measurement in common use and the criteria of good service generally accepted have become so largely fixed by practice that it is now possible to formulate standards of service that will be generally acceptable.

Regulation in Every State Except Two.

The popular movement for the regulation of public-utility corporations has spread rapidly since 1907, and there are now corporation commissions, public-service commissions, or railroad commissions in every State save two.

Circular No. 56 of the Bureau of Standards, which may be obtained by application to that bureau, discusses the most important factors constituting and promoting safe and adequate electric service, the circular being based on a careful study of the experience of operating companies and regulating bodies, both State and municipal.

The circular contains, first, rules and recommendations for the regulation of electric service companies by State commissions; second, three different ordinances suitable for adoption by towns and cities in States not having regulation by commissions; third, specifications for the approval of types of electricity meters by commissions; and, fourth, all orders, rules, and regulations so far adopted by commissions for electric service.

Rules Suggested Result of Careful Study.

The rules suggested as suitable for the consideration of State public service commissions are the result of conferences and correspondence with nearly all of the commissions, and careful study and comparison of existing orders and rules.

The suggested regulatory ordinances for electric service in cities are based on a very careful study of the subject and conferences with many operating companies and others qualified to express opinions. Three different ordinances, varying in scope and length, so as to make them useful to municipalities of various sizes from small towns to the largest cities, are proposed and discussed.

FIRE LOSSES IN CORK-GROWING DISTRICTS.

[Consul Paul H. Foster, Jerez de la Frontera, Spain, Aug. 14.]

Forest fires in the cork-growing district of Ubrique, a large part of which is the property of the municipality of Jerez de la Frontera, and which furnishes a considerable portion of the city's income, have been raging for several days past. The loss up to the present time is estimated at \$150,000 and, so far as the present generation is concerned, is irreparable, as 40 to 50 years are needed to bring a cork-oak to maturity.

BRITISH COTTON-GROWING EFFORTS.

[Manchester Guardian, Sept. 10.]

The Council of the British Cotton-Growing Association met this week in Manchester. It was reported that considerable quantities of cotton seed have been distributed in Lagos for planting for the new crop, and the seed is being freely taken by the native farmers. On the whole, the people do not appear to be discouraged by the reduced prices which are being paid for cotton, but are sowing as much as ever. The rainfall has been more satisfactory than for some years, and there is reason to anticipate a large crop next season. The purchases of cotton in Lagos to date amount to 5,856 bales, as compared with 13,415 bales for the same period of last year and 13,557 bales for 1913. The purchases in Northern Nigeria to the end of July were 437 bales, against 505 bales for last year.

It has been decided to close the operations in the Gold Coast and at Illushi (Southern Nigeria), but it is proposed to make arrangements for the Labolabo ginnery to be kept open during the cotton season for the benefit of those planters who may continue to grow cotton.

The new crop in Uganda is now coming forward, although there are difficulties in shipping; the cotton which has arrived up to the present time is of a good quality and is commanding a ready sale at satisfactory prices.

In Nyasaland the buying prices for the new native cotton crop have been fixed after careful deliberation between the director of agriculture and the association's representative. Slight reductions in price have had to be effected in certain districts, but these were inevitable in the present condition of the cotton market, and the governor is satisfied that they are the most liberal terms which could have been offered by buyers. The picking of the new crop has commenced, and it is expected that the crop will be an average one. The council decided that the amount available for advances to planters in Nyasaland next year should be limited to \$10,000.

Fixed Price for West India Sea Island.

Arrangements have been made for guaranteeing a fixed price for the 1915-16 crop of West Indian Sea Island cotton. Should any cotton prove to be superior to the fixed standard a relatively higher price will be paid, and lower prices where the cotton is below the standard. It is hoped that these arrangements will encourage the planters in the West Indies to continue cotton cultivation.

JULY TRAFFIC THROUGH PANAMA CANAL.

[Canal Record, Sept. 8.]

The number of ocean-going vessels passing through the Panama Canal during July—170—was about 65 per cent greater than the average for the preceding months and exceeded the June record figure by 27. The cargo carried through the canal during the month totaled 705,469 tons, exceeding the shipments during any previous month. Vessels moving from the Atlantic to the Pacific numbered 93, and carried 316,773 tons of cargo; those from the Pacific to the Atlantic numbered 77, and carried 388,696 tons of cargo. The tolls collected amounted to \$573,366.

AUSTRIA-HUNGARY'S OFFICIAL FOREIGN-TRADE FIGURES.

[Consul General Albert Halstead, Vienna, Aug. 27.]

Statistics published by the Austro-Hungarian Ministry of Commerce give the exports and imports of the country for the second quarter of 1915, with similar figures for the months April to June, 1914. The comparison reveals a considerable falling off, the decrease in exports being much greater than that in imports. The figures by months for the two years are:

Months.	Imports.		Exports.	
	1914	1915	1914	1915
April.....	\$65,975,080	\$41,028,300	\$46,020,100	\$19,061,700
May.....	67,888,288	35,991,900	47,836,800	15,448,300
June.....	64,006,900	37,717,400	44,863,080	11,628,000
April-June.....	197,864,100	114,735,600	138,709,900	47,136,000

In the first six months of 1915, the imports amounted to \$213,150,000 against \$377,493,000 in the first half of 1914. Exports amounted to \$106,676,000 against \$269,842,000 in 1914.

Figures Given for Three Principal Classes.

These trade figures for the first half of 1915 embrace the three principal classifications—raw materials, partly manufactured goods, and wholly manufactured goods. The figures by classes are:

Classes of goods.	Imports.		Exports.	
	1914	1915	1914	1915
Raw materials.....	227,833,000	117,171,600	87,735,000	51,115,400
Partly finished.....	54,088,000	26,882,500	63,257,000	18,406,300
Manufactures.....	95,572,000	70,095,900	128,850,000	37,067,300

A large proportion of the decrease in imports is in raw materials—principally grains, seeds, cattle and horses, skins and hides, eggs, cotton, wool, flax, and jute. The reduction in the value of the imports of coal is also considerable. The actual reduction in imports is really greater than appears, because the goods were purchased at much higher prices than in 1914.

In partly manufactured goods, only cotton shows an increased import, inasmuch as large quantities of cotton were imported early in 1915. Wholly manufactured goods, generally, show reductions, principally in machinery, silk goods, wool and cotton goods, clothing, and rubber.

Articles of Export Showing Decreased Amounts.

In exports, wholly manufactured goods figure in the loss for the second quarter of 1915. After sugar, cotton, wool and linen products, and clothing show the greatest decrease. The exports of woodenware, leatherware, glassware, ironware, machinery, chemicals, paper, etc., were largely reduced. The exports of partly manufactured goods were much reduced, particularly yarns and leather.

The reduction in the exports of raw materials was chiefly in cattle and horses, hides and skins, eggs, feathers, wood, coal, and raw wool.

Although the quantities of grain, seeds, etc., exported were very much reduced, the higher prices realized show an increased export value.

SUGGESTED PAN AMERICAN LITERATURE EXCHANGE.

[Consul Ross Hazeltine, Cartagena, Colombia, Aug. 5.]

The establishment of a Pan American literature exchange, efficiently equipped and carefully organized, would no doubt prove to be a commercial as well as an artistic success. Such an exchange would mark a distinct advancement in the cultural relations of the United States with Latin America, constituting a coordinate step with the exchange of professors and students, and ultimately leading to a more sympathetic understanding between the Republics of the Western Hemisphere.

The temperament and natural instincts of the Latin Americans are essentially artistic. The percentage of potential orators, artists, and writers is very high. This continual striving, especially in the field of literature, occasionally produces a work of unquestioned merit, of which little or nothing is known in English-speaking countries. This is, for obvious reasons, more often the case with fiction and poetry than with the drama.

The contrast between the character of North American and South American literature is notable, but the appreciation on both sides is keen, even if not widespread. Acquaintance with Spanish literature in the United States is on the whole decidedly limited; it is perhaps confined to such well-known writers as Cervantes, Calderon de la Barca, Alarcón, and Quevedo. In the field of drama American audiences are all too seldom privileged to witness a "Marta of the Lowlands."

North American Literature Admired—Publication in Three Languages.

In Spanish America the vitality and action of North American literature is sincerely admired. For lack of something better American "penny dreadfuls" are widely read, while among the cultured classes the works of Poe, Mark Twain, Longfellow, and a few others are known.

The essential point is not the restricted appreciation, but rather the lack of an adequate medium of exchange. From a commercial viewpoint it would seem expedient to make such exchange trilateral; that is, issue publications in English, Spanish, and Portuguese. Practically the same organization could be utilized for this purpose. Unlike the United States, however, the centers of literature in Latin America are definitely established—a fact that would greatly facilitate the establishment of an efficient exchange. These centers, as a rule, are the respective capitals.

An encouraging feature of the proposed exchange is the vast amount of really good material obtainable. As regards translations, the fields of literature in both North and South America have lain fallow for generations.

With respect to Cartagena, the best connection possible would be the publishing house of J. V. Mogollón & Ca., but, taken as a whole, the field in Colombia could best be reached through Bogota by addressing our legation.

CONSTRUCTION WORK ABROAD.**ARGENTINA.**

[Consul William Dawson, jr., Rosario, Aug. 17.]

Extension of Railway.

The Argentine Ministry of Public Works by a recent decree provided for the delivery of the Administration of State Railways of the portion of the line from Formosa to Embarcacion which has been completed up to kilometer 297. The stretch in question, 185 miles long, will be opened to traffic as soon as formal delivery is made.

Projected Freezing Establishment.

A group of stock raisers of the Province of Corrientes are planning the erection of a freezing establishment. A provisional board has been appointed to take the necessary preliminary steps. It is headed by Sr. Ernesto L. Meabe, Calle San Juan 550, Corrientes. The question of providing an outlet for Corrientes live stock was discussed in the last annual report from this office (Annual Series, No. 38b, Apr. 17, 1915).

Projected New Dam at San Roque.

The legislature of the Province of Cordoba has approved a project presented by the Provincial Government for constructing a new dam at San Roque, the cost of which is estimated at from 5,500,000 to 6,000,000 paper pesos (\$2,335,300 to \$2,547,600). According to newspaper reports the project authorizes the Government to float internal or foreign loans the annual service for interest and amortization of which is not to exceed 500,000 paper pesos (\$212,300) and is to be met by water rates and taxes collected in the irrigated zone.

The present dam, constructed some 30 years ago at a cost of about \$2,000,000 by Carlos Casaffousth, has been the subject of protracted and at times violent discussion. In 1892 the engineer and constructor were prosecuted criminally. The judicial proceedings which resulted in their acquittal revealed numerous defects. In February, 1914, the government of Cordoba appointed a commission of three engineers to study the best means of consolidating the dam, assuring its successful operation and, if possible, increasing its capacity. The commission's report was embodied in the project approved by the provincial legislature. Its conclusions with respect to the existing dam were (1) that it tended to slide; (2) that this tendency began to be noticed when water exceeded 113.5 feet; and (3) that this was all the more serious inasmuch as the materials used did not appear to be homogeneous.

Under the circumstances the commission recommended a new dam with a retention height of 172.2 feet. The construction of this dam would submerge a portion of the State railway from Cordoba to Cosquin, and it is reported that the provincial government will request that the National Government assume the burden of reconstructing the line.

The San Roque Dam furnishes water, light, and power to the city of Cordoba, besides having initiated and made possible the rapid economic progress of the hitherto barren region opened to irrigation. The commission points out in its report that the existing dam has been unable to satisfy demands for irrigation in dry years, and that

the new dam is required to insure a permanent adequate water supply.

The project approved by the legislature provides that contracts shall be let by bids. The matter will be reported on further as appropriate opportunities for the participation of American capital, enterprise, or materials may develop.

CANADA.

[Vice Consul Robert M. Newcomb, Victoria, British Columbia, Sept. 8.]

Paving in Saanich Municipality.

The Saanich municipality of Victoria has decided to lay about a mile of modern paving on Gorge Road and Douglas Street. Asphalt will most likely be used. Address all communications to Municipal Engineer, Royal Oak Post Office, Vancouver Island, British Columbia, Canada.

[Consul Julius D. Dreher, Toronto, Sept. 11.]

New Railway Station in Toronto.

The corner stone of a new \$250,000 passenger station has just been laid in North Toronto for the joint use of the Canadian Pacific and Northern Ontario Railways. It will be a one-story stone structure, 115 by 75 feet, and 155 by 60 baggage room. The clock tower will be 143 feet high. The building will be completed by June, 1916.

[Monetary Times, Toronto, Sept. 17.]

Financing Good Roads.

The building of goods roads in Canada, while stopped to some extent by the lack of funds, continues in many sections of the country. During the fiscal year ending 1914, Quebec Province expended \$3,303,882 on the good-roads movement, ample provision being made out of revenue for meeting sufficient annual interest and sinking fund charges to repay in a term of years the whole amount borrowed for this service. A fairly large amount was spent last year also. This betterment of country roads is adding largely to the value of farm lands, and to the comfort, contentment, and prosperity of the farmers, and the popularizing of agricultural pursuits.

Saskatchewan is another Province making excellent progress with the building of good roads. Ontario for some years has made a policy of better roads of primary consideration. It is building roads to assist settlers in Northern Ontario and also in the more settled communities. Now being constructed is a concrete highway from Toronto to Hamilton, a distance of about 40 miles.

RUSSIA.

[Consul F. Willoughby Smith, Batum, Aug. 12.]

New Railroad Construction.

The Russian Imperial Railroad Commission, it is reported, has completed its examination of the proposed railroad uniting the Shua and Kineshma regions with the basin of the Don and the Caucasus. The commission has sanctioned the construction of the road through Mourom, Melenki, Elatma, Sasovo, Shatzk, Marshansk.

and Tambov, recommending, however, that this line should be united with the projected line Kozlov-Sviatoi Krest.

The construction of the new line is to be shared by two companies. The construction of the road from Marshansk to Kozlov is assigned to the Riazan-Ural Railroad Co., and the balance of the main line to the Moscow-Kazan Railroad.

SOUTH AFRICA.

[Consul Edwin N. Gunsaulus, Johannesburg, Aug. 12.]

New Railway Line from Messina, Transvaal, to Delagoa Bay.

There has just been completed the section of the new railway line from Tzaneen to Zoekmakaar. This marks an important development in the railways in central Transvaal by affording a direct means of communication from the eastern to the northern railway lines, this section being the second constructed under an agreement with the Messina Copper Co., under which that company guarantees for 10 years interest on the capital cost. The other railway section, constructed under the agreement, was the extension from Bandolier Kop to Messina, which was opened a little over a year ago. By this new construction through connection has now been effected between Messina and Delagoa Bay, obviating the circuitous route via Pretoria, the distance saved being 262 miles. The estimated cost of the two sections constructed under the agreement was \$3,649,875, and the actual expenditure is said to be well within this amount.

Following are some of the more important particulars concerning this new railway line, as published: Length of line, 56 miles; permanent way material—Rails, 60-pound, section with steel sleepers; maximum grade, 1 in 50 (compensated); maximum curve, 7 chains radius; height above sea level, Tzaneen, 2,372 feet; Zoekmakaar, 3,846 feet; survey commenced December, 1912; survey completed May, 1913; construction commenced July, 1913; construction completed August, 1915.

The line, after leaving Tzaneen, traverses the well-known and fertile valley of Duivels Kloof, where a considerable extent of land is under cultivation, and in this district passes through or adjacent to the Tzaneen and Westphalia Estates. The following are the more important river crossings: Groot Letaba, Politsi, Ramadiepe, Koodoo, and Middle Letaba.

A striking feature of the route is the severe and continuous ascent from the Middle Letaba River to the high veld within a few miles of the junction, being a distance of 15 miles, the difference in level being approximately 1,425 feet.

SPAIN.

[Vice Consul José M. Gay, Madrid, Aug. 21.]

Proposals for Paving Work in Madrid.

By official decree of August 20, 1915, the "Ayuntamiento de Madrid" is authorized to call for new proposals for asphalt paving work that was awarded to Mr. Clive E. Pearson, who renounced it. Plans and conditions are on file in the "Ayuntamiento de Madrid, Seccion de Obras," where they may be seen. This construction was noted in Daily Consular and Trade Reports for March 28, 1914.

UNITED KINGDOM.

[London Times, Sept. 9.]

Electricity Scheme for Ireland.

The falls of Lough Erne at Belleek and of the Shannon near Limerick are to be utilized. A company is seeking parliamentary powers to employ this vast power for lighting most of Ireland by electricity.

Canals above the falls will carry the headwater to fixed places lower down, and the volume of water is immense.

Mr. Theodore Stevens is the consulting engineer, and Mr. P. J. McAndrew, Sheen Lodge, Bundoran, superintending engineer, with Mr. Blayney Winslow as secretary.

The necessary capital has been subscribed by the company. The men are at work now mapping the route of the necessary canals and of the lines of cable to conduct the power.

SUCCESS OF CANADIAN NATIONAL EXHIBITION.

[Consul Julius D. Dreher, Toronto, Sept. 14.]

IN COMMERCE REPORTS for August 6 last a report from this office was published regarding the proposed Canadian National Exhibition at Toronto, August 28 to September 13. The exhibition proved to be a decided success, the total attendance having been a little more than 100,000 in excess of that of last year. This was named "Patriotic Year" and greater production was emphasized in various ways. The live-stock exhibits were numerous and creditable in a high degree. The extensive agricultural exhibits of various Provinces attracted much attention. The fine fruits and vegetables were well worth studying. Canadian manufacturers made a good showing. There were, as in former years, many exhibits from the United States, but the attendance of visitors from across the border was not as large as in former years.

BETTER SHIPPING FACILITIES TO AUSTRALASIA.

[Consul General Alfred A. Winslow, Auckland, Aug. 18.]

Shipping facilities to this part of the world are much better than for the past year, and the future promises well. The Union Steamship Co. advises that, in addition to regular sailings of passenger and freight steamers every four weeks from each port, a steamer is to load general merchandise at Vancouver about the end of September, and at San Francisco early in October, for Auckland, Melbourne, and Sydney. The *Waimarino* is to load at Vancouver about the third week in October and at San Francisco at the end of October for Auckland and Sydney. The *Waihemo* will load at Vancouver and San Francisco early in October for Wellington and Sydney.

This should encourage exporters to push for business in this field, where the demand is so great. There is a shortage here along most lines.

Owing to the many accidents caused by motor cars being driven at a reckless speed through the crowded streets of Peking, China, the police authorities are drawing up regulations.

THE FAMOUS LICHEE OF CHINA.

[Consul General F. D. Cheshire, Canton, China.]

The lichee (*Litchi chinensis*), one of the most widely known fruits throughout China, is produced in South China, chiefly in the Provinces of Fukien and Kwangtung, but also in Szechwan. A small quantity is grown in other southern Provinces, but none whatever in the north. It is said that lichees grown in other than the three Provinces named are inferior in quality and almost unfit for edible purposes. This report will be confined to the lichees grown in Kwangtung Province.

The principal lichee-producing districts in Kwangtung Province are Namhoi, Pun Yu, Tsang Shing, and Tung Kun. Some lichees are grown in the Heungshan, Shuntak, and Samshui districts, and while they are produced in abundance in the Yeung Kong and Shui Tung districts they are of inferior quality.

Fruit Deteriorates Rapidly When Picked.

The fruit of the lichee tree, when plucked, rapidly deteriorates, and can be kept in its original state for only three days at most. A plan has been adopted for preserving the fruit by storing it in bamboo after sprinkling with a weak salt solution and sealing both ends of the bamboo with clay. In this manner the fruit remains fresh for about two weeks, allowing of its being exported to Shanghai and Peking and ports on the Yangtze River.

Dried lichees are very popular in foreign countries. The fruit is dried in two ways—by sun and by fire. The sun-dried lichee commands the better price, it having a finer flavor than the fire-dried fruit. There are but two or three species of the lichee that are suitable for drying purposes, viz, the “no-mai-chi,” the “kwai-mi,” and the “wai-chi.”

The purchase of lichees by the wholesale dealers from the producers is largely one of speculation, the former bargaining with the latter for the fruit during April and May, while the trees are yet in blossom, a certain amount being agreed upon for each tree. If the tree is unfruitful, the purchaser must suffer the consequences. The actual quantity of fruit produced annually is a difficult matter to ascertain accurately, but from information received from the lichee growers the total amount of lichees annually produced in the Kwangtung Province is estimated at 1,500,000 pounds.

Cultural Methods—Grafting Hastens Bearing.

The selection of suitable soil for the planting of lichee trees is most essential. Alluvial soil lying along the banks of fresh-water streams is to be preferred. A soil composed of sand and mud in about equal proportions and about 6 feet above water is considered ideal. The lichee tree's two deadliest enemies are salt water and cold, and for this reason it is difficult to grow lichee trees even in South China. An abundance of manure is essential if the tree would flourish. In winter the young trees must be protected from the cold by wrapping the trunks with straw and covering the base of the tree with a mixture of hay and mud, and this process must be continued until the trees have reached the age of 40 to 50 years.

The season for planting the lichee tree is in the spring. The seed or kernel from the fruit is placed in the ground and protected with

manure and mud. When the tree is 1 year old it is transplanted to a location near a stream, if possible. At the age of 5 years the tree comes into bearing, but the fruit is of a poor quality and gradually improves as the tree matures. Fruit of a good quality, as a rule, can not be expected until the tree is 30 to 40 years of age. The life of the lichee tree is several hundred years. Grafting may be employed to good purpose if it is desired to hasten production, and for this purpose the Chinese select the "kwai" tree (*Cinnamomum cassia*) and the "wai" tree (*Sophora japonica*). Good fruit is usually obtained from trees that have been grafted after the lapse of three to five years.

Harvest Period.

In April or May the lichee tree is in blossom, and if during these months it is visited by strong winds and heavy rains, in all probability it will not bear fruit. Generally speaking, the lichee harvest occurs in June and July, one species after another coming to maturity. The poorest fruit marks the beginning and end of the season, the best coming in during the middle of the season.

It is said by the Chinese, and it is a very interesting fact to note, that prior to the plucking of the tree it is immune from the ravages of insects and birds. The tree is protected, the Chinese say, by a black-winged insect that spins its web in the tree and emits an unpleasant odor which effectually protects it from destructive insects and birds; but if any of the fruit is plucked, the tree is deserted by the black-winged insect and is left a prey to its enemies. Accordingly, the farmer who is wise will take the precaution to strip the trees of all of their fruit as quickly as possible.

VENEZUELAN PAPER MADE FROM AQUATIC PLANT.

[Consul Homer Brett, La Guaira, Aug. 27.]

The paper factory at Maracay, Venezuela, reference to which was published in Daily Consular and Trade Reports January 27, 1913, is about completed and is expected to be in operation before the end of the year. The building is of Venezuelan cement, the roof of Belgian-galvanized iron, and all the paper-making machinery is from the firm of Fullner, of Warmbrunn, Silesia.

Only the motive power is American. This consists of a hydro-electric installation at Cheroni which will develop 300 horsepower in the wet and 200 in the dry season. To date, 950,000 bolivars (bolivar=\$0.193) have been expended on the plant. The raw material consists of an aquatic plant which grows in great quantity on the margins of Lake Tacarigua, near the shore of which the factory is situated. Wrapping paper and strawboard will be produced at first, the capacity of the plant being 10 tons in 24 hours.

Any communications regarding this factory should be addressed, Dr. Manuel Leon Quintero, Caracas.

Pig raising in the West Indies is to be encouraged by the British Government, which has the industry investigated by a Canadian expert. The British West Indies import annually \$850,000 of pork products.

COAL TRADE IN SOUTHERN ITALY.

[Consul Jay White, Naples, Italy, Aug. 5.]

During 1914 imports of American coal to Naples amounted to 243,468 tons, as compared with 172,709 tons in 1913 and 82,167 tons in 1912. The increase is principally due to the present European war and the difficulty in obtaining shipments from the United Kingdom, as well as to the high exchange. Of the total amount imported in 1914, British bottoms carried 159,214 tons, while other vessels brought 84,214 tons.

Italy has practically no coal fields of its own, and because of this fact coal is imported free of duty.

Below are statistics of coal imports for all Italy—the report of the Italian royal Minister of Finance:

Country.	1911	1912	1913
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Austria-Hungary.....	85,383	177,307	133,838
Belgium.....	25,160	24,364	4,358
France.....	100,110	170,565	164,674
Germany.....	442,935	898,501	949,113
Great Britain.....	8,767,852	8,637,219	9,388,139
United States.....	14,063	68,032	93,520
Holland.....	167,676	75,494	72,564
All other.....	5,218	14,746	6,625
Total tons.....	9,597,882	10,057,228	10,810,880
Total value.....	\$53,707,151	\$69,877,630	\$75,113,855

With respect to the United States there is a marked discrepancy between these and the following figures (from the report of the Italian Chamber of Commerce of Naples) concerning the importation of coal into southern Italy in 1913: From Great Britain, 1,164,095 tons; from United States, 172,709 tons; from other countries, 222,728 tons.

Expenses of Dockage—Amount of Coal on Hand.

The expenses of dockage at Naples are as follows: Stevedoring, 1 lire per ton; pilotage, 300 lire; mooring and unmooring, 50 lire; port dues per net register, 1.40 lire; towage, 175 lire; customs dues (spedizione), 100 lire. It is estimated that on a cargo of 2,000 tons the outlay is about \$750.

There are said to be in Naples at the present time, aside from the naval and State supplies, about 100,000 tons of coal, and of this amount 15,000 tons are American coal. Several cargoes of American coal are en route for Naples now. One firm last year had contracts for 600,000 tons of American coal, but the freight rates at that time prohibited the importation.

Prices at Naples—Method of Unloading.

The price of American coal delivered at Naples is 53s. (\$12.88), although the Italian Government has a contract for the delivery of 200,000 tons of American coal to any port on the west coast of Italy c. i. f. 53s. 6d. (\$13) per ton. The selling price fluctuates between 54s. (\$13.12) and 60s. (\$14.58).

Of the American coal brought to Naples in 1914, 5,954 tons came from New York, 7,100 tons from Philadelphia, 15,319 tons from Bal-

timore, 61,996 tons from Newport News, and 153,099 tons from Norfolk.

In the port of Naples are several moles where coal is deposited. Among these are the Mola Martello, Mola S. Vincenzo, and the Mola Orientale. The ships usually, however, discharge into lighters, and these often lie off shore until the cargo is needed. There are no modern means of unloading coal in the port. Longshoremen convey the coal to shore in baskets or panniers borne upon the shoulder, a basket to a man. There is seldom any delay in unloading a vessel, since the men engaged in this business are exceedingly numerous about the docks.

[Lists of coal dealers in southern Italy and of some of the principal freight agents in Naples may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65215.]

INCREASED COST OF FOODSTUFFS IN GREECE.

[Vice Consul George P. Waller, jr., Athens, Aug. 17.]

There has been a rapid rise in the prices of foodstuffs in Greece since the beginning of the war. According to authoritative publications, the increase in the price of cereals and flour has been 50 per cent, legumes have increased 45 per cent, while the price of meats has remained practically stationary. This is perhaps explained by the fact that the average Greek is not a consumer of meat. The increase in cost of flour is due to the closing of the Dardanelles and the high freight rates on this commodity from America.

The rise in cost of the following articles in the six months from January to June, inclusive, is shown here by percentages: Wheat, 2 per cent; barley, 6 per cent; corn, 40 per cent; semolina, 15 per cent; farina, 20 per cent; bread, 9 per cent; beans, 18 per cent; chick peas, 40 per cent.

Prices in Athens Retail Markets—Advance in Rents.

Eliminating the comparatively trifling rise in wheat and barley—these having reached the highest point in their price curve before January—it will be seen that the average increase during this period is approximately 24 per cent.

The following prices (per pound in United States currency, except for chickens and geese) prevailed in the Athens retail markets on July 17: Cereals—Wheat, \$0.04; barley, \$0.025; corn, \$0.034; best white bread, \$0.047. Legumes—Beans, \$0.068; chick peas, \$0.054; potatoes, white, \$0.027; tomatoes, \$0.027. Meats—Beef, \$0.15; veal, \$0.20; chickens, each, \$0.57; geese, each, \$0.95. Fish—Mullet, \$0.27; salt cod, \$0.10. Butter, \$0.38; olive oil, \$0.12; eggs, \$0.03; cheese, sliced, \$0.135; olives, \$0.068; sugar, \$0.10; rice, \$0.09.

Another disquieting factor in present economic conditions is the unprecedented increase in rents, conservatively estimated as ranging from 25 to 40 per cent. This has been caused by the presence of large numbers of Greeks from all parts of Europe and Asia Minor who have gathered in Athens since the beginning of the war, as well as of various foreign missions which have been established here since that time.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Navy Department supplies, No. 2656.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., until October 26, 1915, for furnishing the following materials. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 8825, for 100,000 feet teak logs; and Schedule 8827, tinned bacon, tinned lima beans, tinned string beans, California white beans, tinned corned beef, tinned corn, lard, macaroni, evaporated milk, tinned pears, tinned peas, baking powder, curry powder, rice, salt, assorted spices, sirup, sugar in sacks, No. 3 tinned tomatoes, and vinegar. Bids will be received until October 19, 1915, for the following: Schedule 8812, deck scrubbing brushes, and handles for deck scrubbing brushes, and schedule 8813, motor driven fans.

Navy Department supplies, No. 2657.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., until October 12, 1915, for furnishing the following materials. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 8805, ammunition trucks and storage-battery trucks; schedule 8806, rotating copper bands and steel forgings; schedule 8807, swinging hose reels and galvanized-steel tanks; schedule 8808, meat and food grinders and kitchen and cake machines; schedule 8809, meat and food choppers, steam jacketed kettles, dish-washing machines, dough-mixing machines, hand-operated meat-slicing machines, potato-peeling machines, and 80-gallon coffee urns; schedule 8810, sand-blast system; schedule 8811, furnishing and installing mechanical telegraph transmitters; schedule 8814, files; schedule 8816, leaded and armored conductors; schedule 8817, medium bar steel and steel floor plates; schedule 8818, rubber boots; schedule 8819, cotton canvas; schedule 8820, rubber-covered wire; schedule 8821, self-closing brass faucets, unbleached cotton sheeting, cotton twine, and baled wood cork in sheets; schedule 8822, hack-saw blades, composition unions, locking devices for metal lockers, brass spur grommets, hammers, padlocks, block-iron planes, handsaws, and screw drivers; schedule 8823, Leyden jars; schedule 8824, brass bibb cocks, cutting compound, valve-reseating machines, and lard mineral oil; and schedule 8826, ash (firsts), rough white oak, dressed white pine, rough yellow pine, and rough spruce.

Concrete flooring, No. 2658.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until October 16, 1915, for a reinforced concrete floor in pattern shop, building No. 42, United States Navy Yard, Boston, Mass. Plans and specifications may be obtained on application to the Bureau of Yards and Docks or to the commandant of the navy yard named.

Plumbing supplies, No. 2659.—Sealed proposals will be received at the office of the Superintendent of Prisons, Department of Justice, Washington, D. C., until October 21, 1915, for furnishing and delivering at the United States penitentiary, Atlanta, Ga., plumbing pipe, fittings and materials for west main cell wing, in accordance with specifications, copies of which may be had on application to the Washington office.

Foodstuffs, No. 2660.—Sealed proposals will be received at the general depot of the Quartermaster Corps, 115 East Ontario Street, Chicago, Ill., until September 28, 1915, for furnishing serial No. 18, corned beef hash; serial No. 205, lard; serial No. 261, pork sausage; serial No. 262, V. S. sausage; and serial No. 287, beef tongue.

Dredging, No. 2661.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until October 9, 1915, for dredging at the navy yard, Norfolk, Va. Plans and specifications may be had on application at the Washington office or to the commandant of the navy yard named.

Construction work, No. 2662.—Sealed proposals will be received at the office of the United States Reclamation Service, Montrose, Colo., until October 20, 1915, for the construction of about 11 miles of ironstone canal, Uncompahgre Valley project, in the vicinity of Olathe, Colo. The work involves the excavation of about 200,200 cubic yards of material in open cut. Further particulars may be had on application to the United States Reclamation Service, Montrose, Colo., Tramway Building, Denver, Colo., or Washington, D. C.

Post-office construction, No. 2663.—Sealed proposals will be received at the Office of the Supervising Architect, Treasury Department, Washington, D. C., until November 1, 1915, for the construction, complete (including mechanical equipment), of the United States post-office building at Merrill, Wis. Drawings and specifications may be obtained from the custodian of the site at Merrill, Wis., or at the Washington office.

Foodstuffs, No. 2664.—Sealed proposals will be received at the office of the depot quartermaster, United States Army, Kansas City, Mo.; depot quartermaster, United States Army, Chicago, Ill.; or the depot quartermaster, United States Army, Omaha, Nebr., until October 1, 1915, for furnishing serials Nos. 8 and 10, bacon. Proposals for delivery of serial 8, bacon packed in veneer crates of about 100 pounds net each, and in fiber boxes of about 50 pounds net each, are invited and will be considered. Specifications for veneer crates and fiber boxes furnished on application.

ADDITIONS TO RADIO STATIONS OF UNITED STATES.

Land stations at Cincinnati and Lima, Ohio, and Mobile, Ala., have been added to the list of radio stations of the United States, the Bureau of Navigation announces. All three are classed as furnishing private service, without regular hours, and all are of similar wave lengths, ranging from 200 to 450. The records of ownership are: Cincinnati—controlled by Clayton M. Howes (Hughes High School); Lima—J. E. Collins (board of education); Mobile—Ben W. Martin.

Additions to the ship stations are: *Chalmette* (wave length, 300 and 600), owned by Southern Pacific Co.; *Mukilteo* (300 and 600), Charles Nelson Co.; *Remlik* (300 and 600), Willis S. Kilmer; *Roamer*, owned by State of Florida. The *Remlik*, which is operated by the Marconi Co., is for general public use in the North and South American service and for transoceanic messages.

The publication, List of Radio Stations of the United States, edition of July 1, 1915, is now in the hands of the printer and will be issued soon by the Bureau of Navigation. Changes in the radio service that may be announced in October will be supplementary to that publication.

BRITISH CHAMBER OF COMMERCE IN URUGUAY.

[American Minister R. E. Jeffery, Montevideo, July 24; see also COMMERCE REPORTS for June 12 and Aug. 16.]

At a meeting of the executive committee of the newly formed British Chamber of Commerce in Uruguay, held on the 22d instant, Mr. A. B. Drayton, local manager of the Standard Life Assurance Co., was elected secretary of the chamber. The following gentlemen were elected chairmen of various subcommittees: Banks and financial houses, Mr. E. Richards; camp agents and "estancieros," Mr. Henry Wilson; coal, Mr. T. F. Lane; dry goods, Mr. F. W. Gardiner; exporters and importers, Mr. E. Buckland Cooper; iron and hardware, Mr. J. Fraser; railways, tramways, and engineering, Mr. C. W. Bayne; insurance, Mr. A. B. Drayton; shipping, Mr. R. H. Stapledon.

Offices for the chamber of commerce will be opened in the course of a few days at Calle Rincon 506, Montevideo.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Fancy paper goods, No. 18395.—A firm in Switzerland informs an American consular officer that it desires to import all kinds of fancy paper goods, novelties, and specialties such as are used in hotels, restaurants, pastry shops, and tea rooms, namely, lace-edged papers, napkins, towels, toilet paper, and paper articles for advertising. Samples are requested with quotations. Prices f. o. b. American port or c. i. f. European port. References can be obtained. Correspondence may be in English.

Machinery, etc., No. 18396.—A Portuguese firm desires to get in touch with American manufacturers of materials for cement making, such as machinery, steel balls, crushers, etc. Catalogues and price lists are solicited. Correspondence may be in English.

Printing supplies, paper, stationery, etc., No. 18397.—A business man in Spain who is interested in the importation of printing supplies, including presses and other machinery, and type, paper, stationery, office supplies, advertising novelties, paints, drugs, umbrellas, and toys, wishes to obtain catalogues, prices, and terms from American manufacturers. References given. Correspondence and literature should be in Spanish.

Electrical supplies, No. 18398.—A consular officer in the Netherlands reports that a firm in that country wishes to establish commercial relations with American manufacturers of electrical supplies. It states that first-class references can be given. Correspondence may be in English.

Printing paper and cardboards, No. 18399.—A report from an American consul in Switzerland states that a firm in his district desires to correspond with American manufacturers or exporters of printing paper and cardboard. The firm is willing to accept customary American export terms and conditions, prices, c. i. f. European port and f. o. b. American port. Samples are requested with quotations. References obtainable. Correspondence may be in English.

Chemicals and drugs, No. 18400.—An American consular officer in India reports that a firm in his district desires to communicate with American manufacturers of chemicals and drugs.

Bromide, No. 18401.—A man in Spain informs an American consular officer that he desires to purchase immediately about 100 kilos of bromide for industrial purposes. Prices and terms c. i. f. foreign port are requested. Correspondence should be in Spanish.

Fruit, olives, etc., No. 18402.—A firm in Greece wishes to correspond with American importers of dried currants, figs, and olives in brine.

Bed quilts, ice-cream freezers, etc., No. 18403.—A wholesale and retail firm on the East African coast desires to receive catalogues of bed quilts, ice-cream freezers, musical instruments, and slates for schoolboys. Prices and terms are requested immediately. Correspondence may be in English.

Hosiery, No. 18404.—An American consul in Canada reports that a manufacturer's agent desires to correspond with firms in the United States manufacturing and exporting hosiery of all kinds for women.

Acetic acid, etc., No. 18405.—An American consular officer in England reports that an aniline color, chemical, and dyestuff merchant desires to receive quotations from American manufacturers and exporters of acetic acid, hematin crystals and paste, and fustic acid. If possible, quotations should be c. i. f. British port. The firm will act as agent or purchase outright.

Drugs, medicines, and chemicals, No. 18406.—A business man in Spain informs an American consul that he wishes to obtain catalogues, prices, and terms for regular line of drugs, medicines, and chemicals, such as are handled by apothecaries and chemical dealers. Correspondence and literature should be in Spanish.

Machinery, No. 18407.—This bureau is in receipt of a letter stating that a good second-hand machine is wanted for making sets of bass strings for repairing various makes of pianos. An electric motor sufficiently large to run the machine is to be supplied. There is also a request for a small outfit for making paper music rolls for player pianos.

Made-in-America Doll Heads.

The United States Geological Survey has informed the Bureau of Foreign and Domestic Commerce that the manufacture of porcelain doll heads has been established in Philadelphia. This, the Survey remarks, is a new industry for the United States.

Heretofore the American demand for such heads has been met from abroad (chiefly from Germany). The exact value of these importations, however, is not shown by official records, the heads being included with statistics for dolls. In the fiscal year 1915 imports of "dolls and parts of" into the United States amounted to \$1,698,131, against a total of \$1,816,496 during 1914, \$1,563,184 in 1913, and \$1,422,292 in 1912.

NATIONAL COLORS ON SIDES OF VESSELS.

The United States Bureau of Navigation brings to the attention of American shipping interests the following letter from Count J. H. von Bernstorff, German Ambassador to this country:

MR. SECRETARY OF STATE:

The Imperial Government has advised me that merchant vessels which desire to show their neutral allegiance by painting their national colors on the sides often make the mistake of having those distinctive signs so small that they can not be made out from a distance.

Pursuant to instructions received, I leave it with your excellency to bring the foregoing to the notice of American shipowners in their own interests.

Accept, Mr. Secretary of State, the renewed assurance of my most distinguished high consideration.

J. BERNSTORFF.

To his excellency the Secretary of State of the United States,
MR. ROBERT LANSING.

RESULTS OF FOREIGN TRADE OPPORTUNITIES.

The Bureau of Foreign and Domestic Commerce is in receipt of a letter from a business firm in South America, stating that as a result of the publication of Foreign Trade Opportunity No. 17292 in COMMERCE REPORTS June 19, 1915, it has made a contract with a firm in the United States for a fortnightly shipment of peanuts.

RISEING COST OF CHINESE COTTON GOODS.

[Commercial Agent Ralph M. Odell, Shanghai, China, Aug. 3.]

The past few weeks have been marked by a notable increase in the prices quoted on sheetings and drills made in the Shanghai cotton mills—amounting in some cases to 15 or 20 per cent. Two months ago, for example, 36-inch sheetings were selling at 3.30 to 3.85 Shanghai taels per piece of 40 yards, whereas the same goods are now quoted at 3.85 to 3.90 Shanghai taels. When the lower prices were ruling the tael was worth about \$0.55 in American currency, making the cost of the goods \$1.81 to \$1.84 per piece; the value of silver has since declined and the tael is now worth only \$0.54, making the present price \$2.08 to \$2.11 per piece.

The strength of the market has been partly due to the higher prices of Chinese cotton which are now ruling—being about 1 tael per picul (\$0.54 per 133½ pounds) more than they were in May and June, but largely to the boycott of Japanese goods, which has been carried on in China during the past few months. This boycott has resulted in a considerable curtailment in the sales of Japanese sheetings and drills and a more active demand for similar goods which are manufactured in Chinese mills. The extent and effectiveness of the boycott is indicated by the fact that, although the prices of Japanese goods have not been advanced and they are now offered at much lower figures than the native article, the Chinese, to a very great extent, are buying the latter and refusing to purchase Japanese importations.

The following table shows the present prices of some of the principal brands of Chinese, Japanese, and American sheetings and drills sold in this market:

GREY SHEETINGS, 36 INCHES WIDE, 40 YARDS PER PIECE.

Brand.	Picks per inch.	Pounds per piece.	Yards per pound.	Shanghai taels per piece.	Dollars per piece.	Cents per yard.

Pacolet.....			2.85	5.50	2.97	7.42
Pepperall.....			2.85	5.85	3.16	7.90

In making the conversions in the above table the Shanghai tael is taken at \$0.54. The difference in the price of two cloths of the same weight and construction is due to the fact that some of the brands are better known and more firmly established on the market, and hence command better prices than others. All prices are as quoted at the warehouses in Shanghai.

As compared with Chinese and Japanese goods, it will be noted that the prices of American sheetings and drills are considerably higher, the difference in many cases amounting to 20 or 30 per cent. In spite of this fact, however, there has been a better demand for American sheetings and drills recently, and stocks are moving somewhat more freely than they have for some time. Unquestionably, the boycott of Japanese goods has had a beneficial effect on our trade, but this is a temporary movement and can not be counted on as a permanent factor in the market.

Already the sales of Japanese yarn, which had reached a very low point, have begun to increase, and there is little doubt that the demand for Japanese piece goods will follow the same course. So long as there is such a wide discrepancy in the prices of our own sheetings and drills and those of similar goods supplied by the Chinese and Japanese mills we can not hope appreciably to increase our trade in these lines. The point of this is to emphasize the suggestion which has previously been made—that American manufacturers must turn their attention to other classes of cotton goods, particularly gray and white shirtings, prints, poplins, Italians, Venetians, and velvets—lines in which the Japanese and Chinese mills do not compete, but which are supplied in large quantities by England—if they expect to extend the sale of their goods in this large and important market.

A Johannesburg firm has ordered \$12,500 worth of sugar of lead from an Ohio chemical works, whose address was furnished by Consul Edwin N. Gunsaulus, stationed in that South African city.

PHILIPPINE TRADE IN THE YEAR ENDING JUNE, 1915.

In the Philippine foreign-trade movement for the year ending June, 1915, the adverse effect of the European war was the leading factor. Imports, amounting to \$44,479,861, declined \$11,500,000, or 20 per cent below the 1914 value; and, though exports were only nominally less than the \$51,000,000 total of the previous year, greatly increased production of copra alone saved the total, and the high price for sugar was the only marked war benefit in an export trade that was very generally reduced.

The shrinkage in imports that followed the opening of the war showed improvement later, and the total for the latter half of the year was materially increased; but, since this was coincident with increasing purchases of foreign rice to meet the local crop shortage, the apparent trade improvement is somewhat discounted. Rice imports of \$5,418,301 practically doubled those of the previous year, which were very small as a result of exceptionally large crops; and, if this adverse increase of \$2,500,000 in rice is eliminated, the decline in the general import trade for the year reaches \$14,000,000, or 25 per cent.

Though importations were subject to very general reductions throughout, the exceptionally large \$10,000,000 iron and steel trade of 1914 decreased most noticeably and amounted to but \$4,000,000 in 1915. It was, however, more exclusively American than ever before, imports from the United States amounting to 78 per cent. The imports continued to decline and were still smaller in the latter half of the year.

In the cotton textile trade, however, which also declined heavily in the early months of the war and showed a shrinkage of approximately \$1,500,000 for the year, there was marked recovery and resumption of practically normal values in the closing six months, during which period the trade became even more exclusively American, constituting over 80 per cent of the total.

The recovery in copra production from recent disasters was the striking feature in the export trade, with export quantities more than double the exceptionally small trade of the previous year. The price, which had begun to decline before the war, reached an exceedingly low level in the early months succeeding, and, though in recent months there has been improvement, the \$4,000,000 increase in the yearly total has not been commensurate with the large quantity marketed. The trade followed the lines of previous years with the exception of shipments to Germany, which gave place to a new Italian trade of considerable importance.

The resumption of normal hemp production seemed indicated in exports immediately preceding the war, but for several months thereafter shipments dwindled, and though approximately normal conditions have more recently been resumed, the quantity exported for the year fell below the low level of the previous year; and this, combined with lower average prices, resulted in a decrease of \$3,000,000 in value. British purchases, which under peace conditions are to a considerable extent for reexport, showed some curtailment, while the United States, normally a distinctly manufacturing market for the fiber, was credited, in the reduced trade of the year, with larger quantities than for some time past.

While exports of sugar were considerably less in quantity, the crop of 1913-14 was to an unusually large extent marketed prior to the end of June, 1914, whereas the crop of 1914-15, in consequence of a shortage in tonnage as well as of the disposition to hold for better prices, has moved out slowly, with indications of large stocks held in warehouse at the close of the year ending June, 1915. With war prices realized on exports to the end of June and with considerable quantities yet to come forward at good prices, the sugar industry presents a more prosperous condition than even that indicated by the annual figures. The effect of war prices is indicated by a slightly larger value realized on the 184,060 long tons exported in 1915 than on the 209,606 long tons of the previous year. The oriental competition continued stronger than in the first years of free trade and American shipments only slightly exceed half the total.

Exports of cigars declined, and though there was some recovery in the reduced American demand, the average was lower, and the value of the American trade was below that of the previous year, while the important Oriental market was characterized by reduced buying. The conspicuous war feature in a shrinkage of \$500,000 in the leaf tobacco trade was the interruption of shipments to Austria-Hungary, which country has heretofore been a heavy purchaser of Philippine leaf tobacco.

Among minor exports there was a very general reduction in values, with the notable exception of coconut oil. This newest export industry continued to increase its output, and exceeded in value the cigar trade, which has heretofore ranked as a leading export manufacturing industry of the islands.

In the reduced import trade for the year the United States continued to supply about half the total, while shipments to the United States increased slightly and constituted about 45 per cent of the export trade.

The following table shows the imports and exports of the principal commodities for the years ending June 30, 1914, and 1915, segregated to indicate the proportions coming from and going to the United States:

FREIGHT TRAFFIC OVER ENGLISH TRAMWAY.

[Consul Homer M. Byington, Leeds, Sept. 9.]

The Leeds Municipal Tramway management is planning a freight service in order to relieve heavy hauling by vehicles through the central part of the city. A tramway siding is being built at Harehills, which will provide tramway shipping facilities for the fire clay which is now hauled by steam tractors with trailers over the city streets.

The municipal tramways committee is also considering the further development of the traffic in merchandise. A point considered to be in favor of such an extension is the position of Leeds in relation to the various railway systems. The north, northwest, and northeast parts of the city, on account of their comparative remoteness from the railway termini and the river Aire, would be benefited by a system of goods' conveyance. As an illustration it is suggested that the establishment of depots in Headingley, Meanwood, Chapeltown, and Roundhay, to which, say, coal or other materials could be conveyed from the railways or the river wharves on the tramways for distribution in the respective localities, would have much to commend it as a matter of public economy and convenience.

While no detailed plan has been formulated, this idea may be placed in operation, the manager states, although there is no intention of competing with private enterprise. The motive is solely to diminish heavy street traffic and to provide a system of transport that will entail less expenditure in repairing the wear and tear of the roads.

In the discovery of phosphate of lime deposits in the Banff National Park, Canadian Rockies, Consul Dreher, of Toronto, states Canada is much interested in obtaining a domestic supply of this fertilizer material.

COTTON IMPORTS AND CONSUMPTION IN GREAT BRITAIN.

[Consul Ross E. Holaday, Manchester, England, Sept. 6.]

According to the annual circular of the Liverpool Cotton Association just issued, the total imports of all growths of cotton into Great Britain for the season ended July 31, amounted to 5,130,125 bales compared with 4,875,737 bales in the previous season. American cotton accounted for 4,048,247 bales against 3,506,595 bales, and Egyptian for 559,320 against 569,776 bales.

The consumption of all growths of cotton in Great Britain for the past season equaled 3,890,300 bales against 4,230,626 bales. American represented 3,209,415 bales against 3,211,078 bales, and Egyptian 312,584 against 434,930 bales.

The total exports of all growths from Great Britain amounted to 619,040 bales against 437,414 bales. American accounted for 270,552 against 174,795 bales, and Egyptian 216,771 against 131,697 bales.

The stocks in the ports of Great Britain at the close of the season totaled 1,505,500 bales of all descriptions compared with 907,562 bales 12 months ago. Of this quantity 1,197,650 bales were American against 614,682 bales, and 95,087 bales Egyptian against 54,242 bales.

The stock of cotton held by spinners of all growths at the close of the season was estimated at 309,000 bales, against 317,000 bales; American accounted for, 200,000, against a similar number of bales 12 months ago; and Egyptian, 70,000 bales, against a like number last year.

The average price of "middling" American was \$0.1044 per pound, compared with \$0.1454 in 1913-14, and the average price of F. G. F. Egyptian was \$0.1468 per pound, against \$0.1890 in the previous season.

The world's spinners' takings of American cotton were figured at 13,891,000 bales, compared with 14,100,000 bales. The figures for Great Britain were 3,209,000 bales, against 3,116,000 bales; America, 6,231,000, against 5,700,000 bales; the Continent, 3,927,000, against 4,909,000 bales; Japan and Mexico, 524,000, against 375,000 bales.

The visible supply of all growths of cotton at the end of the season was given at 4,672,456 bales, against 3,176,816 bales in the previous season.

AMERICAN WATCHES AT ONTARIO EXHIBITION.

[Consul Felix S. S. Johnson, Kingston, Ontario, Canada, Sept. 7.]

The display of American watches at Ontario's National Exhibition is attracting much attention, especially the wrist watch. The breakage of crystals in wrist watches created a demand for a more serviceable case than the full open face. A new style, with protected crystal, fills this want. Should the crystal meet with a mishap, the broken glass may be ejected and the watch continued in service. As it is not always possible to obtain a crystal on short notice, this improvement is of considerable advantage.

A novelty on exhibition is a lady's watch set, that includes a bracelet, a chatelaine pin, and a fob, permitting the watch to be worn in any one of three ways.

EFFECT OF THE WAR ON SOUTH MANCHURIA.

[Consul General P. S. Heintzleman, Mukden, China, Aug. 16.]

This region being primarily agricultural the imports consist of such everyday necessities as cotton piece goods, cotton yarn and thread, kerosene, matches, leather, lamps and lamp ware, flour, soap, sugar, candles, etc. Of these, the United States shares to a noteworthy extent only in piece goods, kerosene, and flour. American leather and soap are imported in limited quantities.

In the limited importations of goods not absolute necessities the United States participates to a small extent. This offers a favorable field for extension, namely, agricultural implements, sewing machines, electrical materials and fittings, bicycles, condensed milk, canned goods, hardware, stoves, watches, underwear, and woollen goods. There is room for competition in the following goods if prices and terms are satisfactory (the consumption in some of these lines is not large at present, but the field is capable of extension): Leather goods, jewelry, machinery and fittings, boots and shoes, nails, screws, railway plant and material, knitting machinery, chemical products, ready-made clothing, enameled ware, ironware, gramophones and accessories, photographic materials, galvanized iron, roofing and flat sheets, tools, typewriters, and mining machinery.

Cotton Goods, Kerosene, and Matches.

The cotton-piece-goods trade of Manchuria had already practically fallen into the hands of Japanese prior to the present war. Important details on this trade in Manchuria, and a proposed plan by which American cotton manufacturers and others interested, such as bankers and steamship lines, should unite in forming a syndicate and establishing a distributing agency in Manchuria with a view to selling direct and not through Shanghai as formerly, were given in Confidential Bulletin No. 30, March 10, 1915, issued by the Bureau of Foreign and Domestic Commerce. An additional valuable discussion of this phase of American trade with Manchuria, prepared by the Embassy at Tokyo, appeared in **COMMERCE REPORTS** for March 10, 1915.

Cotton yarn continues coming from Japan and India, while cotton thread is chiefly furnished by England and Japan.

American kerosene has two rivals in the Sumatra and Russian products, but is maintaining its dominant position, representing about four-fifths of the imports in 1914.

Match factories, both Japanese and Chinese owned, have been established at Changchun and Kirin, and their products are, to a great extent, replacing the matches coming from Japan.

Leather, Lamps, and Flour.

During the past few years leather importations from the United States have been increasing, and as the war has cut off the European supply there is an increased demand for American leather. It is believed that if Americans would give this line their serious attention they would reap good results from any serious endeavors to extend sales here.

Lamps and lamp ware formerly came from Europe, and now that this source is cut off the trade is falling to Japan.

The war has affected to a certain extent the importation of American flour into this district. The importation decreased from 600,918

tons in 1913 to 67,544 tons in 1914. This falling off may be attributed principally to the higher prices demanded for the imported product, caused by the increased demand in the European markets and the enlarged output of the local mills. The importation of American flour was 25,000 tons, or a decrease of 37 per cent as compared with the previous year.

Soap, Sugar, and Gunny Bags.

Owing to the low prices at which Japan is able to supply soaps to this market, that country is gaining control of this trade. It is believed, however, that there are very good chances to sell cheap American soaps here if properly represented and well advertised.

Sugar is supplied by the mills in Formosa, Hongkong, and the mill at Ashiho, north Manchuria. Owing to the war, the prices of sugar have greatly risen. It is believed that with proper transportation facilities the Hawaiian product could, under present conditions, compete favorably with the above-mentioned sugars.

Gunny bags constitute a large item among the imports into this district. In 1913 they were imported into Manchuria to the extent of 8,977,756 pieces, while in 1914 the importation increased to 17,906,315 pieces, valued at about \$1,500,000 United States gold. These bags are essential in moving and exporting the immense grain crops of this region, and come chiefly from India.

Manchuria Entering an Era of Modernization.

Consequent upon the adoption by many Chinese of foreign dress and owing to climatic conditions, the winters being long and severe, there is reason to believe that the consumption of woollen goods will increase as the region is developed and the purchasing power of the natives enhances. The curtailment of supplies from Europe—Germany, Belgium, and the United Kingdom—is causing dealers to turn to the United States, and American manufacturers would do well to make a study of this market and its possibilities.

The development of the vast resources of Manchuria has been greatly handicapped by the difficult and complex political situation and the chaotic financial and currency conditions. However, just prior to the war, Manchuria seemed to be on the verge of entering a stage of marked advancement. Now that native conditions, following in the wake of the recent political events affecting Manchuria, are becoming more settled, it is anticipated that the whole of this region, under the direction of Japan, will soon enter an era of modernization which will in turn occasion the introduction of large amounts of manufactures and other goods necessary to carrying out this work, such as railway plant and materials, electrical materials and fittings, construction materials, telephone and telegraph supplies, agricultural implements, all kinds of hardware, glass, etc. With this gradual growth the standard of living and the purchasing power of the people will be increased, which should cause the introduction of better and more expensive grades of general merchandise.

Catalogues filed in the United States consulate at Johannesburg, South Africa, paved the way for a cable order for 250 cases of American sheet glass.

CANADIAN SKATE MARKET.

[Consul O. Gaylord Marsh, detailed as vice consul, Ottawa, Sept. 17.]

There are probably few if any places in the world where skating is more highly developed, as an art and a social feature, than in Ottawa. Skating here is more than a mere sport or recreation; it is raised to a position of considerable social importance and to be a graceful and artistic skater admits one to social functions from which he is otherwise barred. There exists therefore a particular incentive to become proficient as a skater and to possess skates of such quality as to meet social standards. The Canadians are well-known for their ability as hockey players and some American manufacturers have catered to this trade by manufacturing so-called Canadian hockey skates.

Social Skating Functions.

There are two ice rinks on the grounds of Rideau Hall, the official home of his royal highness, the Governor General, on which there are almost daily events during the skating season. The Governor General's Foot Guard Band plays at these social functions on Saturdays, when the guests engage in both plain and figure skating, including ice dancing. On Saturday afternoons admittance to the rinks is upon a somewhat general invitation to those registered at the government house; at other times attendance is upon special invitation.

There are numerous rivers and lakes about Ottawa, and in the city there are several open-air rinks and skating pavilions and arenas offering ample opportunity for social events, games, and recreation.

Large Sales of Skates.

From the foregoing it is apparent that this is a good market for high-class skates. One local dealer states that he sells as high as 6,000 pairs a year, ranging from \$1.50 to \$15. There is no market of value for clamp skates.

During the 12 months ended March 31, 1915, imports of skates of all kinds—roller or other and parts thereof—into Canada amounted to \$38,203, as compared with \$84,950 during the preceding fiscal year. The decrease resulted from general economic and war conditions. Of the imports for the last fiscal year, \$26,745 worth came from the United States, \$10,437 from Germany, \$530 from Great Britain, and \$491 from other countries. The importations from Germany were previous to the stoppage of trade immediately following the outbreak of war. Of the imports for the fiscal year 1914, \$40,719 worth came from the United States, \$42,886 from Germany, \$180 from Great Britain, and \$1,165 from other countries.

Canadian Manufactures.

Of the skates used in the past the Canadian product has been regarded as the best, the industry having been developed with a view to providing the quality and style demanded by the expert skaters and hockey players. The Canadian produced, electrically welded, tubular skate is regarded as the acme of perfection in this line. German skates have been popular for their quality, combined with cheapness in price. German manufacturers have shown a willingness to cater to the fancy of dealers by stamping special names on skates when requested and to modify the form of skates upon a showing of

advantage to be gained thereby. American skates do not bear a high reputation in this district, but are regarded as of rather unsatisfactory character due to rough finishing and poor tempering.

Canada has three skate factories of importance, one being the largest under the British flag. The possibility of war conditions diverging the operations of some of these factories and imports from enemy sources being interrupted, it would appear that American manufacturers of skates might find an increased demand for their products, particularly if they will offer a product of the high quality demanded by the local trade. Orders for the season of 1916-17 should be placed about January, 1916.

[For the information of those concerned the consul sent a list of Canadian skate dealers, which may be had from the Bureau of Foreign and Domestic Commerce. Refer to file 66348.]

HUNGARIAN TOBACCO MONOPOLY.

[Consul General William Coffin, Budapest, Aug. 18.]

In Hungary the production, manufacture, and sale of tobacco are controlled by the Government, the tobacco monopoly being an important source of revenue.

The duty per kilo (2.2046 pounds) on manufactured tobacco imported into Hungary is 1.25 crowns (\$0.25). This rate applies to all countries and is the same for chewing and smoking tobacco.

The total importation of tobacco in 1912 amounted to 49,000 double zentners (10,780,000 pounds), valued approximately at 15,000,000 crowns (\$3,024,193), and in 1913 to 67,000 double zentners (14,740,000 pounds), valued at about 17,000,000 crowns (\$34,272,177). No American tobacco was imported in 1913, and in 1912 the imports amounted to only 1,300 kilos (2,860 pounds).

Government License Necessary to Import—Cigar Most Popular.

There is no internal-revenue tax, as such, assessed on tobacco, but in order to import manufactured tobacco into Hungary a license must be obtained from the Government. In the petition for the license the amount to be imported must be stated and fees must be paid as follows: 35 crowns (\$7.10) for 1 kilo (2.2046 pounds) of cigars, 60 crowns (\$12.18) for 1 kilo of cigarettes, and 30 crowns (\$6.09) for 1 kilo of pipe tobacco. American tobacco is used in Hungary chiefly for pipes, less often in the form of cigars, and hardly ever as cigarettes.

Tobacco is used for smoking in Hungary, but rarely for chewing. The cigar is most popular; next comes the cigarette, and finally pipe tobacco. This last is cut in long narrow strips and packed in paper pouches and tin cans.

The Government has 22 tobacco factories in the country, which produced in 1913 goods valued at 172,000,000 crowns (\$34,677,418).

Under prevailing conditions it is not possible for private firms to manufacture tobacco in Hungary. American firms interested in supplying the unfinished product to the Hungarian Government should apply to its American agents, Kremelberg & Co., New York, and L. Borschers & Co., Richmond, Va.

[Additional information concerning contemplated importation of American tobacco may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65045.]

SOCIETY FOR PROMOTING BRITISH TRADE.

[Consul C. M. Hitch, Nottingham, England, Sept. 8.]

At a meeting of the Society for Promoting British Trade, held at the Nottingham Exchange on September 6, Mr. Chas. Marks, of London, the managing director of the society, delivered an address.

In explaining the plans and purposes of the organization, Mr. Marks said, that for many years there had been a great outcry against the German commercial invasion. On the Continent there was a big demand for British goods, but British travelers were so few that much business was lost. This society had been formed for the sole purpose of promoting British trade, and intended to run traveling exhibitions all over the world. These exhibitions would be open for 14 days in the capital of each country visited, and would then go on to other towns.

Ten people, including eight mechanics, would accompany each exhibition, but attached to it also would be the very best commercial travelers that money could get—men who had previously lived in those countries and who knew the language. The travelers would be paid \$50 or \$60 per week instead of \$15 or \$20 which they now receive.

While the exhibition is in a town or district, the travelers would call upon customers, bring them to the exhibition, and take orders, which would be forwarded twice a week to the manufacturer. Payment would be guaranteed by local banks for a small percentage, as only good firms would be dealt with. The travelers would be instructed to purchase samples of goods manufactured by Austria and Germany, and these would be shown privately at the society's rooms in London.

Having described at considerable length the plans for training commercial travelers, Mr. Marks said that at present if a manufacturer sent out a traveler it cost him from \$50 to \$100 per week, whereas under the scheme of the society he would only be called upon to pay \$35 per week, for which he would get the traveler, transport of samples, advertising, etc. The manufacturer would be required to sign a contract for 12 months, but at the end of the first 5 months he could terminate the contract by giving 1 month's notice. For the first three exhibitions, it was stated, the society could not represent more than 120 manufacturers, but later on, when larger halls were secured, from 1,000 to 1,500 manufacturers could be accommodated.

In answer to a question, Mr. Marks said that the first countries to be dealt with would be Norway, Sweden, and Denmark.

CONTRACT AWARDED FOR COTTAGE AT LOUISVILLE FISHERIES STATION.

Secretary of Commerce Redfield has approved the award of the contract for constructing a fish culturist's cottage at the fisheries station at Louisville, Ky., to Sanford Vaughn, jr., of Louisville, whose bid of \$2,600 was the lowest received. It is to be a one-story frame structure containing six rooms, bath, and cellar, with porch in front, and provided with modern improvements.

COTTON MILLS IN CHINA.

[Consul Clarence E. Gauss, detailed as vice consul in charge, Shanghai, Aug. 17.]

The following extract from the statement of the chairman of the Cotton Mill Owners' Association of China, made at the annual meeting of the association recently held in Shanghai, indicates concisely the views of the mill owners on the governmental measures needed to encourage the important and growing cotton-manufacturing industry in China:

Mill Owners Ask for Government Aid.

The second point is one which so far your committee have not taken up as energetically as they would like to do—perhaps the time is not yet ripe—but it is a subject which those persons having the industrial welfare of China at heart must sooner or later take up. Our ideas may be considered by some as drastic, but I would like to place them under five heads, as follows:

1. That the present excise on the products of cotton mills in China, amounting to 70 haikwan tael candareens (\$0.4284) per picul (about \$0.3212 per hundredweight)^a of yarn, 8 haikwan tael candareens (\$0.049) per piece of sheetings and 10 haikwan tael candareens (\$0.0612) per piece of drills, now collected by the customs, should be abolished forthwith.

2. That the products of cotton mills in China should be allowed access to all parts of China free of charge, likin, or other duty, provided they are accompanied by a pass to be issued by the customs, subject to a nominal payment being effected.

3. That the customs at port of destination refund all export duty on raw cotton, amounting to 35 haikwan tael candareens (\$0.2142) per picul (about \$0.1606 per hundredweight), shipped from any port in China and imported into another port in China.

4. That raw cotton exported from one port in China and imported into another port in China be exempt from import duty, amounting at present to 17½ haikwan tael candareens (\$0.1041) per picul (about \$0.0803 per hundredweight).

5. That raw cotton imported from foreign countries be exempt from import duty, amounting at present to 60 haikwan tael candareens (\$0.3672) per picul (about \$0.1377 per hundredweight).

The importance of fostering home industries, on the lines adopted in the United States and Japan, will doubtless appeal to all Chinese, so that the advantages to be gained by protecting the products of cotton mills in China from foreign competition need hardly be pointed out.

A glance at the following approximate estimates of spindles and looms driven by power in the three Eastern countries will show that there is ample room for vast additions being made to the supplies and looms in China, but it is not anticipated that there will be much impetus in the near future unless some encouragement is given to capitalists to develop the cotton industry of this country:

Countries.	Population.	Spindles.	Looms.
China.....	400,000,000	950,000	4,300
India.....	278,000,000	6,400,000	28,000
Japan.....	52,000,000	2,414,544	24,223

[The cotton-manufacturing industry in China has been exhaustively treated by Commercial Agent Ralph M. Odell, the cotton-goods expert of the Bureau of Foreign and Domestic Commerce, who has been investigating the field in China for some time, and whose comprehensive and valuable report on Cotton Goods in China is now in press. It will form one of the larger volumes of the Special Agents Series and may be obtained shortly from the Superintendent of Documents, Washington, D. C.]

^aUnited States Treasury valuation of haikwan tael for third quarter, 1915, \$0.612; 100 candareens=1 tael; 1 picul=133½ pounds.

HAT TRADE OF ANDALUSIA.

[Consul Wilbur T. Gracey, Seville, Spain, Aug. 9.]

Practically the entire hat trade of Seville is supplied by domestic manufacture. A local factory produces an excellent quality of felt hats of several types, one, commonly known abroad as a bullfighter's hat, having perhaps the greatest popularity, though its use is by no means confined to the bullfighting fraternity. This hat, which is round, has a wide brim and a tapering crown and is distinctive of this city, being used only in small numbers outside of Andalusia. The other shape sold here is the "fedora." A few "derbies" are seen in the winter months, and beavers of two kinds, those commonly worn in America and Europe and known as "top hats" and a special shape manufactured for the Catholic clergy.

A local dealer estimates that not more than 10 per cent of the hats sold here originate abroad, the largest number of these coming from one well-known Italian firm. English hats are handled by one firm, and British-made caps are seen in large numbers in most of the men's furnishing and hat stores. A curious condition in the hat trade here is that caps are used only by the poorer classes, and the middle class and wealthier people never wear them.

Customary Styles—Prices.

Straw hats of the usual round shape and straw fedoras are on sale, but novelty shapes, such as rounded crowns, square blocked, Leg-horns, Bangkoks, etc., are never seen, and there appears to be a possibility of their sale here, especially for those of very light weight, owing to the long, hot summer. The thermometer at times registers 115° or 118° in the shade and 135° to 140° in the sun.

Panama hats are seen, but are not largely sold. They range in price from \$6 to \$10 or higher. Straw hats of the usual types cost from \$1 up, fedora shapes being slightly more expensive. Felt hats cost from \$1.50 up, a good quality being obtainable for \$2 to \$2.50. British-made felt hats are sold at \$3 and \$4. The Italian hats cost \$2.10 to \$2.20 c. i. f. Seville. Locally manufactured silk top hats cost \$3.50 to \$4. The local "bull-fighting" shape costs \$1 to \$1.60, and comes in gray, light gray, white, brown, and black.

The felt hats come mostly in gray and black, though green and tobacco-colored hats are also used to a certain extent. Hats are usually supplied with a plain ribbon band having the bow either on the side or at the back. Straw hats are also supplied with a mourning band of crape placed on the hat under the regular band and reaching to the top of the crown.

Import Duty—Terms—Sales Methods.

The only statistics available show that in the year 1914 the importation of "hats and accessories therefor" amounted to 4,609 pounds in weight, no values being given. The import duty on hats is as follows: Straw hats, 14 pesetas per kilo (\$1.23 per pound); hats of other material, untrimmed, 2.50 pesetas (\$0.48) each; women's hats, trimmed, 7 pesetas (\$1.35) each.

Hat dealers here usually do business on terms of 30 to 60 days, though in some cases 90 to 120 days are asked for and allowed. Packing and pasteboard boxes are usually not included in the price of the hats, but are at the expense of the purchaser.

Most of the sales of foreign goods made here are placed through traveling salesmen, who call on the local dealers with a supply of samples and take orders, and it seems probable that this is about the only successful way to do business in this line, though it is possible that some trade might be built up if a line of samples were sent to some local dealer.

Spanish Language Should be Used—Advertising Campaign.

All correspondence and catalogues and other literature should be in the Spanish language, as the dealers here are not familiar with English, and if prices are quoted gold pesetas (1 gold peseta equaling 19.3 cents) it will be more satisfactory to local dealers, who receive quotations from European firms in francs, the equivalent of gold pesetas.

It is suggested that in order to introduce American-made hats an advertising campaign might be advisable through the medium of the local daily, weekly, and monthly papers and magazines, theater curtains, billboards, lantern slides, etc., and that the manufacturer might allow dealers a certain amount for this purpose in order to aid in introducing and popularizing his goods.

[A list of Seville dealers in hats may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices by referring to file No. 65806.]

NEW SOUTH WALES IMPORTS.

[Consul General J. I. Brittain, Sydney, Australia, Aug. 12.]

Recently published statistics show the imports into New South Wales for the year ended June 30, 1915, as follows:

Month.	1913-14	1914-15
July.....	\$14,100,007	\$15,984,958
August.....	12,946,345	14,206,024
September.....	14,991,214	10,161,286
October.....	12,839,233	10,718,850
November.....	11,815,487	10,944,159
December.....	15,671,541	10,441,825
January.....	12,156,040	11,489,227
February.....	12,219,163	10,283,146
March.....	17,701,348	11,240,091
April.....	11,964,353	9,633,777
May.....	14,713,789	7,985,089
June.....	11,992,515	10,350,855

The decrease, \$29,578,587, covers largely imports during the second half of the year. The falling off in dry goods alone was \$3,893,200.

The decrease is also noticeable in metal goods, machinery, and various miscellaneous articles.

The exports for the year ended June 30, 1914, amounted to \$173,216,390 and for the year 1915, \$138,415,294, showing a decrease of \$34,801,096. The decrease in exports was mostly previous to January, 1915, but since that time there has been a general recovery in the export business in spite of the great shortage in the harvest, which interfered with the export of grain, meat, and dairy products.

Recent rains over the Australian wheat areas have broken the long distressing drought and good crops are anticipated next season.

NEW GRAIN ELEVATOR FOR MANCHESTER DOCKS.

[Consul Ross E. Holaday, Manchester, England, Aug. 30.]

The Manchester Ship Canal Co. has just announced that it expects to begin placing grain in the new elevator (No. 2) on or about September 7 although the building will not be fully equipped with machinery until some weeks later.

The charges payable by merchants will be as set forth in the grain schedule issued in March, 1915, in respect of the No. 1 elevator, with the exception that the rent payable for the storage of grain will be 1 cent per ton (2,240 pounds) per week more. [A copy of the March, 1915, schedule referred to may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices; ask for file No. 65865.] As the new elevator is of ferroconcrete construction the insurance companies have agreed to accept the fire risk on grain stored in the elevator at a premium of 61 cents per \$486.65 per annum.

The charges payable by shipowners are fixed at 19 cents per long ton on wheat and maize and 22 cents on oats for discharging bulk grain by means of portable elevators.

New Granary Needed to Cope with Trade.

In the early days of the Ship Canal (it was opened in 1894) there was very little trade in grain, probably owing to the fact that no special facilities were provided for handling, the grain being inconveniently dealt with in the quay transit sheds. The possibilities of increasing this trade, however, were soon realized by the Ship Canal Co.; the No. 1 grain elevator was erected, and in a very short time the trade in grain greatly increased. Following this, developments took place in other directions, several large flour mills being erected alongside the canal, one or two of these mills taking in as much as 50,000 tons of grain per annum.

In order to cope with this ever-growing trade (the total import of grain to Manchester now exceeding 600,000 tons per annum) it has been found necessary to double the elevator accommodation, and now that the new elevator is ready Manchester is placed in the very forefront as a grain entrepôt. The new granary has a holding capacity of 40,000 tons (1,500,000 bushels) and is capable of handling grain at the rate of 1,200 tons per hour. It is a reinforced concrete building, with steel window frames and doors, comprising 260 storage bins and 81 shipping bins, as well as distributing, weighing, and loading-out floors, machinery for cleaning the grain, etc. The structure is 160 feet high, 295 feet long, and 165 feet wide.

Equipment Modern Throughout.

The building is equipped with six receiving elevators and six discharging or shipping elevators, each of these being provided with an automatic scale capable of weighing 200 tons of grain per hour. There are also automatic scales for weighing and sacking, machinery for loading into carts or railway wagons, and for discharging bulk grain or sacks into coasting vessels or barges, and plant for cooling grain.

This latest addition to the equipment of the port of Manchester is built at the east end of No. 9 dock, not the least interesting feature of which is its subways in which run band conveyers. These are so

arranged that during the time general cargo is being dealt with, portable elevators will be used for discharging the various parcels of grain from the vessel on to the band conveyers in the subway or overside to barges.

Of the subways on the south side of the dock the two berths nearest the canal are each fitted with two conveyers; the remaining three berths are provided with three conveyers each. On the north side of the dock one berth has two conveyers and the other three, these berths being intended primarily for the discharge of full cargoes of grain arriving in bulk. If it is desired to discharge overside into barges for transshipment to Manchester mills or along the smaller (barge) canals to inland mills, the portable elevators and conveyers will again be used.

Sacked Grain—Connecting Railway Lines.

In addition to the facilities for receiving and storing grain in bulk, there is excellent accommodation at the Manchester Docks for the storage of Indian grain, which is not dealt with in bulk but is delivered to the millers in original bags. This grain is accommodated in the spacious warehouses at the docks.

In connection with the handling of grain at Manchester it should be mentioned that the facilities at the docks for distribution by rail, cart, motor vehicle, and inland canals are most excellent. The dock railways are 85 miles in extent; the total length of railways already completed at the docks and at many points alongside the ship canal is upward of 140 miles. The following railways connect with the docks: London & North Western, Lancashire & Yorkshire, Midland, Great Northern, Great Central, Cheshire lines.

NEW COTTON MILL FOR INDIA.

[Consul Lucien Memminger, Madras, Aug. 3.]

A new cotton mill, with 2,500 spindles and 500 looms, with an estimated annual outturn of 1,425 long tons of yarn and 800 long tons of cotton cloth, is to be established at Bangalore, in the Native State of Mysore, southern India. The capital required to run the mill is about \$519,000.

There are at present two cotton mills in Bangalore, and the subject of starting another mill has been under consideration by the Government for the past two years. It was at first planned to establish the mill at Devangere or Harihar, but subsequent inquiries proved that Bangalore was the most suitable place. The electric energy available at Bangalore offers a convenient source of power, and facilities for obtaining labor are considered greater there than elsewhere in Mysore. In regard to the question whether there is room for an additional cotton mill in the State the report prepared by the Director of Industries and Commerce is in the affirmative.

Cotton mills in southern India are generally continuing to operate. There are 20 mills in Madras Presidency and Mysore, 3 in the State of Hyderabad, and 3 in the French colony of Pondicherry. The Madras mills sell largely to Burma and also at present have extensive Government orders for textiles.

THE LUMBER INDUSTRY IN ECUADOR.

[Prepared in consulate at Guayaquil, Aug. 7.]

Ecuador has a timber area of about 90,000 square miles, 10,000 of which are on the west slope of the Andes and below the 5,000-foot elevation. The total area of the Republic has been estimated at 116,000 square miles—equal to the combined area of the States of New York, Pennsylvania, New Jersey, Connecticut, Massachusetts, and New Hampshire.

As in other tropical forests, timber is seldom found in vast tracts of a single species, the only exceptions being the figueroa forests of Esmeraldas and the roble district of Taura, which undoubtedly are the most accessible and offer the most favorable opportunities for exploitation. While the Province of Guayas is drained by the extensive system of the Guayas River, most of the land bordering on that system has already been cleared and planted with cacao, the cultivation of which forms the chief industry of the country.

Of the two dozen sawmills in the Republic, 11 are located in Guayaquil or vicinity, three in Esmeraldas, and the remainder in various other parts of the country. No records have been kept of the production of lumber, and it is impossible to make even an approximate estimate.

Introduction of Improved Methods.

Until within a few years the lumber business was carried on in a most primitive manner; the logs, after being roughly squared, were sawed by hand and sold to the public per board. There was no uniformity in the price, each individual piece was bargained for, and large quantities were sold by the lot.

However, with the advent of the sawmill the board-measure system was introduced. Each board is now measured at the mill and the total number of square feet marked on it.

The dry kiln is still unknown in Ecuador, although greatly needed. During the construction season—May to December—it is possible to secure dry lumber for furniture only by paying excessive prices.

This progress in methods unfortunately applies only to the districts of Guayaquil and Esmeraldas. In Quito, Ambato, Riobamba, and Cuenca the antiquated methods of cutting and transporting lumber are still in operation, the trails over which it is brought being so difficult that one seldom sees boards more than 7 feet long in the markets of the interior towns.

Kind of Machinery Used.

The vertical gang saw manufactured in England is much preferred to any other kind, the American circular saws being used only for sawing mangle and for squaring off two sides of the logs before running them through the gang saw.

Planing and other small machines are chiefly from the United States, although quite a few German ones are seen, this fact being due, probably, to the long credits extended by the local German machinery dealers.

Exports and Imports—Prices.

It has been suggested that, in case the lumber industry should be conducted on a larger scale, the best way would be to clear the

timberlands (selling the soft woods for local consumption) and to accumulate the hard varieties until a sufficient quantity were gathered to make export profitable, planting the land thus cleared with cacao or rubber trees.

Little lumber is exported. A few sample shipments of balsa wood and some of the hard woods have been sent to the United States, but no trade has developed. Bamboo is shipped in large quantities to Peru and Chile.

Owing to repeated fires, some of which swept nearly the whole city, the use of pine and other resinous lumber was prohibited in Guayaquil. Since this prohibition went into effect very little foreign lumber has been imported into Ecuador. The railroads import pine for use in the construction of box cars, station buildings, bridges, etc. During 1912 about 200 tons of lumber were imported, 75 per cent coming from the United States.

The average price per 1,000 feet of the common lumber, such as roble, laurel, suche, figueroa, etc., in Guayaquil is from \$40 to \$50 in United States gold. Guayacan, madera negra, and other good hardwoods are sold for about \$5 a log—the log averaging about 12 inches in diameter and about 12 feet in length.

While not sold by board measure, canelo, chigmay, laurel, and aliso can be purchased in the interior cities at prices that would average from \$45 to \$65.

One large company, operating in the southern part of Ecuador, purchases its lumber standing, contracting for the felling and transportation to the plant.

[Consul General Godling transmitted with this report a list of the principal woods found in the littoral and Andean plateau regions of Ecuador, with a brief description of the characteristics of each. This list will be loaned to interested persons by the Bureau of Foreign and Domestic Commerce. Refer to file No. 65395.]

NEW FEEDING STUFFS AT BRISTOL.

[Consul J. S. Armstrong, jr., Bristol, England, Aug. 18.]

The importation of oilseeds is an important industry at Bristol. A report on this trade was published in *COMMERCE REPORTS* for April 20, 1915.

An item has recently appeared in the Bristol Times and Mirror calling the attention of local seed crushers to the possibilities the use of palm kernels offers. Before the war Bristol merchants made an energetic effort to secure a share of this business and limited supplies were obtained from West Africa, but because freights were 10s. (\$2.43) per ton higher to Avonmouth (Bristol) than to Liverpool any substantial development of this industry was found impracticable. It is now suggested that interested merchants should make representations to steamship owners with a view to bringing about a freight rate as low as that offered to Liverpool.

Groundnuts, which have been crushed in large quantities on the Continent, have been offered to Bristol Channel importers on equal terms with Liverpool, Hull, or London, and oilseed crushers in this district are now turning their attention to this product. Several cargoes of groundnuts have already arrived at this port.

RECEIPTS OF FISH AT NEW ENGLAND PORTS.

The American fleet landing fish at Boston and Gloucester, Mass., and Portland, Me., during the month of August comprised 306 steam and sail vessels. At Boston 400 trips were landed, aggregating 10,104,583 pounds of fresh and salted fish, valued at \$296,232; at Gloucester 200 were landed, aggregating 8,467,612 pounds of fresh and salted fish, valued at \$185,530; and at Portland 57 trips were landed, amounting to 1,296,346 pounds, valued at \$22,001; a total for the three ports of 19,868,541 pounds, valued at \$503,763.

A feature of the fisheries during the month was a remarkable abundance of small mackerel along the coast of Massachusetts. Many trips of these fish were taken by small vessels from the mouths of harbors and on the inshore banks, and on several occasions a number of vessels caught and landed two trips in one day. On August 31, the schooner *James W. Parker* landed at Gloucester, Mass., 202,000 pounds of fresh "ground" fish. The trip was caught on Le Have Bank, and was reported to be the largest catch of fresh fish of the season taken by a line trawler. The amount of swordfish caught during the month was 598,317 pounds, valued at \$57,131.

The otter-trawl steamers *Long Island* and *East Hampton*, which for several months have been fishing out of Portland, Me., have been transferred to Boston.

The figures for the three ports in kinds of fish are:

Kinds of fish.	Boston.		Gloucester.		Portland.	
	Pounds.	Value.	Pounds.	Value.	Pounds.	Value.
Cod	2,148,982	\$71,781	2,769,142	\$66,190	61,596	\$1,006
Haddock	4,316,173	69,896	2,484,212	25,348	846,791	10,622
Hake	606,410	14,164	1,125,300	14,038	87,421	1,216
Pollock	671,647	18,393	103,185	1,259	3,539	54
Cusk	91,705	1,654	413,650	5,976	3,783	94
Halibut	101,307	11,501	280,060	20,777	71,921	6,061
Mackerel	1,343,800	47,671	1,045,453	49,592	7,600	136
Miscellaneous	824,559	61,267	244,620	2,050	213,605	2,788
Total	10,104,583	296,232	8,467,612	185,530	1,296,346	22,001

ACCLIMATIZATION OF HUMPBACK SALMON.

In the fall of 1913 the Bureau of Fisheries transferred from the Pacific coast to Maine 13,240,000 humpback salmon eggs, and in the fall of 1914 a second shipment of 7,022,000 eggs was forwarded. These eggs were developed at the Green Lake and Craig Brook hatcheries, and the resulting fry were planted in various selected streams where the conditions seemed favorable.

Reports have been received indicating the survival of some of the early plants and the possibility of the establishment of a run. Early in August, 1915, a female humpback salmon 22½ inches long and weighing 4 pounds 3 ounces was taken at Bangor waterworks in the Penobscot. A little later a male fish of about the same size was taken in this river at Orland Dam.

It is the intention of the bureau to continue the planting of humpback salmon fry and fingerlings in Maine waters, and arrangements have been made to ship about 7,000,000 eggs of that species to the stations above referred to during the fall of 1915.

THE RAILWAYS OF JAPAN.

[Vice Consul Harold C. Huggins, Yokohama, July 20.]

The railway system of Japan is practically a Government monopoly, only 265.58 miles of railway being privately owned on March 31, 1915 (the latest date for which statistics are available), out of a total mileage of 5,944. The Government railway mileage for the past three fiscal years (ended Mar. 31) is given as follows: 1912-13, 5,217.16 miles; 1913-14, 5,471.12 miles; 1914-15, 5,678.42 miles.

It is reported that the Imperial Government Railway Bureau has planned to construct 80 miles and 52 chains of new lines in the fiscal year 1915-16, at an estimated cost of 8,453,859 yen (\$4,200,022). A further amount of 10,899,317 yen (\$5,427,859) has been allowed for improvements during the same period—these contemplated improvements consisting of necessary changes in present trackage and construction of double tracks. The Government has also allowed the sum of 250,000 yen (\$124,500) for subsidies to encourage the building of light railways.

Extension of Government Lines—Yokohama-Tokyo Electric Line.

The Government lines are slowly being extended to tap all portions of the country where industry, agriculture, manufacturing, forestry, and mining are so far advanced as to require a ready means of transportation to the central markets. It is intended to construct on an average about 200 miles of new lines a year until such time as the country will no longer require any great extension of the existing system. The final plans for the construction of a line from Tokyo to Kobe, cutting off the haul over the Hakone Mountains by boring a tunnel through the mountains near Atami, were adopted during 1914. The estimates of construction provide for the completion of the line within 10 years. The designation of this long period is entirely due to the lack of funds available for construction work. This line when completed will effect a substantial saving in operation expenses in the haul from Tokyo to the south of Japan. It is intended to use electric power for hauling through the tunnel.

The year 1914 witnessed the completion of the long-expected electric line between Yokohama and Tokyo. Unfortunately, the engineer having the work in charge decided to alter the plans submitted by the foreign experts called into consultation, hoping thereby to effect a saving in the cost of the line. The overhead wire for carrying the current was, in the original plan, to have been welded to the supporting carrier. The plan adopted provided for the support of the current carrier by means of a hook not closed. As a result, when the line was opened the passage of a train would elevate the wires so that they slipped off the hooks. The consequent confusion tied up the line for more than four months. The line is now (July, 1915) in operation and is proving very successful.

During the year the Railway Bureau stopped the use of first-class coaches on many lines and trains where they were found to be little used. A consequent increase was recorded in the efficiency of the second and third class services to which these first-class coaches were transferred.

Receipts and Disbursements.

It is estimated by the Government Railway Bureau that the receipts from the service during 1914 were as follows: Passenger, \$27,819,535; freight, \$27,195,093; total, \$55,014,628. The receipts for the fiscal years 1911-12, 1912-13, and 1913-14 are given as:

Classes of receipts.	1911-12	1912-13	1913-14
Passenger.....	\$25,235,781	\$27,044,394	\$27,875,720
Freight.....	22,746,496	24,590,081	26,577,729
Shipping (receipts for Government-owned ferry lines, steamship lines, etc.).....	1,045,451	1,066,138	1,115,940
Total.....	49,027,727	52,700,613	55,569,389

The disbursements of the Imperial Government Railways for the same fiscal years are itemized below (data for 1914-15 not available):

Expenses.	1911-12	1912-13	1913-14
Construction.....	\$9,941,815	\$14,060,102	\$9,305,743
Improvement.....	14,559,933	15,446,847	11,250,521
Maintenance.....	5,054,042	5,663,648	6,237,094
Traffic.....	15,320,903	13,698,544	14,876,011
General (maintenance of equipment, hotels, etc.).....	2,413,647	5,554,705	6,003,416
Other.....	917,865	1,026,250	1,303,451
Total.....	48,212,205	55,440,096	49,026,241

Capital Invested—Equipment.

The capital invested in the Government railways, covered by loan bonds and by appropriations in the annual budgets, for the past three fiscal years (not including 1914-15), is reported by the Imperial Bureau of Railways as follows: 1911-12, \$434,370,540; 1912-13, \$464,470,298; 1913-14, \$484,599,565.

Statistics showing the equipment of the Government railways for the fiscal year ended March 31, 1915, are not available, but data for the three preceding fiscal years are given below:

Equipment.	1911-12	1912-13	1913-14
Stations..... number..	1,389	1,441	1,529
Locomotives..... do..	2,306	2,381	2,499
Passenger carriages..... do..	6,893	6,148	6,453
Freight cars:			
Covered..... do..	16,591	18,422	19,726
Open..... do..	21,961	22,105	42,705
Loading capacity of freight cars..... tons..	292,498	332,318	365,315

The passenger and freight cars in use on the Government railways are now, in large part, being built by the Government railway shops at Tokyo, Osaka, and Omiya, near Tokyo. There are now 24 of these shops, employing 14,664 operatives, with an average daily wage of \$0.359 per day. This wage has slightly decreased during the past two years.

Statistics of Passenger and Freight Traffic.

Some significant figures with respect to passenger and freight traffic on the Government railways are contained in the following table:

Items.	1911-12	1912-13	1913-14
PASSENGERS.			
Total passengers carried.....	151,077,779	160,711,737	167,773,142
Passengers per day per mile.....	1,837	1,954	1,909
Passengers carried 1 mile.....	2,382,586,411	2,626,316,499	2,690,964,619
Earnings per mile per passenger.....	\$0.00695	\$0.00699	\$0.00695
Earnings per mile per day.....	\$14.079	\$14.572	\$14.417
FREIGHT.			
Total goods hauled.....tons	29,337,064	32,537,345	36,348,362
Goods hauled 1 mile.....do.....	2,347,871,475	2,691,464,174	3,053,852,638
Receipts per ton per mile.....	\$0.0083	\$0.00915	\$0.0087
Receipts per day per mile.....	\$12.565	\$13.147	\$13.626

In 1914 the number of employees of the Imperial Government Railway Bureau was 112,087. In 1913 it was 109,983 and in 1912 103,418.

Of the total track mileage in 1914, 5,117.6 miles were equipped with modern safety appliances, such as block-signal system, etc.

NEW RICE INDUSTRY IN PORTO RICO.

[Harwood Hull, correspondent, San Juan, Sept. 15.]

Experiments in lowland rice culture recently started here are arousing much interest because rice is the chief food consumed in the island. Porto Rico has spent approximately \$5,000,000 annually during the past four years for this grain and is the largest export consumer of American-grown rice.

A 100-acre plat near Canovanas recently was prepared for rice cultivation and various portions of it have been planted at intervals of one month since. The first crop is now about to be harvested and it is estimated that it will yield 2 tons or more of cleaned rice to the acre. Persons who have seen rice grown in Japan, Hawaii, and in the United States assert they have never seen better crop prospects.

The land which has been planted is low and level, easily irrigated, and was considered too wet for sugar-cane cultivation. It is said to be typical of large tracts of land in various sections of the island which are not now cultivated and which have been considered as useless.

Those interested in the experiments say it will require several seasons to determine definitely just what can be done with rice here, but they are sufficiently impressed with the possibilities of the industry to have ordered machinery for harvesting and cleaning the grain ready for market. They expect to get two crops a year from the same land. It takes three to four months for the crop to be harvested after planting.

Many natives throughout the island plant hill rice and raise sufficient quantities for their own use, but this rice has never been marketed.

Besides small quantities of rice imported from foreign countries each year, Porto Rico has purchased rice from the United States since 1910, as follows:

Year.	Pounds.	Value.	Year.	Pounds.	Value.
1910.....	117,527,269	\$3,747,215	1913.....	128,718,090	\$5,069,527
1911.....	120,901,196	3,866,986	1914.....	130,836,581	5,306,364
1912.....	134,648,403	4,891,747	1915.....	127,310,116	4,551,533

ANDALUSIAN RAILWAY REPORTS PRESENTED.

[Consul Wilbur T. Gracey, Seville, Spain, Aug. 24.]

A report, published in **COMMERCE REPORTS** of July 12, dealt with railways operating in the Seville consular district, and covered several of the most important lines. Facts regarding the other lines now in operation have been secured by the consul directly from the companies operating them. These companies are:

Andalusian Railway Co. (Compania de Ferrocarriles Andaluces). Head office, No. 12 Paseo de Recoletos 12, Madrid; directors' office, Paseo de Peding, Malaga. This company is, perhaps, the most important line in this district, as it operates from Seville to Bobadilla, and Algeciras; Cordoba to Malaga; Bobadilla to Granada; Puente Genil to Linares; Cordoba to Belmez; Marchena to Valchillon; Seville to Jerez de la Frontera and Cadiz; Utrera to Moron and Osuna; Osuna to La Roda; Jerez de la Frontera to San Luca and Bonanza, and Alicante to Murcia and Terrevieja. Its purchases of material are made by a committee of the company located at 4 Rue de Rome, Paris, France, usually by tenders, no particular preference being given for goods from any one country.

Construction Works—Equipment—Traffic Record.

The repairing and construction works are at Malaga, and about 465 workmen are employed. On June 1, 1915, the actual rolling stock consisted of 197 locomotives, 605 passenger cars, and 5,176 freight cars, almost all built either in France or Belgium. The total length of lines is 1,261 kilometers in operation (784 miles) and 7 kilometers (4 miles) under construction.

The capital of the company is 45,500,000 pesetas (\$8,781,500), with 91,000 shares. On June 1, 1915, the total number of employees was 6,800.

The rails weigh from 30 to 40 kilos per meter (20 to 27 pounds per foot), and while formerly secured from various countries, for some years they have been purchased exclusively in Spain. The ties in use are from Spanish and French sources.

The total number of passengers carried in 1913 was 3,891,718, and 4,147,068 in 1914. The large increase in the last year was largely due to the fact that the line from Bobadilla to Algeciras was taken over by this company in 1914 from an English company.

The receipts in 1913 were \$5,778,216; the expenditures \$3,017,485; in 1914 the receipts were \$5,696,218 and payments \$3,086,071, the dividends each year being \$2.41 per share.

Seville, Alcala & Carmona Railway.

This line, built principally for passenger traffic, has its head office in the Enramadilla Station, Seville. It is a short line 43 kilometers (27 miles) in length, 14 kilometers of which were opened in 1873 and the balance in 1880.

The purchase of materials is in the hands of the "jefe de la explotacion," and they are secured from the cheapest sources. The workshops are at Seville, and about 14 workmen are employed. The locomotives were purchased in Grafenstaden, and the cars from England, Belgium, and France.

The company employs 123 men, and has a capital of \$386,000, with 4,000 shares.

The rails weigh 32.5 kilos per meter and are secured from Bilbao; the ties are of Spanish pine creosoted.

The line carried 146,633 passengers in 1913 and 156,119 in 1914, and transported during the former year 48,896,121 pounds of freight and in the latter 55,378,410 pounds.

In 1913 the receipts were \$72,194 and expenses \$67,266, while in 1914 the receipts were \$85,908 and the expenses \$67,188. No dividends were paid during these years.

Rio Tinto-Huelva Railway.

This line, the property of the Rio Tinto copper mines, has its headquarters at the mining company's offices, 3 Lombard Street, London, England, where all materials not secured in Spain are purchased. They are ordered as desired, with no fixed times, and are paid for in cash upon delivery, the preference in the matter of machinery being given to foreign manufacturers rather than Spanish. The workshops are located at Huelva and employ about 800 persons.

The line has 50 passenger coaches, 150 locomotives, 5,000 freight cars (principally for the transportation of minerals), and 42 closed freight cars. Modern machinery is used in its workshops. The road has a gauge of 3 feet 6 inches and a total length of 53 miles.

The rails are 65 pounds in weight and of Spanish manufacture; ties measure 6 feet long, 9 inches broad, and 6 inches high, and are of Spanish pine. The railway has a branch line from Rio Tinto to Nerva, 1.2 miles, and another from Rio Tinto to Zalamea, 6.2 miles. During a normal year about 2,500,000 tons of cargo are carried, principally minerals. The railway works in connection with the mines, and no separate dividends are declared.

Tharsis-Huelva Railway.

This line, owned by the Tharsis Sulphur & Copper Co., whose headquarters are 136 West George Street, Glasgow, Scotland, runs from Huelva to the Tharsis mines, a distance of 29 miles. Materials are purchased largely through the Glasgow office. Goods purchased in Spain are secured by yearly contracts on open tenders. The rails are of Spanish manufacture, but most of the machinery and rolling stock is from abroad.

The line has a gauge of 1.20 meters (3.93 feet) and, in addition to the main line of 46 kilometers (29 miles) open to public traffic, has a branch to the Zarza mine, 30 kilometers (19 miles), used for the transportation of minerals.

No details are obtainable relative to the rolling stock, but it may be estimated at one-fifth that of the Rio Tinto Co.

Huelva-Zafra Railway.

This line has its chief offices at Barquillo 5, Madrid. Purchases are made partially by annual contract and the remainder, as required, by direct purchase. The workshops are at Huelva, and approximately 200 men are employed.

The company has 90 passenger coaches, 18 wagons, and 610 freight cars. The road has 180 kilometers (112 miles) in operation. Its capital is \$19,466,000, it employs 978 men, and carried 229,222 passengers in 1913 (the last year for which statistics are available) and 681,945 tons of cargo. The company does not contemplate purchasing new material at present.

OFFICIAL NUMBERS FOR MERCHANT VESSELS.

The following is a statement of official numbers and signal letters designated to merchant vessels by the Bureau of Navigation, Department of Commerce, during the two weeks ended September 18, 1915:

Official number.	Name.	Signal letters.	Tonnage.		Year built.	Where built.	Home port.

^a Foreign-built vessels admitted to American registry under the act of Aug. 18, 1914. Total admitted since June 30, 1915, 15 vessels, 42,151 gross tons.

^b Formerly Norwegian steam screw Lapland.

^c Formerly Greek steam screw Spyros Vallianos.

The Yokohama Economic Association is considering the establishment of a large timber depot near Yokohama; also of a shell-button factory.

CHILEAN MARKET FOR TOBACCO.

[Consul General L. J. Keena, Valparaiso, July 20.]

Chilean manufacture of tobacco (using principally native raw material) has increased very rapidly in recent years. In 1913 there were in Chile 192 tobacco factories, 59 of which were in Valparaiso and 61 in Santiago. One hundred and twenty-nine of these were under Chilean ownership and 63 were the property of foreigners.

Raw material used by them to the amount of \$435,656 in United States currency was raised in this country, and an additional \$65,405 worth was imported. The imported raw material includes cigarette paper. The total value of the production of these factories for the year was \$3,338,807. One thousand nine hundred and sixty persons were employed in the manufacture of tobacco in 1913.

The motive power used in these factories is stated as follows: One steam, 6 horsepower; 9 gas, 92 horsepower; 1 hydraulic, 20 horsepower; 50 electric, 230 horsepower; 2 kerosene, 7 horsepower. It is understood that the term factory as used in this connection includes even shops employing only a small number of workmen.

The product of these factories is almost exclusively cigarettes. Cheap varieties of cigars are also made and a small amount of leaf cuttings is put up in packages for pipe smoking.

Statistics of Imports.

The size of the import market for leaf tobacco and manufactures of tobacco may be judged from the following statistics for 1913:

Countries.	Cigarettes.		Cigars.		Leaf tobacco.		Cut tobacco.	
	Pounds.	Value.	Pounds.	Value.	Pounds.	Value.	Pounds.	Value.
Algers.....	2, 789	\$5, 541						
Argentina.....	159	315	11	\$18	2, 185	\$1, 065		
Austria-Hungary.....	123	245					220	\$128

Customs and Internal-Revenue Duties.

Customs duties on tobacco are:

Cigarettes.—Including weight of the container, with the exception of the cases or boxes of wood and metal, 9 gold pesos (\$3.29) for each kilo on a valuation of 12 gold pesos (\$4.38) per kilo of 2.2046 pounds.

Cigars.—Six gold pesos (\$2.19) for each kilo (net weight) on a valuation of 10 gold pesos (\$3.65) per kilo.

Snuff.—Five gold pesos (\$1.33) for each kilo on a valuation of 5 gold pesos (\$1.33) per kilo.

Tobacco (leaf).—2.60 gold pesos (\$0.95) for each kilo on a valuation of 3 gold pesos (\$1.10) per kilo.

Tobacco (cut).—Four gold pesos (\$1.46) for each kilo on a valuation of 3.50 gold pesos (\$1.28) per kilo.

All merchandise paying a specific duty adds 10 per cent, except sugar and flour.

Internal-revenue duties (law of 1913) are:

Cigars.—Imported and sold in sealed boxes: One peso (\$0.16) for each 25 cigars or fraction thereof.

Imported: Ten centavos (\$0.016) each one.

Manufactured in Chile: Five centavos (\$0.008) each one.

Little, in boxes or packages: Two centavos (\$0.0032) each one.

Cigarettes.—Imported in packages: Ten centavos (\$0.016) each package.

Manufactured in Chile: Five centavos (\$0.008) each package.

Tobacco (cut).—Five centavos (\$0.008) for each package of 25 grams (0.88175 ounces avoirdupois).

It is understood that packages are not to contain more than 14 cigarettes nor to exceed 25 grams (0.88175 ounces avoirdupois) in weight. Fractions in excess pay as full value.

It is prohibited to sell cigarettes without stamps corresponding to contents. It is prohibited to sell cigarettes loose or in bulk.

English and American Pipe Tobaccos.

The local market presents a large assortment of pipe tobaccos, cigarettes, and cigars of foreign manufacture.

The pipe tobaccos are principally English. Some of the brands on sale, with retail prices in United States currency, are: English—Capstan, \$0.65 per $\frac{1}{2}$ -pound tin; Black Cat, \$0.75 per $\frac{1}{2}$ -pound tin; Craven Mixture, \$1 per $\frac{1}{2}$ -pound tin; John Cotton, \$1 per $\frac{1}{2}$ -pound tin; Glasgow Mixture, \$1 per $\frac{1}{2}$ -pound tin; Players Mixture, \$0.70 per $\frac{1}{2}$ -pound tin. American—Old English (curve cut), \$0.75 per $\frac{1}{2}$ -pound tin; Bull Durham, \$0.26 per $1\frac{1}{2}$ -ounce sack; Gail and Ax, \$0.26 per 2-ounce package.

The English tobaccos are all packed in air-tight, sealed tins. The Old English curve cut of the British-American Tobacco Co. is also packed in a sealed tin. The Bull Durham and the Gail and Ax tobaccos are packed in a cotton sack and paper package, respectively.

As a very large proportion of the pipe-smoking public in Chile is either British in nationality or by extraction, it would undoubtedly be a difficult matter to obtain any considerable sale for American pipe tobacco in this market.

Kinds of Cigarettes Sold—Methods of Packing.

Practically all well-known brands of English-made cigarettes are on sale here, as well as French, Italian, Cuban, Turkish, and Egyptian cigarettes.

The more expensive cigarettes are packed in tin boxes of 100 each or in small cardboard boxes containing 10 or 12. Some of the English cigarettes (notably those of W. D. & H. O. Wills) are put up in round sealed tins similar to the quarter-pound Capstan tins. These are also sold in paper packages of 10.

The climate of Chile is not detrimental to cigarettes, but for shipment to this country they should be well packed to withstand the long sea voyage. An excellent form of packing is that used for the Abdulla cigarette, in which sufficient packages to make up 1,000 cigarettes are incased in a hermetically sealed tin box. This prevents loss of flavor in transit or storage and makes a conveniently sized lot for wholesale distribution.

Chileans Smoke Chiefly Cigarettes—Extending American Sales.

Chile is very pronouncedly a cigarette-smoking country, and, while a large percentage of the population demands the black Cuban type, there is a steady market of good proportions for such types as Turkish, Egyptian, Maryland, Virginia, etc. There is a particularly good market now that it is difficult to obtain the lighter types of cigarettes that formerly came from the countries now at war.

With respect to cigars, Cuban and Mexican are preferred. The German cigars heretofore imported probably went directly to the large resident German colony, as did the Italian "Toscani" and "Virginia."

Any effort to extend the sale in Chile of American-made tobacco, cigars, or cigarettes would require the institution of an advertising campaign to insure a successful result.

[Lists of tobacco importers at Valparaiso, of general importers in Chile, and of Chilean manufacturers and dealers in tobacco may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65236.]

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he received in stock during the week ended September 18, the following new United States Government publications of a business character, which he will sell at the nominal prices affixed:

Fineness of Cement, An Air Analyzer for Determining, Standards Bureau Technologic Paper 48.—Describing various types of elutriators, and new forms of analyzers. Price, 20c.

Saving Fuel in Heating a House, Mines Bureau Technical Paper 97.—A practical work covering fuels used in heating residences, factors affecting the heating apparatus, and governing consumption of fuel and convenience of operation. Price, 5c.

Production of Beef in the South.—General discussion on the beef supply, covering relation of population to meat supply, world supply, with especial reference to the possibilities of beef raising in the South. Price, 10c.

The Pecan, Plant Industry Bulletin 251.—Work on the pecan, covering culture, propagation, planting, handling of the nuts, varieties, etc. Price, 10c.

Manufacture of Acid Phosphate, Agriculture Department Bulletin 144.—Covering the acid phosphate industry in the United States, embracing raw material, manufacturing, impurities, cost of production, disposal of product, with description of machinery used. Price, 10c.

Device for Sampling Grain, Seeds, and Other Material, Agriculture Department Bulletin 287.—Description of a practical device for sampling grain, etc., with detailed drawings. Price, 5c.

Bread and Breadmaking, Farmers' Bulletin 389.—Covering grain, flours, yeast, raised breads, unleavened breads, baking, with chemical composition of various flours. Price, 5c.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Hams, No. 18408.—This Bureau is in receipt of a letter from a firm in the West Indies, stating that it is in the market for hams. The ham should weigh from 10 to 11 pounds, and the price should be 19 cents per pound port of destination. "Diadem" or any other brand of similar quality is desired.

Fishing nets, No. 18409.—A firm in an insular possession of Portugal is desirous of purchasing five fishing nets—100 holes high and 1,000 long. Terms, cash against documents. Correspondence should be in Portuguese. Sample of the net desired is submitted with the report and may be inspected at the Bureau or its branch offices. (Refer to file No. 85705.) References can be furnished.

Tobacco, No. 18410.—A letter to this Bureau states that the inquirer has a call from a South American firm for the names of exporters of cigars and tobacco leaf. The cheaper grades, stogies and cheroots, are the variety of cigars wanted.

Machinery, No. 18411.—A commercial attaché of the Department of Commerce reports that a man in Holland is promoting a factory for making fish oil and will be interested to communicate with American manufacturers of the necessary machinery.

Cigarettes, cigarette paper, candles, olive oil, etc., No. 18412.—An American consular officer on the East African coast reports that a wholesale dealer in his district desires to receive catalogues on cigarettes, cigarette paper, candles, olive oil, and cheap grades of tobacco. Prices and discounts are requested. Correspondence may be in English.

Optical goods, No. 18413.—A letter to this Bureau from a business man in the Philippines states that he desires to receive catalogues and price lists from American manufacturers of optical goods.

Hats, No. 18414.—A hat jobber in the Far East requests the names of American dealers in Panama hats, with a view to establishing commercial relations with firms in this country.

Stationery and office supplies, No. 18415.—This Bureau is in receipt of a letter requesting the names of manufacturers of paper clips, thumb tacks, copiered metal letter fasteners, and modern office supplies and novelties. The articles desired are for export to France.

Wheat flour, wire, lubricating and illuminating oils, etc., No. 18416.—An American consular officer in Brazil reports that a firm in his district desires to secure American representation for the following products: Wheat flour, barbed and plain wire, lubricating and illuminating oils, pitch, soda, zinc sheets, sheets of Flander and similar articles. References are given.

Stoves, steel ceilings, etc., No. 18417.—A report from an American consular officer in South Africa states that a business man desires to secure agencies from American manufacturers of stoves, steel ceilings, bath and lavatory installation, etc. Correspondence may be in English. References given.

Scrap copper, No. 18418.—A firm in Venezuela requests an American consular officer to furnish names of manufacturers in the United States interested in old and scrap copper.

Kauri gum, No. 18419.—A firm in New Zealand informs an American consular officer that it is interested in getting in touch with varnish manufacturers in the United States desiring to purchase kauri gum. It is in a position to supply a limited quantity on good terms.

Paints and oils, No. 18420.—An American consular officer in India reports that a business man desires to be placed in communication with American manufacturers of paints and oils, with a view to taking up the exclusive representation in that market on a commission basis. Best references can be furnished. Correspondence may be in English.

Timber, coffee, machinery, etc., No. 18421.—A business man in Venezuela desires to establish commercial relations with American firms for the export of lumber, timber, coffee, and other Venezuelan products, and to import general merchandise. He also desires to purchase an electric coffee-roasting machine and asks for catalogues and prices. Correspondence should be in Spanish.

Glucose, No. 18422.—An American consular officer in France reports that a man desires to secure the representation in southern France of American manufacturers of glucose. It is stated that all goods can be bought on a cash basis. References are furnished. Correspondence may be in English.

Wire and wire cloth, No. 18423.—A firm in Spain informs an American consular officer that it is desirous of purchasing small wire and wire cloths. It would be glad to receive catalogues and quotations, together with samples of the materials. Samples of the wire desired have been submitted with the report and may be examined at the Bureau or its branch offices. (Refer to file No. 65878.)

Flour, hides, drugs, and chemicals, No. 18424.—An American consular officer in Portugal reports that a firm in his district desires to buy large quantities of flour, hides, drugs, and chemicals. A four months' credit is requested. Bank references furnished. Correspondence may be in English.

Thread and yarn, No. 18425.—A report from an American consular officer in Denmark states that a business man in that country desires to purchase thread and yarn in large quantities. References furnished. Correspondence may be in English.

Machinery, No. 18426.—The Bureau is in receipt of a letter from a business man in Norway, stating that he desires to become an agent for American exporters of machinery and machinery requisites for the manufacture of paper and wood pulp (mechanical and chemical). He states that he has been in business in chemical wares for many years and is well acquainted with the principal mills.

Agricultural machinery, No. 18427.—A communication to this Bureau requests the names of manufacturers of the latest style cultivators, spray pumps, and motors. A visitor to the Panama Exposition was impressed with the machinery on exhibition and now desires catalogues and price lists of same.

Moving-picture machines, etc. No. 18428.—A report from an American consular officer states that a man in Chile desires to correspond with American manufacturers of moving-picture machines for home use, which can be operated both by ordinary lighting current and by machine which generates its own light by the operator turning the wheel; and machinery for making phonograph records. The hydraulic press type is preferred. Catalogues and price lists are requested; also cable code for immediate telegraphic orders.

Cotton underwear and flannel cloth, No. 18429.—An American consular officer in Uruguay reports that an agent in his district, who has been very successful in selling American textile goods on commission, wishes to correspond with manufacturers of cheap and medium grade cotton underwear for men, women, and children; and also flannel cloth. It would be advisable to send samples with terms, as there are customers for the goods. Correspondence may be in English.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

RAILROAD PROGRESS IN SYRIA.

[Vice Consul Samuel Edelman, Aleppo, July 31.]

Despite the great crisis prevailing there has been no diminution in the railroad progress of the country. The Jaffa-Jerusalem line, controlled by a French company, but whose 25-year lease is about to expire, was taken over by the military authorities at the outbreak of the war. Work was immediately begun to connect this line with the Haifa-Damascus line, and in this way link the system with Aleppo (on the Bagdad line) and eventually connect with Constantinople.

Lydda, a station on the Jaffa-Jerusalem line, is the junction, whence the new line runs due north via Sebastiah, Djenin, and Afoulah, joining the Haifa-Damascus line to Deraa (on the Hedjaz line), a distance of 167 miles; thence over the Hedjaz line for a distance of 80 miles to Damascus, the entire distance from Jerusalem to Damascus being about 280 miles and entailing a 24-hour journey. On May 20, 1915, this branch line was opened to traffic, and the writer was the first passenger completing the railroad journey from Jerusalem to Damascus.

New Mileage of Bagdad Railway.

Equal energy has been displayed in the extension of the line from Aleppo toward Bagdad, known as the German or Bagdad Railway. In spite of all sorts of difficulties created by the abnormal situation, the Bagdad company has succeeded in opening for traffic more than 62 miles of line within the last two months. On June 1, the 39-mile line between Tell Ebiad and Touem was completed, including the construction of a bridge across the Euphrates. On July 23 the 26-mile line between Touem and Rees-ul-Ain was opened. The following stations at present compose the itinerary of this branch: Aleppo, Mouslemiie, Akterine, Tchoban Beyi, Akdje Koyounli, Hulmenie, Djerablus, Sifteik, Ser Arab Pounar, Kharab Nass, Qul Tepe, Tell Ebiad, Ghodjar, Touem, Tell-el-Hamoud, and Rees-ul-Ain. Trains leaving Aleppo at 6 in the morning arrive at the last station at 5 in the afternoon.

Mention must be made of the 56 miles constructed at the southern terminus of this line, from Bagdad to Samara. There now remain about 373 miles before the entire line between Aleppo and Bagdad is completed.

The Constantinople-Aleppo Line.

The Constantinople-Aleppo line is gradually nearing completion. At present trains run direct from Constantinople to Posanteah (a 3-day journey); here immense tunnels are being pierced through the Taurus Mountains. From Tarsus to Mamoure a completed branch of this line is in operation (about a day's journey), whence another series of tunnels is in process of construction. For the remaining 71 miles between Rajou and Aleppo the line is completed and trains are running regularly. Under present conditions the journey between Constantinople and Aleppo is completed in six days.

NAVIGATION SAFEGUARDS.

Modern Methods Reveal Serious Menaces to Shipping Not Heretofore Shown by Older Surveys.

Coast and Geodetic Survey parties have made a complete survey this season, by means of a wire drag, of the approaches to the important ports of Boston and the coast from there to Plymouth, which takes in the important route between Boston and the Cape Cod Canal.

Numerous patches of pinnacle rocks and boulders have been found by this means, and it is impossible to insure safety in any other way. It is a source of gratification to the Department of Commerce that in such a broken region it can state with certainty that all dangers, however small in extent, will be shown on the charts, and that shipmasters can lay a course with certainty to avoid all hidden dangers.

A report has just been received of the results of the work eastward and southeastward of Minots Ledge Lighthouse, which shows that the exceedingly broken and rocky areas of Stellwagen Ledges and approaches to Cohasset Harbor are duplicated in the deeper water farther eastward. This area had been previously closely surveyed by the old method with the lead, but numerous rocks with less depth than charted were found.

A rock with 25 feet over it was found on the sailing line heretofore recommended between Boston and Cape Cod Canal. It lies $1\frac{1}{2}$ miles 114° true (SE. by E. $\frac{1}{2}$ E. mag.) from Minots Ledge Lighthouse in a position where 51 feet was the least depth found by the previous survey with the lead.

Another rock with 21 feet over it was found at a point $1\frac{1}{2}$ miles 133° true (SSE. $\frac{1}{2}$ E. mag.) from Minots Ledge Lighthouse in a position where 41 feet was the least depth previously known.

As a result of negotiations that had their beginning in Trade Opportunities submitted by the Saloniki consulate, one firm of importers in that Greek city has purchased \$40,000 worth of sole leather and \$30,000 worth of upper leather from the United States; another has ordered \$140,000 worth of flour; and a third \$20,000 worth of starch, glucose, and corn oil.

ENGLISH REPORT ON AGRICULTURAL RETURNS.

[Consul General Robert P. Skinner, London, Sept. 8.]

The preliminary statement of the agricultural returns for England and Wales has been issued and will be scanned with interest. The increased area in wheat in England and Wales as compared with that of 1914 is 362,610 acres. The manner in which the returns are compiled this year shows considerable activity on the part of the farmers last autumn, as 2,029,250 acres were drilled with wheat before the close of the year. Spring sowings would doubtless have been much larger than 140,860 acres had the weather been satisfactory.

In 1914 there were 1,807,500 acres in England and Wales under wheat, and this year the total area is 2,170,110 acres. Naturally this has not been obtained wholly at the expense of comparatively unproductive land. Barley was expected to suffer most, and there are 273,050 fewer acres under this cereal than in the previous year, this representing 18.1 per cent of the total. The outlook for oats, a crop well suited for the English climate, is very good. There is an area of 2,088,050 acres under this crop, which represents an accretion of 8.2 per cent. Rye is not very popular and is not always grown to harvest. The acreage has fallen from 53,900 to 47,680.

Hay and Stock Feed.

The substantial addition to the cereals must be accounted for in some other way than by the area diverted from barley and rye. There has been little breaking up of permanent pasture, as the acreage has only contracted to the extent of 28,030 acres, or 0.2 per cent. Much of this, no doubt, is represented by the expansion of towns and other processes which eat into the agricultural surroundings. There are 150,000 acres less land kept for hay.

The returns do not show any great desire to break up poor pasture, and the Government, as the Earl of Shelbourne recently intimated, prefers to allow matters to take their course rather than expedite the use of the plow, either by the offer of a bounty or by fixing a minimum price. A study of the arable division indicates that most of the crops have contributed to the cereal expansion. Turnips and swedes¹ occupy 931,760 acres, a fall of 113,300. Mangolds have decreased by 4.3 per cent. Some 14,100 acres of vetches have been given up, and there are 3,170 fewer acres of small fruits, representing 4.1 per cent of the total. Peas and beans have substantially fallen, the former from 168,840 acres to 129,380 acres and the latter from 294,020 to 266,530. The potato, which furnishes so large a proportion of sound food, has been planted more extensively, the 463,400 acres being 1,780 more than in 1914.

Live-Stock Outlook.

The live-stock outlook, as reflected in the official figures, is quite cheerful. In spite of the heavy calls made upon the horse during the year, these figures, collected early in June, indicate a fall in total of only 8 per cent, viz, 1,287,180, as against 1,399,550 12 months ago. The extent to which cows were slaughtered in the first half of the year may be gathered from the fact that there are 2,434,500 cows in milk or in calf, which is 49,720 fewer than in 1914; yet the total

¹ Vegetable of the turnip variety used for feeding stock.

number of cattle, 6,064,150, is 3.2 per cent above the figures last year and is the highest yet recorded.

There are more breeding ewes and sheep one year and above, but a falling off in the number under one year. This is due to an indifferent lambing season, but the breeding resources are greater by 33,410 ewes, and of the 330,100 sheep over 1 year a substantial proportion will no doubt be drafted into the flock. The 17,522,580 sheep furnish an increase of 1.5 per cent. Pigs are a fluctuating quantity; sows have receded in number to 198,160, being a decrease of 12.4 per cent on 1914, but it is very easy to recover, as the pig is prolific. The "other pigs" number 2,121,870, only 19,230 less than 12 months ago. On the whole satisfaction is felt in England with the position of agricultural affairs.

CENSUS OF MANUFACTURES IN DISTRICT OF COLUMBIA.

While the Bureau of the Census, in its 1915 review of manufactures in the District of Columbia, reports a general increase over the figures for five years ago, the item of number of establishments alone shows a decrease, a numerical loss which the bureau says is accounted for by the reduced number of establishments in the bakery industry from 71 in 1909 to 58 in 1914. The decrease in all establishments, however, is only 5, from 518 to 513. The word "establishment," as used, may mean more than one mill or plant, provided they are owned or controlled and operated by a single individual, partnership, corporation, or other owner or operator.

In the order of their importance, from a percentage standpoint, the increases for the several items in this census of manufactures are: Primary horsepower, 49.1 per cent; salaries, 37.9; capital, 33.5; salaried employees, 26.3; proprietors and firm members, 22.1; wages, 21.8; materials, 17.8; wage earners, 15.3; value of products, 14.3; and value added by manufacture, 11.9 per cent.

The capital invested, as reported in 1914, was \$40,799,000, a gain of \$10,246,000, or 34 per cent, over \$30,553,000 in 1909. The average capital per establishment was approximately \$80,000 in 1914 and \$59,000 in 1909.

The value of products in 1914 was \$28,904,000, and in 1909, \$25,289,000, the increase being \$3,615,000, or 14 per cent. The average per establishment in 1914 was approximately \$56,000 and in 1909 \$49,000.

EXAMINATION REQUIRED FOR CERTIFICATE AS ABLE SEAMAN.

[Announcement of Steamboat-Inspection Service, Department of Commerce.]

Under the provisions of section 13 of the act of Congress approved March 4, 1915, entitled "Seamen's Act," regulations have been prescribed by the Secretary of Commerce, in Department Circular 264, for determining the knowledge of the duties of seamanship of persons who make application for examination for certificate of service as able seaman, after having served on deck 12 months at sea or on the Great Lakes.

When the circular is ready for distribution a supply will be furnished local inspectors, Steamboat-Inspection Service, chief officers of customs, and shipping commissioners for distribution to persons desiring it.

GOOD PROSPECTS FOR GREEK TOBACCO CROP.

[Vice Consul George P. Waller, jr., Athens, Aug. 31.]

Tobacco growers anticipate a crop for 1915 superior in quality and quantity to that of 1914. According to an article recently published, the Macedonian yield is expected to equal that of 1914, while in the Phthiotis-Phocis districts indications point to an increase of 20 to 30 per cent. Larissa is said to have a crop 15 per cent larger than that of the past season, and the Argolis-Corinth provinces promise an increase of 30 per cent. The average increase would seem to be not far from 15 per cent, when all districts are taken into consideration.

The figures for the tobacco crop for 1914 have just been given out in an annual report of the Ministry of National Economy. Reduced to English equivalents, they are given below.

Province.	Acreage.	Pounds.
Thessaly and Arta	13,308	12,524,000
Mainland of Greece	14,372	9,880,257
Peloponessus	6,177	4,655,474
Cyclades and Euboea	742	55,874
Ionian Isles	247.1	160,280
Macedonia	28,300	34,916,000
Epirus	790.7	434,511
Aegean Isles	5,030	4,232,250
Crete	494.2	210,365

As the tobacco crop in Greece matures in September-October, the tobacco year coincides with the calendar year.

ACTIVITY IN SILESIAN HARDWARE INDUSTRY.

[Consul Harry G. Seltzer, Breslau, Germany, Aug. 30.]

Due to the general depression in the building trades during the first year of the war and to the fact that many of the "small iron" industries were concerned chiefly with the manufacture of war supplies, the hardware trade has been somewhat neglected in this district. With the rebuilding operations in East Prussia and in the occupied portions of Russian Poland there has come a lively demand for small iron fittings of all kinds.

Orders for such fittings as hinges, locks, door hangers, escutcheons, etc., are now coming rapidly, not only for immediate use in operations already begun, but also to refill exhausted supplies in the hands of the dealers. The success of the German forces in the East has added considerably to the prevailing optimistic spirit, and builders are looking forward to a building boom never before experienced. Manufacturers anticipate no difficulty in securing sufficient material, but the shortage of labor will seriously affect this branch of industry for some time. For this reason they are not accepting any "short-time" orders at present.

After making all due allowance for Germany's producing capacity and the fact that its export trade will continue to be paralyzed for a long time, it can hardly be expected that home industries will be able to meet the coming demand.

HOP CROP IN BOHEMIA.

[Consul Wallace J. Young, Carlsbad, Austria, Bohemia, Aug. 30; supplementing dispatches in *COMMERCE REPORTS* for July 26 and 30, Aug. 18, and Sept. 13, 1915.]

Hop picking in the Saaz district is now nearing completion and reliable final estimates on the crop are now obtainable. The yield for this district this year is small, being 100,000 centners (1 centner equals 50 kilos or 110.231 pounds) or 11,000,000 pounds, as against last year's crop of 20,900,000 pounds—a 50 per cent decrease.

There was much overestimation in the earlier predictions, due to the excellent May and June weather, during which the earlier estimates were made, being followed by a cold and rainy July and August. Many blossoms did not fully mature, and this rainy weather has greatly interfered with the picking and drying.

While, particularly from the lower gardens, more or less discolored hops will be plentiful, still the quality of the crop, in general, is considered good and the hops are rich in lupuline and most aromatic.

The best quality are now bringing up to 120 crowns per centner (roughly 22 cents a pound) and the inferior quality 80 to 90 crowns per centner (14½ to 16 cents a pound).

Last year's first quality hops (of which there is but a small supply still on hand) are bringing 80 to 95 crowns per centner (14½ to 17½ cents per pound).

Ten bags of hops can now be exported without the deposit on the sacks of 6 crowns per kilo of weight (about \$4 per sack) and consequently exporters are sending their hops in lots of 10 sacks at a time. Empty bags being sent from Germany can be registered at the custom-house and returned filled, without deposit and without restrictions as to numbers.

FREIGHT RATES ON CEMENT FROM MARSEILLE.

[Consul General A. Gaulin, Marseille, France, Aug. 25.]

Since the outbreak of the war, the production and sale of cement in the Marseille district has declined at least 50 per cent. Exports have fallen off also in about the same proportion. The total exports of cement from Marseille during the first six months of 1915 amounted to 27,262 metric tons (metric ton=2,204.6 pounds) against 51,572 tons in the corresponding period of the previous year. Prices are 5 to 10 per cent higher now than they were in July, 1914.

The present freight rates per metric ton on cement in barrels from Marseille to various American and West Indian ports are; To Norfolk, \$4.25; New Orleans, \$4.25; Habana, \$6.75; Fort de France and Pointe a Pitre, \$4.83, plus 10 per cent and 25 per cent; Rio Janeiro (wharf), \$9.17, plus 10 per cent and 25 per cent; Buenos Aires, \$5.79, plus 10 per cent; Colon, Panama, \$5.79, plus 25 per cent and 10 per cent.

Except for Norfolk and New Orleans, there is an additional charge for slinging (élingage) of 1 franc per 1,000 kilos (\$0.193 per 2,204.6 pounds). The 10 per cent primage on the freight to Buenos Aires is reimbursable to the shippers under certain conditions. Wharf dues and charges for manifest and stamp taxes are not included in the above. It also appears that lower rates could be obtained for large shipments to Norfolk and New Orleans.

PROPOSED CHANGES IN BRITISH TARIFF.

[Telegram from American Consul General, London.]

A proposed measure providing for changes in the British customs tariff imposes an import duty of 33½ per cent ad valorem (or an equivalent specific duty) on the following articles at present exempt from duty: Cinematograph films, clocks and watches and parts thereof, musical instruments, hats and caps, plate glass, motor cars, and motor cycles. In addition, the following increases in duty have been provided for [shilling, 12 pence=\$0.243 (par value) hundred-weight, 112 pounds]:

Article.	Rate of duty.	
	Present (per pound).	Proposed (per pound).
Tea.....	s. d. 5	s. d. 7½
Cocoa.....	1	1½
Coffee.....	2	3
Chicory.....	2	3
Cigars.....	7	10½
Cavendish or negrohead tobacco:		
Manufactured in bond.....	4 8	7
Other.....	5 4	8
Cigarettes.....	5 8	8 6
Manufactured tobacco, not specified.....	4 8	7
Snuff:		
Containing more than 13 pounds moisture per 100 pounds.....	4 8	6 7½
Other.....	5 4	8
Tobacco, unmanufactured:		
Stripped or stemmed—		
Containing 10 pounds or more moisture per 100 pounds.....	3 8½	5 7
Other.....	4 1½	6 ¾
Unstripped or unstemmed—		
Containing 16 pounds or more moisture per 100 pounds.....	3 8	5 6
Other.....	4 1	6 1½
Dried fruit:	Per hundred weight.	Per hundred weight.
Currants.....	2	3
Figs, plums, prunelloes, prunes, and raisins.....	7	10 6
Sugar (according to degree of polarization) (from..... to.....)	1 10 1 10	4 6 9 4
Motor spirit (benzine, naphtha, gasoline, etc.).....	Per gallon. 3	Per gallon. 6

An excise duty of 7 shillings per hundredweight is to be levied on sugar and the excise taxes on patent medicines are to be doubled.

[According to press reports, the foregoing tariff changes were incorporated in a bill for the raising of additional revenue which was introduced in the House of Commons by the Chancellor of the Exchequer, and it is therefore anticipated that they will be enacted and put into effect without delay.]

RECORD DIVIDEND PAYMENTS ON HAWAIIAN STOCKS.

[Honolulu Star-Bulletin.]

Dividends amounting to more than a million dollars were paid during August on the various sugar stocks and stocks in commercial and utilities corporations of the islands which are listed on the local stock exchange. The exact total paid was \$1,160,265, which exceeds by \$280,540 the dividends paid by the same companies during the month of July of this year.

THE TOBACCO INDUSTRY OF CUBA.

[Consul Henry M. Wolcott, detailed as vice consul at Habana, Sept. 5.]

The report of the Association of Manufacturers of Cigars and Cigarettes of the Island of Cuba for the fiscal year 1914-15 says:

The year ending June 30 last, the twenty-eighth of the existence of the association, has truly been a most dreadful one for the tobacco industry of Cuba. The disastrous effects of the war in which the majority of the nations of Europe are involved are reflected even here in the tobacco industry of Cuba, which was already greatly depressed at the beginning of the war. The exportation of cigars and cigarettes for the year referred to was 102,818,692 cigars, valued at \$7,269,109, and 12,634,353 packages of cigarettes, valued at \$366,012, representing a decrease in the value of cigar exports of \$5,291,257 and of cigarette exports of \$154,448, as compared with the previous fiscal year. The natural result has been such a limitation in the manufacture of tobacco that many factories have been compelled to close entirely, and others have been obliged to cut their forces to the minimum.

Many formerly prosperous towns in the celebrated tobacco districts of Vuelta Abajo and Partido have been in an unfortunate condition during the past year, it being a source of surprise to the average observer that they have been able to exist.

Measures Designed to Alleviate Situation.

At the outbreak of the European war the Cuban Congress adopted measures—such as the export bounty and maritime insurance against casualties due to the war—which, it was hoped, might in some measure alleviate the situation in the tobacco industry. It was not possible, however, to realize any benefit from the bounty, since the import tariff law of the United States, as well as that of other countries, provides that an additional duty equivalent to the bounty be collected on all imported articles that have been subject to such bounty or grant in the country of their origin. The maritime insurance, it is stated, has not been taken advantage of because of difficulties, which are deemed insurmountable, in connection therewith.

Congress also voted an appropriation of \$500,000 for alleviating the condition of the laborers in this industry, and free railroad transportation was provided from the tobacco districts to districts where there was great activity in the planting and harvesting of cane. These measures, while relieving the situation of the people, did nothing to promote the welfare of the industry, and representatives of the Association of Cigar and Cigarette Manufacturers have been very active in urging a new reciprocity treaty with the United States, a *modus vivendi* with Spain, and treaties with some of the South American Republics, which would provide advantages for the tobacco of Cuba.

Growers Should Organize to Further Interests.

It seems, however, that it would be possible for the tobacco growers of Cuba to adopt measures which would be of far greater value to them, and to the manufacturers, than even reductions in foreign tariffs. For instance, if the growers in the various districts would organize upon the same basis as that of agricultural associations in other countries, provide for the selection and grading of their own tobacco, purchase necessary supplies (such as cheesecloth for shade, chemical fertilizers, etc.), and even conduct their own stores, they might effect a saving to themselves of probably not less than 50 per

cent. As it is, they are forced to borrow money at exorbitant rates of interest to finance their crops, and to pay excessive prices for all materials and supplies, including store supplies that are usually furnished on credit by the nearest Spanish bodega, or country store, at prices out of all proportion to the value of the merchandise. The result of this system is apparent.

Little Effort to Raise Other Crops—Effect of Adverse Conditions.

Further, there has been little attempt on the part of the tobacco planter to grow fruits and vegetables for his own use and for feeding his animals. This year there has been a well directed effort on the part of the Cuban Department of Agriculture to instruct and encourage the tobacco planters in growing crops, such as corn, potatoes, and vegetables for his own needs and for the local market. Competent agents have been sent into the tobacco districts with modern farm machinery to instruct the farmers in the best methods of corn culture, vegetable growing, and general farming.

While the adversity of the tobacco grower in Cuba works hardship at present, its ultimate results will probably be for the best, as it will not only tend to force many into other lines of effort, but will bring about better and more economical methods of culture. The tobacco crop will be greatly diminished this year, but the product will undoubtedly be of a superior quality and more economically produced.

Statistics of Production, Exportation, and Consumption.

The following table compiled by Señor Ramón La Villa, and published in the report of the Association of Manufacturers, shows the production of tobacco in the various districts of Cuba for the years stated. The figures for the present year are not yet available, but it is well known that the crop was greatly reduced.

District.	1910	1911	1912	1913	1914
	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>
Vuelta Abajo.....	223,292	135,680	182,598	266,928	237,410
Semi-Vuelta.....	23,994	12,322	24,379	32,896	40,334
Partido.....	61,060	97,969	59,081	87,149	80,833
Santa Clara.....	125,347	105,474	273,175	196,968	281,969
Matanzas.....	725	52	74	192	1,530

1914.....	9,129,661	426,147	210,234	9,766,042
CONSUMPTION.				
1904.....	7,368,640	4,168,690	333,996	11,871,326
1905.....	8,599,639	4,018,175	260,338	12,859,152
1906.....	7,845,100	4,350,212	129,842	12,324,155
1907.....	8,898,619	4,637,487	161,535	13,697,631
1908.....	6,667,443	4,457,354	139,588	11,264,385
1909.....	6,556,519	4,618,746	120,397	11,295,662
1910.....	7,614,701	4,913,012	116,669	12,644,372
1911.....	8,124,176	5,090,497	120,667	13,335,340
1912.....	9,421,850	6,574,715	166,007	16,163,562
1913.....	9,186,398	5,953,505	149,641	15,289,531
1914.....	8,496,730	5,145,740	163,124	13,795,594

While the foregoing figures represent the actual difference between the production and exportation of manufactured tobacco, it is not a true statement of the actual consumption of the people in Cuba, as it must be remembered that large quantities of cigars and cigarettes are purchased annually by visitors and taken out of the country with them to be consumed abroad. Also, residents of Cuba are in the habit of taking supplies of cigars and cigarettes with them when they go abroad for visits. There is, of course, no record of these exports. Considerable quantities of cigars and cigarettes are also sent to countries other than the United States by mail, of which there is no record. Altogether, it is probable that these exports represent an annual value of more than \$1,000,000.

The following table shows the value of exports of leaf and manufactured tobacco in the fiscal years ended June 30, 1914 and 1915:

Classes of tobacco.	Year ended June 30, 1914.	Year ended June 30, 1915.
Leaf tobacco in bales.....	\$18,802,542	\$14,129,392
Cigars.....	12,560,366	7,280,109
Cigarettes.....	520,460	366,012
Smoking tobacco.....	282,824	221,137
Total.....	32,166,192	21,970,650

IMPROVING THE WATER SUPPLY OF CARACAS.

[Consul Homer Brett, La Guaira, Venezuela, Aug. 27.]

The Government of Venezuela has appropriated 84,000 bolivars (bolivar=\$0.193) for the purchase of two farms situated upon one of the watersheds that supply Caracas. These will be depopulated and reforested and it is hoped that a considerable improvement in the quality of the water supplied to the city will result and that the present unduly high death rate will decrease.

PROSPECTS FOR GRENOBLE WALNUT AND FRUIT CROPS.

[Vice Consul T. W. Murton, Grenoble, France, Aug. 20.]

A recent personal inspection of some of the best growing grounds in the Isere Valley indicates that the production this year of walnuts of all grades will be unusually large and fine in this region. The trees, even at this advanced season, are still well in leaf, green, and healthy looking, and for the most part covered with nuts. In only a few places were signs of blight—or, rather, of decay—observable. The percentage of drop offs is remarkably small this year. The fruit maturing is large, sound, and meaty, well developed, and fairly regular in size. It is clean and comparatively free from spots. The proportion of diseased or wormy, shriveled, and imperfectly developed nuts appears to be small. The outlook is most encouraging.

Ripening is progressing normally, favored by fine, dry weather, warmth and sunshine, without too great heat or too much rain. That these crops will prove to be considerably above the average is the opinion of everyone competent to judge. They are already practically assured.

Favorable Season for Fruit—High Prices—Garden Crops.

The succeeding seasons in this part of France have been, throughout the year, about all that could be desired for fruit of all kinds—tree crops especially—except for vines. These are suffering from black rot and mildew, caused by short and intermittent periods of sun and rain in the spring. As a consequence the price of wine is advancing. Cherries, plums, and the like have been particularly abundant, so much so that in many country places in this vicinity quantities have rotted on the trees from lack of time and hands to gather them. This regrettable condition has been the cause of considerable loss not only to the producer but to the consumer as well, since the little fruit that has been brought to market has commanded high prices—more than double those of last year, when crops were poor in comparison.

There is also an abundance of other autumn orchard crops—apples and pears especially—but this fruit will probably command high prices, like the rest. On the other hand, garden crops are not so plentiful, as the raising of vegetables requires care and attention. All have risen greatly in value, and the cost of living in Grenoble has nearly doubled within the last six months.

Estimate of Walnut Yield—Buyers Should Place Orders Early.

As regards the walnut crops yet standing in the Isere Valley, the probable output, by kinds, may be estimated as follows: Pure Mayettes, 2,000 tons; Franquettes, 400 tons; Parisiens, 100 tons (these three qualities, all fine, when mixed are termed "commercial" Mayettes by the trade); Chabertes, or small nuts, 1,500 tons (exclusively employed for confectionery); total, 4,000 tons. It is learned that the Bordeaux walnut crops promise very large yields also, possibly 15,000 tons in all, and the quality is fine.

No prices are yet fixed for the Grenoble crops, since up to the present—contrary to the custom in normal times—no sales appear to have been made nor contracts entered into for forward delivery. Growers expect to realize high prices for their nuts, basing their belief on the difficulties apprehended in the harvesting and handling of the crops, the scarcity of manual labor and of sacking, high rates of transport, insurance, war risks, etc. It is expected that first ship-

ments will be ready to go forward to the United States early in October—about the 10th—as the season is in advance this year by at least 15 days. It would be unwise to call for deliveries before this date, as in such case the nuts would be imperfectly dried and unfit for shipment.

As the ocean voyage to New York via Marseille (the most practical way of shipping goods from here to America) occupies about 17 days, intending buyers would do well to place their orders early to enable exporters to make timely arrangements for freight and transport. An encumbrance of merchandise at the last moment would be likely to delay shipments.

If these suggestions be acted on, there is no apparent reason why the American importer should not receive full satisfaction this year.

EVENING SCHOOLS IN LEEDS.

[Consul Homer M. Byington, Leeds, England, Sept. 2.]

The Yorkshire Post of August 31, 1915, describes a brief outline of the organization of evening education in Leeds for the coming session which has been issued by the Secretary for Education in Leeds, to assist intending students to select the course most suited to their particular needs. In organizing the scheme of evening work for the city efforts have been made to arrange the courses of instruction to meet the requirements of all sections of the community, and the organization follows five main lines; namely, technical and technological training, commercial education and training, instruction and training in art, education and training in the domestic arts, and training courses for teachers of all grades.

The proportion of young people attending the technical evening schools of the city is far from satisfactory, but the education committee hope that with the cooperation of employers and labor, the young workers of the district in steadily increasing numbers will take full advantage of the courses of instruction provided for them.

The evening work in technical and technological education and training has been coordinated and systematized. It follows a continuous line from the general evening schools, through the branch artisan schools, and the minor mechanics' institutes, to the advanced technical schools, and ends in the University of Leeds.

In the comprehensive scheme of commercial education and training, which also ends in the University of Leeds, opportunities are provided for young persons who intend to follow a commercial career to obtain a complete and intelligent knowledge of all branches of commercial practice and to secure such training as will fit them for the highest positions in the commercial world. Instruction in art now follows a continuous line from the preparatory technical evening schools, through the branch schools of art, to the Central School of Art. From the beginning instruction in the principles and practice of art will be given, and special attention will be devoted to their relation and application to industry. The evening work in the domestic arts has been organized to follow a continuous line from the general evening schools for girls, through the branch young women's institutes, to the General Institute for Girls and Women. The courses aim at imparting a thoroughly useful knowledge of domestic and general subjects. The training courses for teachers will, as a rule, be held at the Thoresby high school.

TRANSPORTING CANADA'S GRAIN CROP.

[Consul Henry P. Starrett, Fort William, Ontario, Sept. 1; see also **COMMERCE REPORTS** for July 23, Aug. 24, and Sept. 9, 1915.]

Now that all reasonable danger to the grain crop of western Canada from weather conditions has passed, the problem of the transportation and storage of the crop has become acute. Fears are expressed that lake carriers will be overtaxed and that storage facilities are inadequate for handling the largest grain crop in the history of Canada.

These views, however, are opposed by the statement of a reliable authority that only in the event of traffic congestion during the first month of the grain movement could there be any serious danger from inadequate storage facilities. In support of this opinion it is pointed out that the total elevator capacity in the west, including country, interior terminal, and lake terminal elevators, is 139,374,000 bushels, and that of the eastern district 29,250,000 bushels, a total for all Canada of 168,624,000 bushels. This does not take into consideration the enormous amount of grain en route in the thousands of railroad cars now being sent to the west, and the considerable capacity of available lake steamers and barges.

Shipment of Export Grain.

The first carloads of the new crop arrived at Fort William terminal elevators a few days ago, and it is stated that within 10 days the heavy movement will be well under way. There appears to be no good basis for doubt as to the ability of the elevator and transportation facilities to handle the crop, unless serious congestion arises at the Atlantic ports, due to lack of ocean tonnage.

This latter point is the crux of the whole situation, for it is a well-known fact that for some time past there has been inadequate vessel tonnage on the coast even for the ordinary needs of commerce, and the approaching necessity for taking care of the export grain further complicates an already embarrassing situation. This condition has largely been brought about by the commandeering for war purposes by the Admiralty of a considerable percentage of available British ships engaged in the over-seas trade. To relieve the situation and to insure an adequate food supply to the British Isles during the coming winter, it is understood here that the Admiralty purposes releasing enough tonnage to move the Canadian grain exports promptly upon arrival at the seaboard.

Lake Freight Rates—Storage Charges.

Shipping interests have suffered from very low lake rates during the first half of the season, grain having been carried from Fort William to Buffalo at a rate of seven-eighths cent per bushel, this being below the actual cost of operation. It is hoped, therefore, that the higher rates which will be offered from now on will more than compensate owners for the losses incurred during the earlier part of the season. The continued movement of ore from Superior ports to the lower lakes at 45 cents per ton has had its effect on the fall grain rates in placing the latter on a very attractive level. Latest advices state that grain rates for the first half of October have been fixed at 2½ cents per bushel, last half of October 3 cents, and first half of November at 3½ cents, with probably a higher rate for the last few cargoes of the navigation season. The rates for winter storage of

grain in vessels is said to have been fixed at 4 cents per bushel, but up to the present writing no contracts have actually been made for such storage.

In conclusion it may be stated that every available bottom on the Great Lakes may reasonably expect to be busy for the balance of the navigation season and this with very attractive charters.

PERMANENT COMMERCIAL MUSEUM AT CALCUTTA.

[Consul General James A. Smith, Calcutta, India, Aug. 7.]

In view of the success which attended the sample exhibition of goods imported from Germany and Austria-Hungary and of competing Indian manufactures recently held at Calcutta and certain other commercial centers, the Government of India have decided to establish a permanent Commercial Museum in India. The museum will be located in Calcutta and will be attached to and form part of the Department of Commercial Intelligence.

The collection of samples and exhibits will naturally take time, and the development of the museum must necessarily be gradual. It is intended that the museum should contain samples of the principal manufactures imported into India from all foreign countries with which there is any existing or prospective Indian competition, and also representative samples of the corresponding Indian manufactures. It will also contain samples of goods marketed in foreign countries which India might be in a position to supply. It is further intended to exhibit representative samples of raw materials exported to foreign countries to be reimported in manufactured form, as also of raw materials which occur in India but are not at present worked, although products manufactured from similar materials are imported in considerable quantities.

The samples exhibited will be supplemented by catalogues and price lists, which will be kept continuously up to date; by printed statistics, wherever possible, showing the extent of the various markets in India and abroad; and by other information explanatory of the details of the trade. Names and addresses of firms dealing in the various trades will be maintained in the Commercial Intelligence Department and will be available for the information of buyers and sellers. It is hoped that the museum will be a valuable addition to the resources of the Commercial Intelligence Department as a bureau of information and a means of bringing manufacturers and traders together and that it will conduce to the development of the natural resources of the country.

Pending the selection of a permanent building the museum will be temporarily located in the Commerce and Industry Department building, No. 1, Council House Street, and arrangements are now being made to prepare the accommodation required. All the inquiries should be sent to the Director General of Commercial Intelligence at that address. The director general will welcome all applications from manufacturers for the exhibit of samples of their manufactures and all information which manufacturers or dealers may desire to communicate. It will be understood, however, that he will exercise complete discretion as to the samples which he decides should be exhibited. No heavy or bulky articles will for the present be exhibited.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Corset stays, No. 18430.—A report from an American consul in Uruguay states that the owner of a large corset factory in that country desires to buy regularly a large quantity of steel corset stays. Literature from manufacturers of other corset materials is also desired. Samples of the stays desired have been forwarded and may be inspected at the Bureau and its branch offices. (Refer to file No. 66033.) Correspondence in Spanish is preferred.

Agricultural machinery, chemical products, and dyes, No. 18431.—A firm in Spain informs an American consular officer that it wishes to correspond with American manufacturers of agricultural, industrial, and electrical machinery, pharmaceutical products, and dyes, with a view to representing them on a commission basis. It is stated that good references can be given. Catalogues and quotations in Spanish are preferable, although English may be used.

Insecticides and fungicides, No. 18432.—An American consular officer in South Africa reports that a firm in his district desires to receive by parcel post samples of insecticides and fungicides for diseases in fruit trees and vegetables. Quotations are desired c. i. f. South African ports, if possible, for cash against documents. It is requested that a cable code be arranged in case it is desired to send an order by wire.

Condensed milk, overall cloth, and American prints, No. 18433.—A business man in Central America informs an American consular officer that he is very anxious to represent manufacturers of condensed milk, overall cloth, and American prints.

Peg wood, No. 18434.—A report from an American consul in Denmark states that there is a market in that country for American peg wood to be used in the manufacture of shoe trees. Bank references are given.

Hardware and novelties, No. 18435.—A firm in Spain requests an American consular officer to place it in communication with American manufacturers of small hardware and novelties. Catalogues and quotations should be in Spanish and the terms clearly stated.

Rice, vegetables, and fruits, No. 18436.—An American consular officer in Uruguay reports that a firm in his district desires to secure American agencies for rice, vegetables, and fruits. References are furnished. Correspondence may be in English.

Wearing apparel, No. 18437.—A firm in Brazil informs an American consular officer that it desires to obtain catalogues, price lists, and other information regarding women's wearing apparel, especially white dress goods, children's clothing, and textiles used in the manufacture of these articles.

Cardboard, No. 18438.—A report from an American consular officer in India states that a firm in that country wishes to correspond with American manufacturers of cardboard suitable for making railway tickets. Samples of the cardboard desired and further information may be obtained from the Bureau and its branch offices. (Refer to file No. 66076.)

Office supplies, No. 18439.—A manager of a typewriter company in the United Kingdom informs an American consular officer that he wishes to act as agent for American firms dealing in office supplies, such as filing cabinets, loose-leaf binders, copying novelties, and paper fasteners. He particularly wishes to sell small time-saving devices retailing from \$1.82 to \$4.87 on a commission basis or buy outright. Bank references given.

Agricultural machinery, No. 18440.—A firm in Italy wishes to correspond with American manufacturers of harvesters, mowers, binders, and sowers, according to a report from a commercial agent of this Bureau. The firm desires to receive catalogues and prices, with quotations f. o. b. New York.

Glassware, wire, etc., No. 18441.—A commercial agent of the Bureau reports that a representative of one of the largest and most progressive importing commission houses in New Zealand is in this country for the purpose of making purchases and establishing agency connections with American manufacturers of glassware, lamp chimneys, lawn mowers, ice chests, wringers, coffee mills, lanterns, wire netting, caustic soda, cream of tartar, chloride of potash, and porous plasters.

Photographic chemicals and dyestuffs, No. 18442.—The Bureau is informed by one of its commercial agents that a representative of a European firm has recently arrived in this country to purchase photographic chemicals, such as metol, hydrochinol, hyposulphite, and dyestuffs, especially blacks. Address may be obtained from the Bureau or its branch offices.

Straw, No. 18443.—An American consular officer in Brazil reports that a business man in that country has requested the names of manufacturers and exporters of straw to be used for making chair bottoms. Cash against documents. Metric weights and measure should be used. Correspondence may be in German or Portuguese. A list of the largest consumers of straw on file at the Bureau. Full information and samples should also be sent to the American consulate.

Machinery, No. 18444.—A report from an American consular officer in Spain states that a Government department of Madrid wishes to communicate with American manufacturers of machinery for making paper.

Agricultural machinery, bags for cereals, etc., No. 18445.—A commission house in Argentina desires to receive catalogues and quotations on agricultural machinery, bags for cereals, sisal twine, mineral oils, construction material, lumber, coal, and carriages. An American bank is given as reference. Correspondence should be in Spanish.

Chemicals for hats, No. 18446.—An American consular officer in Greece reports that a firm of straw-hat manufacturers desires to communicate with American firms manufacturing carbonate of potash, 96 and 98 per cent pure; phosphate of soda, 98 and 99 per cent pure; oxalic acid, and gelatine of various kinds. The firm desires to place orders from 500 to 1,000 pounds at a time for each of these commodities. Quotations are desired c. i. f. Patras. Payments arranged to suit seller. Correspondence may be in English. Samples of the gelatine are requested.

Machinery, No. 18447.—A report from an American consular officer in the Far East states that catalogues, price lists, and full information regarding machinery for manufacturing toothpicks is desired by a business man in his district. Correspondence may be in English.

Copper, No. 18448.—An American consular officer in Switzerland reports that no offers have been received in connection with a bid calling for 200 metric tons of copper articles, the estimated value of which is \$77,200. An announcement of this bid was published as Confidential Circular No. 680, and Foreign Trade Opportunity No. 16829. It is suggested that American manufacturers transmit offers by cable without further delay. If this order can be satisfactorily placed in the United States, with reference to price and quality, it will doubtless lead to more and larger orders.

Cement, cottonseed oil, etc., No. 18449.—The Bureau is in receipt of a letter stating that an organization in the United States desires to get into communication with reliable manufacturers supplying cement, cottonseed oil, chemical products, shoes for women, men, and children, dried fruits, canned fruits and vegetables, fresh apples, and imitation jewelry. The organization is promoting trade with all Latin-American countries and has such inquiries direct from buyers in those countries.

Machinery, No. 18450.—An American consul in France submits a report stating that a firm dealing in industrial chemical products contemplates building a factory for extracting of tanning and vegetable dyestuffs and desires to receive offers from American makers of extractors.

Chemicals, cane, wire, etc., No. 18451.—A commercial agent of the Bureau reports that the following articles are urgently required in the Netherlands: Hydrochloric acid; chlorine; manganese dioxide, 85 per cent; sulphurous acid; jute coverings and jute yarns; cotton wool for the packing of fruit and flowers; reeds or chair cane; copper brushes for electric motors; copper sheets; copper for the manufacture of printing blocks; steel wire; liners; combers for the manufacture of cotton wool; packing twine; and zinc.

Chik-peas, olive oil, and wool, No. 18452.—The Bureau is informed by one of its commercial agents that a business man in Spain desires to sell chik-peas, olive oil, and wool. He desires to be advised as to the price of chik-peas per 100 kilos and olive oil per 11½ kilos.

RHENISH-WESTPHALIAN TEXTILE MANUFACTURERS.

[Consul Henry C. A. Damm, Aix la Chapelle, Germany, Aug. 20.]

The principal purpose of the Cooperative Association of Textile Manufacturers is that of mutual liability insurance. Its officials inspect the appliances installed in the mills for prevention of accidents to employees, and compensations for accidents incurred for which the employers are liable are paid by the association.

The assets of the association at the end of the year 1914 were \$735,062, of which \$693,714 constitute the reserve fund, and the remainder consists of real estate, bank balance, and working capital. The receipts for the year 1913 totaled \$224,045, derived from the membership dues, interest on reserve fund, rent from real estate, fines and penalties. The expenditures for the year 1913 reached \$223,507, including \$180,803 paid as compensations in cases of accidents. Other expenses were for conducting investigations in cases of accidents, inspection of safety appliances in the mills, salaries of officials, office expenses, taxes.

The association, with its headquarters at Muenchen-Gladbach, had, during 1914, a membership of 2,850 concerns, as against 2,954 in 1913, which engaged 144,659 employees, as against 157,888 in 1913. The Duesseldorf section had a membership of 121 concerns with 10,653 employees; Muenchen-Gladbach, 342 with 32,829; Elberfeld, 227 with 10,024; Barmen, 1,499 with 25,992; Lennep, 109 with 11,910; Aix la Chapelle, 293 with 22,797; Muenster, 259 concerns with 30,454 employees. During the year 1914 there were paid in wages \$31,196,162, as against \$36,207,476 the previous year. The average wage per employee, including females and minors, was \$217.30 which is slightly less than the average for the last five years. As compensation for accidents to employees \$180,366 was paid in 1914; 2,221 accidents were reported, 13 of which resulted in death.

SWEDISH DETACHABLE MOTORS BECOMING POPULAR.

[Chargé d'Affaires Jefferson Caffery, American Legation, Stockholm, Aug. 13.]

So popular has the Swedish-made outboard (detachable) motor become in this Kingdom and so high a place has it won for itself in the esteem of local users that manufacturers no longer fear foreign competition. The prices of the motors of 2 and 2½ horsepower range between \$94 and \$107.

In spite of the bad times the demand is great. It is not at all unusual for a firm to have a thousand motors in stock, and no one seems afraid that the price will drop because of an overproduction. The Swedish motors have been tried in foreign countries, and it is expected here that they will become a popular article for export.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1620 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

SWEDISH INVENTORY OF GRAIN.

[Chargé d'Affaires Jefferson Caffery, American Legation, Stockholm, Aug. 27.]

The Government of Sweden has decided to make an inventory of all the grain in the country, and the farmers are directed to hand in lists of their supplies of grain on hand before September 15. The Bureau of Statistics announces that the inventory will be completed by September 25 next.

CONSULAR TRADE CONFERENCES.

Consul Samuel C. Reat, of Calgary, Canada, will be in the United States on leave of absence until about October 10, 1915. He will be glad to confer with business men concerning trade in the Canadian Northwest; he also has a fund of information concerning Formosa, where he was formerly stationed. Consul Reat will be in Chicago until September 29 at Medina Temple, care P. K. Wilson & Co., and may be addressed October 1-4, care Col. T. J. Keenan, Pittsburgh, Pa.; October 1-8, care Consolidated Stock Exchange, New York.

COTTON FREIGHT RATES TO JAPAN.

[Extract from Japan Times of Aug. 24, by Consul General George H. Scidmore, Yokohama.]

It is learned that the Government has granted, under date of August 21, leave to raise freight rates on American cotton from 40 cents per picul (30 cents per 100 pounds) to 50 cents per picul (37½ cents per 100 pounds) to the three mail steamship companies running trans-Pacific services. Perhaps the reported retirement of the Pacific Mail liners from the line has induced the authorities to hurry up the decision on this question of such importance to spinning circles.

GOVERNMENT OF PORTUGAL TAKES OVER WHEAT CROP.

[Consul General W. L. Lowrie, Lisbon, Sept. 10.]

In order to regulate the supply and price of bread, the Government of Portugal has taken over the entire wheat crop of the country and has authorized the importation of 7,348,667 bushels of foreign wheat (see **COMMERCE REPORTS** for August 4, 1915) through the War Department. All flour mills in the country are required to furnish to the public and bakers three types of flour at prices not exceeding 16, 9.6, and 8.3 centavos (70 centavos equals \$1 at present exchange) per kilo (2.2 pounds). The exportation of wheat is forbidden and all supplies of the cereal on hand must be reported to the Government under penalty of confiscation or fine for failure to do so. Foreign wheat imported by the Government must be accepted and paid for by the mills at the price of 8.7 centavos c. i. f. Lisbon, Oporto, or the capitals of the insular districts. In order to guarantee the supply of bread, the Government may increase these prices if necessary. In the event that a mill refuses to operate with foreign wheat at the fixed price, the Government may take it over to be managed by the *Manutenção Militar*.

Bakeries are required to furnish three types of bread at fixed prices, and the Government may order additional types if the necessity occurs.

In order to induce farmers to make additional efforts for a larger yield of wheat in the next harvest year, the Government is authorized to offer 20 premiums of \$400 each and 20 of \$100 each for the best production from 20 and 5 hectares (49.42 and 12.35 acres).

An appropriation is authorized of \$50,000 for the establishment of a School of Agriculture and for the purchase of the necessary equipment.

The Government is authorized to take action to prevent speculation in fertilizers, of which Portugal imports 100,000 tons annually (heretofore largely from Germany, France, and England).

BECOMES LARGEST PRIVATE SHIPOWNING COMPANY.

[American Commercial Attaché A. H. Baldwin, London, Sept. 2.]

The Liverpool Journal of Commerce announces that an important shipping deal has been completed between the two firms of British shipowners, Messrs. Alfred Holt & Co. and Messrs. T. B. Royden & Co. Holt & Co. have acquired from Royden & Co. their fleet of *Indra* liners, seven in number, which run between New York and the Far East, and the transaction is of vast importance in further strengthening British shipping interests in the Far East.

The names and tonnage of the vessels are: *Indra*, 5,713 tons; *Indradeo*, 5,359 tons; *Indraghiri*, 5,723 tons; *Indrakuala*, 5,691 tons; *Indrasamha*, 5,197 tons; *Indrawadi*, 5,194 tons; and *Inverclyde*, 4,395 tons.

Holt & Co. now become probably the largest private shipowning company in the world, having about 80 ships, ranging from 4,000 to over 14,000 tons, most of which are engaged in the Far Eastern trade.

HARVESTING OF GRAPES IN CHAMPAGNE DISTRICT.

[Consul William Bardel, Epernay, France, Sept. 9.]

The harvesting of grapes in the Champagne district is about to commence, 10 days or 2 weeks earlier than in normal seasons. The advance in the development of the vines, brought about by fine weather in the later part of spring and the early part of summer, has been maintained. Unfortunately, however, adverse climatic conditions, such as showers accompanied by hail, have lately brought with them mildew and phylloxera, and these, together with the extraordinary development of the cochylis, which has recently commenced its attacks in all vineyards, have greatly diminished the prospects for the abundant crop of grapes predicted in a report from this consulate published in *COMMERCE REPORTS* for July 7. There were at that time reasonable prospects for a harvest of at least 600,000 hectoliters (15,850,230 gallons) of wine; it is now estimated that it will not exceed 350,000 hectoliters (9,245,968 gallons).

As to quality, little can be prophesied at this moment, but the general expectation is that this year will furnish a remarkably good wine. The wine growers, not being able to deliver the greater part of their last year's wine to the manufacturers, have much of last year's product still in the barrels. Since it will be absolutely necessary to add this year's wine to that of last year under the same conditions, a great scarcity of tonnage had to be overcome. By drawing against the stock of these receptacles in the possession of wine growers in the south of France, it is now expected that this difficulty is settled. The wines of 1914 and 1915 are believed to be very fine, but it will probably be a long time before they can be started on their way to become champagne by being placed in bottles.

NEW WORK ON SOUTH AMERICAN FINANCIAL AFFAIRS.

A new publication has just been issued by the Bureau of Foreign and Domestic Commerce, Department of Commerce, which should be of a high degree of interest to all who are giving attention to the problem of the extension of our trade abroad. It is entitled "Financial Developments in South American Countries," and reviews, in about 40 pages of a very clear and forceful style, the situation as regards the currency, the money market, the principal banks, and the general condition of business in Argentina, Bolivia, Brazil, Chile, Peru, and Uruguay during the last two or three years.

Especial emphasis is placed on the results of the European war and the measures taken by the various governments, financial institutions, and commercial communities to meet the situation thus created.

The author of this publication is Mr. William H. Lough, vice president of the Alexander Hamilton Institute, who has recently made a trip through the countries treated. Bankers, manufacturers, and exporters who wish to obtain definite and up-to-date information with regard to the present state of affairs in South America as to credit extension, government finances, currency conversion, emergency measures, and prospective changes and reforms should by all means acquaint themselves with the contents of this book. It is to be had from the Superintendent of Documents, Government Printing Office, Washington, D. C., for the price of 5 cents.

BRADFORD SHIPMENTS TO THE UNITED STATES.

[Consul Augustus E. Ingram, Bradford, England, Sept. 9.]

Declared exports to the United States through the Bradford consular district during August, 1915, amounted to \$1,470,049, compared with \$2,265,980 in August, 1914. Raw wool amounted to \$261,600, the bulk being carpet wools, the embargo on cross-bred wool still being in full force [although a concession was noted in *COMMERCE REPORTS* for Sept. 21]; in August last year wool shipments totaled \$626,129.

Mohair was shipped in larger quantities than at any time since the outbreak of the war, the total being \$304,255; it is therefore evident that the relative cheapness of this raw material, together with the difficulty of getting wool, is causing it to be used in the United States so far as possible as a substitute. This is also shown by the fact that for the last three months shipments of mohair tops have been made in fairly large quantities, which is a comparatively new item. (In this connection it is of interest to note that an auction sale of mohair was, in London on September 8, the first auction of mohair which has taken place in this country since July, 1908. It is reported, however, that "the abstention of buyers from Bradford, the chief center of the mohair industry, rendered the auction lifeless.") Wool noils and waste were also largely shipped to the United States from this district last month, but no wool tops were sent owing to the embargo, and wool yarns showed for the same reason a big falling off as compared with last year.

Worsted cloths, woolens, and wool dress goods also showed a considerable decrease not only as compared with last year but also with recent months. The American demand is far below normal, with an unwillingness to pay the high Bradford prices for wool goods. Shipments of cotton cloths, largely of linings, also show a decline as compared with last year, though prices have not advanced as for wool fabrics. Spun silk yarns continue to be shipped in fairly large quantities, the total for August being \$77,176.

NEW GOLD FIELD IN NORTHERN ONTARIO.

[Consul Henry P. Starrett, Fort William, Canada, Sept. 9.]

Reports reached here yesterday of an important gold strike on the Kow Kash River, a few miles north of Nipigon, district of Thunder Bay, Ontario. The mining recorder of this district states that this discovery is the most important development in gold prospecting ever reported in this section. Twenty-two claims along the river have already been located and recorded, and it is stated that more than 500 prospectors are now on their way to the new field.

No assay of the mineral has as yet been made, but a mining expert (Mr. Norman C. Pearce, of the *Sunday World* of Toronto) who has just returned from the region reports that the quartz is very rich in gold. He further states:

The country is Keewatin rock and the claims are being staked on belts of porphyry, chloritic schist, and diabase. There are intrusives of basalt occurring in something the same way as in the Munroe Township (Ontario), where the richest gold in Canada has been taken out during the last two months. The veins are quartz and schist, the ore in some of them being similar to that in the higher levels of the Hollinger mine.

PROMOTES UNIFORMITY IN STATISTICS OF CITIES.

The possibilities of cooperation between the National Government and the cities of the country in producing statistics of value to both are illustrated in the annual report of the comptroller of Baltimore for 1914, just issued.

The United States Bureau of the Census has established uniform municipal-expenditure classifications in publishing its statistics of cities, and these classifications have been adopted by the Baltimore comptroller in making his report for the year. The Maryland city is in this respect coincided with the same course that has been adopted by Knoxville, Tenn., in its financial reports, and in following the lead of the United States Government such cities are laying the foundation for a uniform accounting system which promises exceptional opportunities to make the work of the municipal departments contribute to the growing store of facts relating to cities gathered by the United States Government.

It is pointed out by the Bureau of the Census that if all the cities adopted the uniform classifications the combined results would constitute a census of the country in this class of statistics, produced simply by combining the official annual reports of all the cities. This would mean prompt, frequent, and economical gathering of such facts.

The Baltimore report states, in explanation of the work done, that its summary of the budgetary statement of the finances of all departments of the city for 1914 is "classified under the 10 various functions of city government in accordance with the uniform municipal-expenditure classifications of the United States Bureau of the Census, as published in 'Statistics of Cities.'"

UNSIGNED LETTERS DETRIMENTAL TO TRADE.

[Consul General L. J. Keena, Valparaiso, Chile, July 22.]

Unsigned business letters from American firms which have been received here are criticized by the Chilean recipients, and their criticisms have been confirmed by the increasing proportion of letters coming to this consulate general without signatures.

The comments that have been heard apply to three classes—letters asking for information, letters of acknowledgment, and those making business offers. It is unlikely that a letter of the third class, unsigned, would inspire much confidence here, as the conclusion would naturally be drawn that it had received purely perfunctory attention on the part of the writer, or had been written by some one who had no authority to sign it.

An unsigned offer of sale creates an impression similar to that which was produced several years ago, when numerous letters were sent out by business houses in the United States conspicuously stamped: "Dictated, but not reread."

Similar complaint regarding the sending of trade letters from the United States without signatures was received from the consulate at Hankow, China, in a communication published in **COMMERCE REPORTS** for June 11, 1915. It was then stated that the practice was invariably construed by foreign merchants as a sign that the American houses involved lacked any real interest in the possible sale of their goods abroad.

SOME COAL-MINE PROFITS: SOUTH WALES FIELD.*[Consul Lorin A. Lathrop, Cardiff, Wales, Aug. 26.]*

Certain collieries have held statutory annual meetings, and have issued reports of financial results for the business year July 1, 1914, to June 30, 1915.

Insoles, Limited.

Ordinary shares, \$876,000; preference shares, \$292,000; bonded debt, \$182,500; total stocks and bonds, \$1,350,500.

Average annual coal production, 800,000 tons of 2,240 pounds; for the year July, 1914-June, 1915, 545,000 tons. The falling off is attributed to cessation of business at the opening of war and subsequent shortage of labor through enlistment. Net profit, 1914-15, \$158,500. Dividend on ordinary shares, 10 per cent. Profits in four previous years: 1911, \$142,000; dividend, 10 per cent; 1912, \$108,000; dividend, 10 per cent; 1913, \$264,500; dividend, 20 per cent; 1914, \$125,000; dividend, 6 per cent. The profit per ton raised last year appears to have been \$0.29; the year before, about \$0.15.

The Fernhill Collieries, Limited.

This company has issued 5 per cent bonds to the value of \$730,000; 7 per cent preference shares, \$486,500; common stock, \$486,500. Its average production is between 600,000 and 700,000 tons per annum. Its profit for the year July, 1914-June, 1915, was \$191,000, and the dividend paid was at the rate of 16 per cent, the same as in 1911, 1912, and 1913; but the dividend for the year 1913-14 was at the rate of 10 per cent. The reduction for that year is stated by the chairman to have been made from caution, in view of possible financial stringency rather than from inability to maintain the average.

The output for the year 1914-15 fell to 550,000 tons, owing to labor shortage through the enlistment of 30 per cent of employees. The profit of \$191,000 for last year compares with \$156,000 for the year before, and this increased profit of \$35,000 was earned on an output reduced by 118,000 tons. The profit per ton raised in 1913-14 appears to have been \$0.23; in 1914-15, \$0.34.

The Windsor Steam Coal Company, Limited.

Stock and bonded debt, \$1,900,000. Average annual output, 500,000 tons; last year, 420,000 tons. Net profit, \$208,000.

This company has paid no dividends in its history, but has expended large sums on development work. It has paid off this year final arrears of preference dividends, and can henceforth apply profits to dividends on common stock. It has lost 36 per cent of its employees through enlistment, but the output has not been correspondingly reduced. Results show a profit of 50 cents per ton produced.

The Main Colliery Company, Limited.

The capital of the company is represented by 5,000 cumulative and participating preference shares of \$48.66 each, \$243,300; 10,000 \$48.66 ordinary shares, \$486,600; 10,000 \$48.66 ordinary shares (\$38.93 paid), \$389,300; total, \$1,119,200.

The profit for the year July, 1914-June, 1915, amounted to \$105,500, \$41,360 being placed to reserves for developments and renewals, \$17,030 to steamship insurance and depreciation reserve, and \$24,330 to depreciation of property, leaving a net profit of \$22,780.

This sum was carried forward and the dividend on the ordinary shares was passed. The company has paid 6 per cent on these for some years past.

SHIPPING LINES OUT OF PUGET SOUND.

[Commercial Agent W. B. Henderson, Seattle, Wash., Sept. 11.]

In addition to the five regular lines operating out of Puget Sound to the Orient, three to European countries, via Panama Canal, and two to Australia, Puget Sound frequently adds new lines which give the ports of this coast much better shipping facilities. The "tramp charters" operating out of Puget Sound in the oriental, European, and Atlantic-Pacific trade seem to be on the increase, and despite the tremendous advance in charter rates since the outbreak of the war the fleet under contract to carry grain from Puget Sound and Columbia River points the present season shows little or no loss in net tonnage as compared with the fleet under charter last year at this time.

The fleet already under charter this season numbers 46 vessels, most of which are sailing vessels, with an aggregate tonnage of 101,677. Last year at this time it was 104,171 in tonnage, and in 1913, 62,731. All but three of the ships chartered to date will carry grain from Puget Sound and Columbia River points to the United Kingdom. Two vessels will load for Australia and one for South Africa.

Notwithstanding this fleet is nearly the same in number and tonnage as last year, the rates are more than double—as, for instance, last year the charters accepted rates from this coast to the United Kingdom on grain at 28 to 30 shillings (\$6.81 to \$7.30). This year the lowest rate is 67 shillings 6 pence (\$16.41), and but two ships were secured at that figure. Twenty-six vessels of the present fleet have been chartered at 80 shillings (\$19.46) and some few as high as 90 shillings (\$21.90). In one instance rates were 97 shillings 6 pence (\$23.72), with an option of 100 shillings (\$24.33) to France.

There are likewise better shipping facilities in store for the west coast of South America if all plans succeed. The Norwegian freighter *Sinoloa*, which is to engage in the Seattle-West Coast South American trade, arrived in this port from Anchorage, Cook Inlet, this week. It is owned by a San Francisco firm which announces that the ship will operate regularly in the South American trade out of Seattle in connection with its companion vessel *Baja California*.

Two prominent Portland transportation men (names on file here) were in this office this week and announced that they have a company in the formative state which will put a large fleet in operation between Puget Sound, Columbia River, and the west coast of South America to handle lumber of the Pacific Northwest.

In addition to the above improvements and prospective improvements in the shipping facilities to all the ports of this section, the *Edison Light*, of the C. H. Sprague & Son's Line from Boston to Seattle, which was announced in COMMERCE REPORTS some weeks ago, reached this port a few days since. There are now two vessels operating in this new Atlantic-Pacific line, to which, as announced by the agent for the company, as soon as business justifies it new steamers will be added.

FAR EASTERN FLOUR SITUATION.

[Consul General George E. Anderson, Hongkong, Aug. 10.]

What the current year is to mean for American millers interested in the Far Eastern trade is problematical. While lower prices in the United States have made a little business possible in the past few weeks, the new crop situation on the whole is not such as to promise much trade in this direction, and the buying power of Chinese consumers in South China is at low ebb because of general trade conditions. The imports of flour into Hongkong for the first half of the current fiscal year amounted to 1,204,166 bags, as compared with 2,543,815 bags in the first half of last year, of which 327,605 bags were Canadian. Of the imports this year 1,152,260 bags were from the United States and 51,906 bags were from Canada. The general trade situation, of course, affected Canadian shipments materially, but the chief cause of the falling off in shipments of the Canadian product seems to be in the fact that the special transportation facilities which made the import of a largely increased proportion of the Hongkong supply last year from Canada possible are not now available. Stocks on hand at the end of the half year in Hongkong amounted to 550,000 bags, as compared with 800,000 bags at the same time last year.

Australia has been practically out of the market in south Asia for some time. Shipments of flour from Australia have been to Great Britain only, and the supply of grain in Australia has been so short that certain shipments of grain were imported to meet contracts.

With Australia out of the market American flour has been going into the Straits Settlements and Malay States, Siam, Java, Sumatra, and the East Indies generally much more freely than usual and the indications are that there will be considerable trade for American flour in that part of the world this year. This trade at present is handled almost exclusively through Hongkong. The flour is shipped here for transshipment and the sales are financed through Hongkong. The machinery of the trade is here, while on the other hand American exporters are not so closely in touch with Singapore, Batavia, and other importers and find it advantageous to deal through Hongkong because of that fact.

The freight situation has, of course, interfered with all this trade materially not only in the high freight rates out which have increased the price here and thus reduced consumption but also in the coast rates which have increased the cost to coast consumers. There also has been the difficulty of securing space for cargo, delaying shipments and increasing warehouse charges.

Shipments of Chinese flour from Shanghai have been cutting into the trade in this field not only in the coast ports but even in shipments to the south. The Chinese flour is of no better quality than it has been in previous years but it comes cheaper than the imported flour and cheapness controls where the article offered at the lower rate can be made to satisfy the needs of Chinese consumers.

Present indications are that initial buying of the new crop in the United States for this market will be far below the usual volume. Business is likely to be on a hand-to-mouth basis for some time unless there is a marked drop in American prices. Dealers in Hongkong have not had a good half year, most of them buying considerable

quantities of flour at high prices and selling on the decline. They will take new business only on a restricted scale at best so long as present conditions continue.

SHORTAGE OF PHOTOGRAPHIC SUPPLIES AT NOTTINGHAM.

[Consul C. M. Hitch and Vice Consul Leroy Weber, Nottingham, England, Aug. 6.]

This market offers at present a good opportunity for the sale of all kinds of photographic supplies, chemicals, and sundries. In the past local dealers obtained a large proportion of this class of goods from Continental nations, which are now, because of the war, unable to sell in this market.

This is particularly the case with raw paper, used as a basis for photographic purposes, and also cardboard used for mounting purposes. There is a marked shortage of these articles, the greater part of the supply previously used in this market having been of French and German manufacture. Prices have risen from 15 per cent up, with no guaranty of delivery.

Glass plates, which in the past were furnished to this market principally by Belgian manufacturers, have increased in price fully 25 per cent. These plates ($6\frac{1}{2}$ by $4\frac{1}{4}$) are at present being returned to some of the English manufacturers after they have been used. They are then put through a recoating process and sold again to the trade.

Flash-light Powder—Difficulty in Securing Chemicals.

Flash-light powder is not much used here during the spring and summer months, and for this reason local dealers have not felt the shortage of this article to any great extent. Since practically all of this powder has ordinarily been obtained from Germany, however, it is expected that when the demand increases during the autumn and winter months the price will rise accordingly.

The British Government has found it desirable to utilize for military purposes the bulk of the chemicals used in this country, and dealers in photographic supplies have experienced great difficulty in securing necessary chemicals. This is especially the case with hyposulphite of soda, which has risen from 2 to 10 cents per pound since the outbreak of the war. Where dealers in the past bought by the cask they are now obliged to content themselves with a few pounds at a time.

The method of packing employed by American manufacturers is considered satisfactory to local purchasers. The terms of sale vary according to purchaser and amount of purchase.

[Names of the principal dealers in photographic supplies, chemicals, sundries, etc., in Nottingham may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65218.]

SALE OF CANADIAN WOOL.

[Consul Samuel C. Rent, Calgary, Alberta, Sept. 9.]

In a report from this consulate in COMMERCE REPORTS for August 17, 1915, concerning a sale of wool conducted by the Alberta Sheep Breeders' Association, the average price of 95,490 pounds of wool purchased by a Boston firm was stated as 22.77 cents per pound instead of 27.77 cents.

VALUE OF ALASKA FISHERIES YIELD AT HIGHEST MARK.

The report of the Bureau of Fisheries dealing with Alaska fisheries and fur industries in 1914 shows that while the total investment in the industry in that Territory decreased \$8,673 in 1914 from the amount shown the preceding year, and while the number of persons engaged was 21,200, compared with 21,721 in 1913, the total value of the products in 1914 was \$21,242,975, as against \$15,739,068 in 1913, an increase in 1914 of \$5,503,907 to the highest point ever reached. The pronounced increase in value of products, the bureau says, was due to the large pack of red salmon and the high price commanded by all species of canned salmon. The investment for 1914 was \$37,038,632.

"One of the best methods of meeting a threatened decrease in the supply of salmon or other fishes," says the bureau, "is by closing streams or waters to commercial fishing, so that the natural spawning grounds will not be disturbed or encroached upon by fishermen. This means of conserving the rich fishery resources of Alaska has been adopted with success in a number of instances and is looked upon with favor by the fishing interests most vitally concerned, as limitations along this line are recognized as being essential at times to safeguard the industry."

Waters mentioned as closed to commercial fishing in 1914 by order of the Secretary of Commerce, in pursuance of this policy, are Wood and Nushagak Rivers, in western Alaska; in central Alaska, all streams flowing into Cook Inlet, Eyak Lake, and a limitation on fishing in Eyak River; and in southeast Alaska, Anan Creek and Naha Stream. In addition, fishing limitations by authority of Executive order of the President apply to waters of Afognac Reservation, Aleutian Islands Reservation, and Yes Bay and Stream.

The work of the Bureau of Fisheries in Alaska is in three branches—the enforcement of the law and regulations for the protection of the fisheries proper and the operation of hatcheries, the administration of the fur-seal fisheries, and the minor fur-bearing animal service.

A comprehensive review of the entire Alaska field, with figures and comparisons and results of the work done, is given in this 90-page publication, copies of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., at 15 cents per copy.

ARGENTINA TO BUILD GRAIN ELEVATORS.

The President and Minister of Agriculture of Argentina, after considering proposals from syndicates in foreign countries for the establishment of grain elevators in the agricultural zone of the country, have decided to formulate a law providing for the construction of such elevators, and to call for bids, both in Argentina and in foreign countries. United States Consul General W. Henry Robertson, at Buenos Aires, transmits a copy of *La Prensa*, dated August 9, in which the attitude of the Argentine officials is set forth. The projected installation of an extensive system of elevators in Argentina, with terminal stations at Buenos Aires, Rosario, and Bahia Blanca, was the subject of an article published in *COMMERCE REPORTS* for August 24, 1915.

SHORT RICE CROP IN STATE OF SAO PAULO.

[Consul Maddin Summers, São Paulo, Brazil, Aug. 18.]

As rice and beans are the most common articles of food in the São Paulo section of Brazil and might be called the national dishes, the crops of both have received special attention from the agricultural authorities. The present rice crop in the State of São Paulo, however, appears to be very short, and there is a possibility that large quantities will have to be imported from abroad.

In reply to a recent circular letter from the State Director of Industry and Commerce, asking for information in regard to the rice market, two large importing firms of São Paulo informed the director that the production of rice in the State of São Paulo during the present year would not suffice for the local consumption, and that large quantities would have to be purchased either from the other Brazilian States or from abroad. The short crop is due to continued droughts.

Sao Paulo's Record of Rice Production.

The production of the State of São Paulo during the past four years, in sacks of 128 pounds, was: 1911, 1,049,827 sacks; 1912, 1,742,130 sacks; 1913, 1,390,733 sacks; 1914, 1,500,000 sacks.

The municipalities producing rice, in order of their importance, are: Iguape, Monte Alto, Taubate, Barretos, Guaratingueta, Franca, Igarapava, and Pindamonhangaba.

During the four-year period the imports from abroad and their value were: 1911, 1,235 tons net, valued at \$73,553; 1912, 168 tons, \$14,618; 1913, 32 tons, \$3,820; and 1914, 457 tons, \$34,216. These imports came, respectively, from India, Italy, and Japan, large quantities being transhipped from Hamburg.

Imports from other States of the Federal Union in these years, and their values, were: 1911, 886 tons net, valued at \$124,592; 1912, 377 tons, \$52,950; 1913, 5,019 tons, \$784,202; and 1914, 3,000 tons, \$427,920. The larger part of these importations came by coasting vessels from Rio Grande do Sul and Santa Catharina, both of which have developed during the past few years into large rice-growing sections.

Average Prices for Last Year and Present Prices.

The average prices of rice during 1914, for sacks of 128 pounds, in the local market were: No. 1 Agulha (needle) clean, \$7 to \$9; No. 2, \$6.50 to \$8; No. 3, \$6 to \$7; Nos. 1, 2, and 3 Cattete, same as Agulha.

The present prices are: No. 1 Agulha (needle) clean, \$8 to \$9; No. 2, \$7 to \$7.50; No. 3, \$6.50 to \$7; Nos. 1, 2, and 3 Cattete, same as Agulha, possibly a little less.

These quotations are in large quantities. It is doubted if the prices would stand if purchasing were heavy, the tendency being to advance. A rise of 33 per cent is predicted within a short time.

It is learned through inquiries in São Paulo that the stock of rice on hand is extremely low, but, taking the recent rice quotations and comparing them with prices here, it appears that, after paying freight, duty, commission, railway charges from Santos to São Paulo, and other charges, the profits that might now be made on rice exported here from the United States would be small, compared with those on shipments from other countries.

CHILE'S FOREIGN TRADE FOR HALF YEAR.

[Consul General L. J. Keena, Valparaiso, Aug. 23.]

The Central Bureau of Statistics has just published a résumé of the Chilean export and import trade for the first six months of 1915, compared with the corresponding period in 1914. The figures for imports in United States currency are:

Articles.	1914	1915	Articles.	1914	1915
Animal products.....	\$3,668,082	\$1,656,447	Chemicals, perfumeries, etc	\$1,494,591	\$665,528
Vegetable products.....	7,229,283	5,242,679	Machinery, tools, etc.....	5,378,954	2,713,570
Mineral products.....	9,879,126	2,585,132	Arms.....	1,063,882	694,112
Textiles.....	12,035,613	5,181,742	All other articles.....	493,359	573,269
Oils, coal, etc.....	9,770,449	2,746,728			
Wines and liquors.....	945,773	349,881	Total.....	53,467,543	23,270,655
Paper, etc.....	1,518,331	861,567			

Comparing the values for the six-months' periods of the two years, a difference of \$30,196,888 in favor of 1914 is shown.

In a comparison between the exports for the first six months of 1915 and those for the first half of the preceding year there is a difference in favor of 1914 amounting to \$20,022,604. The figures for the various classes of goods, in United States currency, are:

Classes of articles.	1914	1915	Classes of articles.	1914	1915
Animal products.....	\$5,512,217	\$6,955,846	All other articles.....	\$56,687	\$58,490
Vegetable products.....	3,802,657	4,111,154			
Mineral products.....	58,323,824	36,535,476	Total.....	67,730,877	47,708,273
Wines and liquors.....	35,492	47,298			

BRUNSWICK'S SHOE AND LEATHER MARKET.

[Consul Talbot J. Albert, Brunswick, Germany, Aug. 25.]

The prices of shoes and leather have greatly advanced in Germany on account of the war. It is recommended in west Germany that French wooden shoes be worn and in middle Germany wooden slippers. In the summer months a return to the old custom of bare feet is suggested. The school authorities should be instructed that the use of wooden shoes and slippers by the pupils not only be permitted, but urged. Attention is called also to the statement that nailed shoes last three or four times longer than those without nails.

A fair is held in Brunswick in August and February each year. This custom is several centuries old and before the era of railroads it was a great event, there being exhibits from Russia, Italy, and nearly all European countries. The fair then lasted three or four weeks. In recent years it continues only five or six days and foreign exhibits are rare. The leather exhibit, however, remains an important feature. The following were the prices per pound of leather at the fair just closed:

Sole leather, oak tanned...	\$1.55-\$1.73	Brown kipse	\$1.90-\$2.38
Sole leather, natural (zahmschleider).....	1.55- 1.67	Black kipse	1.90- 2.38
Sole leather coupons.....	1.90- 2.03	Greasy (fettgäre) leather..	1.31- 1.37
Vache (boot) coupons.....	1.90- 2.02	White (weissgäre) leather..	1.13- 1.25
Vache in halves.....	1.55- 1.76	Strap-leather coupons.....	1.55- 1.67
Pale leather (fablleider)..	2.02- 2.14	Black harness leather....	1.55- 1.90
Brown calf leather.....	2.38- 2.95	Brown harness leather....	2.02

SWEDISH FOOD-PRODUCTS TRADE DURING THE HALF YEAR.

[Chargé d'Affaires Jefferson Caffery, American Legation, Stockholm, Aug. 5.]

The following table shows, by quantities, the Swedish imports and exports of food products during the first half years of 1915 and 1914 (kilo=2.2046 pounds; liter=0.26417 gallon):

MUNICIPAL SALES OF MEAT IN BRESLAU.

[Consul Harry G. Seitzer, Breslau, Germany, Aug. 30.]

On August 10 the first semiweekly sale of smoked pork to the civil population of Breslau was opened in the market hall on Ritterplatz. One ton of this meat was sold in quantities not exceeding 10 pounds to each customer and at a uniform price of 1.50 marks (\$0.357) per pound. This is 25 per cent below regular market price. The sales will be conducted every Tuesday and Friday until the present supply of 20 tons is exhausted. Each customer must secure a ticket of admission on the preceding days. Entrance to the market is restricted to one door, and not more than 10 persons are admitted at once. The meat was reported to be in excellent condition and the purchasers were well satisfied. This meat comes from the municipal slaughterings of hogs.

Encouraged by the success of this municipal venture, the city of Breslau will now slaughter 1,500 steers and preserve the meat in the municipal cold-storage plants. The first killing of 49 steers in the municipal slaughterhouses occurred last week, and will continue until the total number have been dressed. This meat will also be sold in limited quantities and at fixed prices. The city does not expect to profit financially by this transaction, but will fix prices so as to include only the actual cost and the cost of handling and sale.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Machinery for compressing tooth powder, No. 18453.—An American consular officer reports that a dentist in Brazil desires to receive catalogues and prices of machinery for compressing tooth powder into tablets, and, if possible, stamp letters on the tablet.

Textiles, etc., No. 18454.—A commission merchant operating in Argentina is interested in establishing agency connections with American manufacturers of woolen goods; cotton goods; cotton and woolen mixtures; underwear; hosiery; handkerchiefs; silks; and mercerized silk mixtures. He is now in the United States. His address may be obtained from the bureau or its branch offices.

Glass, hardware, etc., No. 18455.—A commercial agent of the bureau reports that a representative of a South American firm, now in this country, desires to become an agent for American manufacturers of window glass, plate glass, sponges, steel shavings, builder's hardware, and construction materials. He formerly acted as a manufacturers' agent.

Chemical products and drugs, No. 18456.—A wholesale house in Italy informs an American consular officer that it desires to establish commercial relations with firms in the United States dealing in caustic soda, drugs, gums, barks, and herbs for medicinal purposes. Correspondence must be in Italian or French and quotations c. i. f. Italian ports. References given and required.

Underwear, No. 18457.—A commercial agent of the Bureau reports that a representative of a firm in Australia is anxious to be placed in communication with American manufacturers of fleecy underwear for women.

Wool grease, No. 18458.—The Bureau is informed that a firm in this country has an inquiry from Sweden for the purchase of large quantities of wool grease, especially common brown grease of cheap grade. References furnished.

Dress clasps, No. 18459.—A report from an American consular officer in Brazil states that a business man in his district can place an initial order for 500,000 gross dress clasps. It is requested that American manufacturers furnish prices and samples of dress clasps, similar to the sample which may be examined at the Bureau or its branch offices. (Refer to File No. 66183.) Payment to be made in any manner agreeable to manufacturers. References given.

Window glass, No. 18460.—An American consular officer in Spain reports that a business man in his district wishes to secure an agency for window glass. He desires to act on a commission basis. It is stated that excellent references can be supplied. Correspondence may be in Spanish or French.

Crockery, No. 18461.—The Bureau is in receipt of a letter stating that there is a demand in India for crockery. The demand appears to be urgent, and prompt attention should be given this opportunity.

Ice-making machinery, No. 18462.—A report from an American consular officer states that a firm of ice manufacturers in Spain desires to exchange their present machinery for more modern machines, having a total capacity of 100 tons per day, each compressor to have a daily output of from 5 to 20 tons. In stating terms it is necessary to give the weight of the machines in addition to other essential details of interest to the prospective importer. Correspondence should be in Spanish.

Electric ovens, No. 18463.—A commercial attaché informs the Bureau that a miller in Chile desires to purchase electric ovens capable of baking from 3,000 to 5,000 pounds of flour per day. It is requested that the operating charges be stated in replying to this opportunity. Instructions in Spanish would facilitate the transaction. Correspondence may be either in Spanish or English.

Machinery for paper boxes, No. 18464.—A report from an American consular officer in France states that a man desires to obtain catalogues, price lists, and detailed information relating to paper-box machinery. It is stated that the person interested will make a trip to this country, if necessary, although full information is desired first. Catalogues showing the type of machinery wanted and also samples of the boxes to be made may be examined at the Bureau or its branch offices. (Refer to File No. 65594.)

Wire, nails, iron pipe, etc., No. 18465.—The Bureau is in receipt of a letter stating that a firm in Cuba wishes to represent American manufacturers of commercial wire; fence wire; wire for bed springs; galvanized-iron sheets, both plain and corrugated; cut nails; wire nails; gas and water iron pipes; and hardware.

Kapok fiber, No. 18466.—An American consular officer in Canada reports that a firm is in the market for quantities of kapok fiber.

Stationery and office supplies, No. 18467.—A letter to the Bureau states that a firm in Sweden wishes to correspond with American manufacturers of pictorial post cards, stationery goods, and office supplies, such as paper binders, stamp racks, drawing pens, clips, staple presses, tag machines, pencils, and cheap cash registers, etc.

Boots, shoes, hardware, etc., No. 18468.—A commercial agent of the Bureau states that a representative of a firm in Dutch Guiana is now in this country for the purpose of securing an agency for American manufacturers of boots, shoes, hardware, ironmongers' ware, and agricultural machinery.

Sulphurous acid, No. 18469.—The Bureau is in receipt of a report from a commercial attaché stating that a company in Chile is in the market for sulphurous acid. Definite information and quotations are desired in the first communication in order to avoid delay. Cable address is forwarded.

Fertilizer, No. 18470.—An American consular officer in Denmark reports that a business man desires to establish commercial relations with American manufacturers of fertilizers. Bank references given. Further information may be obtained from the bureau or its branch offices. (Refer to file No. 65820.)

Medical thermometers, razors, safety pins, etc., No. 18471.—A letter to the Bureau states that a business man in Denmark wishes to correspond with American manufacturers of medical thermometers in nickel holsters; shirt-studs; medical instruments; razors, safety and otherwise; and safety pins.

General representation, No. 18472.—The Bureau is in receipt of a letter from a firm in the United States stating that a man in Greece is desirous of representing American exporters. He does not specify any particular line.

Hosiery, underwear, etc., No. 18473.—A commercial attaché reports that a man in France desires to represent American manufacturers of hosiery, underwear, and gloves for women. It is stated that he is familiar with American business methods.

Tools and chemicals, No. 18474.—The Bureau is in receipt of a communication stating that a government official in the Dutch East Indies requests information in regard to dealers in tools and chemicals for zincograph etchings and engravings. Catalogues would be appreciated.

Lumber and timber, No. 18475.—The bureau is in receipt of a communication from a business man in Brazil stating that he desires to receive names and addresses of American importers of lumber and timber.

Barley, malt, etc., No. 18476.—An American consular officer in Switzerland transmits the name and address of a firm in his district which desires to purchase large quantities of unroasted barley and malt to be used as a mixture and substitute for coffee; also molasses. Samples of these products are desired.

Automatic slot machines, No. 18477.—An American consular officer in Brazil reports that an insurance company is being organized to sell short-term accident insurance policies by means of automatic slot machines in railway stations. The machines must stamp date of insurance and cancel revenue stamps on policies. About 300 such machines are desired. Full details as to size of coupons, construction, prices, etc., are desired at once. Catalogues should be sent.

PRODUCTION OF GRAIN IN PERSIA.

[Vice Consul Ralph H. Bader, Teheran, Aug. 18.]

The great arid wastes of Persia would lead one to believe that the country does not produce sufficient grain to supply the needs of its population. Such, however, is not the case, and considerable quantities of grain are exported each year.

The principal grains grown are wheat, barley, and rice. Corn is planted in small quantities, but is only used for roasting ears. Oats and rye are seldom sown. Except along the Caspian coast, Persian agriculture is dependent almost entirely on irrigation.

The agricultural implements used in Persia are of the most primitive kind. Plows are made from forks of small trees with the addition of a share of iron. It is doubtful, however, whether the yield of grain would be greatly increased by using modern plows, as there is no sod and this crude implement seems to stir the soil fairly well.

Wheat is grown throughout Persia and considerable quantities are exported. The amount exported from the interior would be greater if transportation charges were not so high. The following statistics show the exports of wheat to various countries during the year ended March 20, 1914: India, \$186; Oman, \$23,811; Russia, \$7,014; Turkey, \$127,384; United Kingdom, \$52,584; total, \$210,979.

Barley is grown in great quantities in Persia, and is the principal animal food. It is also used for making bread in the poorer districts. Exports during the year ended March 20, 1914, were as follows: India, \$8,984; Oman, \$15,644; Russia, \$24,132; Turkey, \$13,650; United Kingdom, \$7,726; total, \$70,086.

Rice is grown along the Caspian Sea, where there are immense plantations, and also around Urumia, and in some districts in southwest Persia. It is one of the principal articles of diet. Exports during the year ended March 20, 1914, were as follows: India, \$232; Oman, \$13,317; Russia, \$3,605,853; Turkey, \$9,023; United Kingdom, \$575; total, \$3,629,000.

TRADE EXTENSION IN THE LEVANT.

Mr. J. Wiley Browne, executive secretary of the American Chamber of Commerce for the Levant, who has spent some time in the eastern part of the United States discussing with American manufacturers and exporters the methods of marketing their products in the Levant, states that he has been very successful in interesting American business men in this proposition. He expects to be in Cleveland, Ohio, October 2, where he will spend about a week interviewing local manufacturers. He will also visit Detroit, Chicago, and Cincinnati, spending about a week in each city. References to the work of the American Chamber of Commerce for the Levant have appeared frequently in previous issues of **COMMERCE REPORTS**.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

INCREASED GERMAN PRICES OF TAILORS' SUPPLIES.

[Consul Harry G. Seltzer, Breslau, Aug. 30.]

During the past few months the prices of cloth, linings, and other tailors' supplies have increased to an extent never before experienced in Germany. These increases are not altogether chargeable to the wholesalers, who act as middlemen between the manufacturers and merchant tailors, but to the various prohibitions against the manufacture of cotton and woolen goods. According to the most recent military proclamation, the manufacture of these goods after August 14 is forbidden entirely, except for military purposes. This refers especially to manufactures from the 1914 stocks of raw materials. The entire 1915 German wool crop has already been attached for military purposes and may be used only upon permission from the War Ministry.

Two Methods Adopted.

The wholesale dealers have generally adopted the plan of increasing prices gradually upon one article after another, according to the demands, but a large number have also adopted an average increase for all articles required in certain relative proportions in the clothing industries. The former plan has the advantage of inducing tailors to adopt substitute materials and thus equalize supplies. The latter system of average increases on the usual materials, however, will prove more satisfactory to the public. On account of the great diversity in quality it has been impracticable for the authorities to establish maximum prices. It is equally difficult, because of the numerous substitutes, to secure any reliable estimate of the increased prices on clothing since the opening of the war, but such increases will probably not exceed 20 to 25 per cent on men's and 25 to 35 per cent on women's garments.

An adding-machine company of St. Louis states that through the efforts of the American consulate general at Ottawa, Canada, it was enabled to secure satisfactory connections in that district.

GERMAN PIG-IRON MARKET.

[Translation of official report from Breslauer Zeitung by Consul Harry G. Seitzer, Breslau, Aug. 26.]

The firm condition of the German pig-iron market has again been emphasized by the extremely rapid sales for the third quarter which were taken up by the pig-iron syndicate in the middle of June. The demands of the consumers far exceeded the supplies which could be allowed for public sale.

Production Statistics.

Although production has gradually increased during the past months, yet there were no greater quantities for public sale this time than at the end of the second quarter. All orders for Army supplies, of course, received first attention. This refers particularly to cast iron, steel, and the various qualities of pig iron. The daily production in June, 1915, amounted to 32,438 tons of pig iron of all kinds, or 62½ per cent of the maximum production of 51,846 tons in May. In August, 1914, the daily production was only 18,957 tons; in December, 27,545 tons; in March, 30,272 tons; and in April, 31,288 tons. Of these amounts there were 23.4 per cent of cast iron (16.6 per cent last year); Bessemer pig iron, 1.2 per cent (1.7 per cent); Thomas pig iron, 56 per cent (65.9 per cent); cast steel, speigeleisen, and ferromanganese, 17 per cent (13.5 per cent); and puddle iron, 2.4 per cent (2.3 per cent last year). The production is divided among the various industrial districts as follows:

Districts.	1914	1915	Districts.	1914	1915
	<i>Per cent.</i>	<i>Per cent.</i>		<i>Per cent.</i>	<i>Per cent.</i>
Westphalia.....	43.6	43.0	Saar.....	7.0	6.9
Siegerland, Kreis Wetzlar, and Hesse-Nassau.....	4.8	6.7	South Germany and Thuringia.....	1.7	2.1
Silesia.....	5.4	7.3	Lorraine.....	18.5	15.3
North Germany.....	2.2	1.9	Luxemburg.....	14.1	12.5
Middle Germany.....	2.7	3.3	Total.....	100.0	100.0

The present prices are the highest ever recorded. Cast iron, Ia quality, was quoted at 94 to 96 marks (\$22.37 to \$22.85) per ton c. i. f. furnace; IIIa quality, 89 to 91 marks (\$21.18 to \$21.66); hematite pig iron, 115 to 117.50 marks (\$27.37 to \$27.96); cast steel, 89 to 102 marks (\$21.18 to \$24.28); puddle iron, Ia quality, 90 to 93 marks (\$21.42 to \$22.13); and speigeleisen, 98 to 100 marks (\$23.32 to \$23.80). The adjacent neutral countries pay still higher prices for the small quantities which are allowed to them upon their very urgent demands, but quality pig iron is strictly excluded from export. Large stocks do not exist either at the furnaces or in the hands of the consumers.

SOUTH AFRICA'S GOLD PRODUCTION IN JULY.

[Vice Consul John W. Dye, Cape Town, Aug. 12.]

The gold production of South Africa for July, 1914, totaled 769,355 ounces, valued at \$15,924,444, an increase of 15,075 ounces in quantity and \$316,001 in value over the June output. Of the total the Witwatersrand mines produced 742,510 ounces, valued at \$15,848,844. The output in this month was the largest since May, 1913.

OBSTACLES TO TRADE WITH PERSIA.

[Vice Consul Ralph H. Bader, Teheran, Aug. 17.]

Referring to Foreign Trade Opportunities Nos. 17203 and 17337 of June 10 and 23, respectively, the following is copy of a letter, dated August 14, from the steamship firm of Lynch Bros., of Teheran (head office No. 3 Salter's Hall Court, Cannon Street, London), in regard to the difficulty experienced in financing their business with American firms:

In our attempts to encourage American export trade with Persia we are met with a very considerable difficulty as regards the financing of the business at the present time.

The majority of manufacturers in the United States insist on receiving cash payment when shipping their goods to us from American ports. At present this condition, due to a dearth of credit owing to the war, practically precludes any Persian firms from doing business with us on account of the very strict terms imposed by the banks.

We venture to suggest that if a concession were made by the American manufacturers on this point the volume of business would be very much increased to the advantage of all concerned. We propose that Messrs. Lynch Bros. (Ltd.), Teheran, should receive a deposit of 20 per cent on the invoice value of the goods, and that on receipt of this intimation the manufacturers should send the goods to us to be delivered to the clients against payment of the invoice (balance) value and freight charges. On receiving payment for the invoice value of the goods as per the draft which the shipper would send to us for collection (and not negotiate through the banking houses), Messrs. Lynch Bros., Teheran, would remit by demand draft the sum due to the shippers, plus interest at the rate of 5 per cent from the date of shipment to the date of collection of the value of the goods on their arrival in Teheran.

It is, of course, understood that we hold ourselves responsible for the collection of the drafts, and in order that we may experience no difficulties with any of our clients, we should take especial care as to deciding with what Persian merchants we should be prepared to do business on behalf of American manufacturers on the lines which we have indicated above.

We shall be glad if you will draw the attention of the American Department of Commerce with a view to extending business on this basis to the proposals which we make that drafts should be sent to us for collection.

In this connection it should be noted that the reluctance of American exporters to extend credit has been one of the chief drawbacks to the promotion of American trade with Persia.

Details of the import trade of Persia were published in Supplement to COMMERCE REPORTS 57a, February 5, 1915.

NEW FIRE STATION AND EQUIPMENT FOR ESQUIMALT.

[Vice Consul Robert M. Newcomb, Victoria, British Columbia, Canada, Sept. 8.]

To secure fire apparatus of a modern type and to provide for the building of a hall for its accommodation the council of the Esquimalt municipality, a suburb of Victoria, will submit two by-laws to the ratepayers to raise \$30,000. One will sanction the purchase of a 6-cylinder chain-drive gasoline motor equipped with a triple combination pumper hose and chemical hose. It is estimated that this will cost, together with extra parts and the charges for floating the loan, \$15,000.

The other by-law will cover the cost of a structure large enough not only to house the fire department but also to serve as a municipal hall and police station. The expenditure involved in this project also is put at \$15,000. Address all communications to Municipal Engineer, Municipal Offices, Esquimalt Road, Victoria, British Columbia.

REDUCED SHIPMENTS OF MUSICAL INSTRUMENTS.

[Consular Agent W. Bruce Wallace, Markneukirchen, Germany, Aug. 13.]

The exports to the United States certified at the Markneukirchen consular agency for the year ending July 31, 1915, amounted to \$411,945, a decrease of \$395,788. The principal item of export is musical instruments, which decreased from \$559,196 to \$233,302.

All exports stopped at the outbreak of the war, but recommenced in September and gradually increased until the end of 1914.

The trade improvement continued during the first two months of 1915, February showing 90 per cent of the normal export. A decrease in exports began in March, the total for July being only \$12,200, about 20 per cent of the normal amount.

The exports to the Philippines decreased from \$3,633 to \$2,297. There were no exports to Porto Rico or Hawaii during the year of war, but \$558 to Hawaii during the preceding year.

Exports Compared with Those of Preceding Year.

The exports to the United States for the year ending July 31, compared with those of the preceding year, according to invoices certified at the American consular agency, were:

Articles.	1914	1915	Articles.	1914	1915
Antiques.....	\$16,881	\$5,973	Shells and mother-of-pearl manufactures.....	\$7,882	\$6,376
Catgut, unmanufactured (for ligatures).....	20,960	18,316	Toys (harmonicas).....	97,784	\$1,330
Hair, horse, for bows.....	5,927	2,384	All other articles.....	18,741	7,358
Musical instruments and parts of.....	559,196	233,302	Total.....	307,733	411,945
Strings of catgut.....	80,363	55,927			

[Articles on violin making in Markneukirchen were published in Consular and Trade Reports (daily or weekly) for June 3, 1912, Jan. 7, 1911, and May 7, 1910.]

ADDING MACHINES FOR DOMINICAN REPUBLIC.

[Vice Consul Robert K. Williams, Santo Domingo, Aug. 30.]

There are only 10 adding machines in the Dominican Republic, all of them being in Government offices, the office of the General Receiver of Dominican Customs, and the banks. A market would have to be created for the sale of adding machines here. Time is no object to the people, and as salaries are not high little attention is given to office system. Most business houses are small, and unless a very live salesman canvassed the island it is doubtful if more machines could be sold.

However, by providing easy payments and making it clear that the latest office appliance could be had on small monthly payments several machines might be sold.

Several merchants make trips to the United States and maintain connections there. If these merchants could be induced to buy adding machines, it would have a favorable effect on other merchants.

Although the best method to introduce adding machines would be by sending an experienced Spanish-speaking salesman, the address is forwarded of a commission firm in Santo Domingo which might be interested in handling adding machines.

[The name of the firm may be had from the Bureau of Foreign and Domestic Commerce. Refer to file 66273.]

BATH AND HEALTH RESORTS IN SILESIA.

[Consul Harry G. Seltzer, Breslau, Germany, Aug. 25.]

Although foreign patients and guests are noticeably absent from the splendid bath and health resorts along the mountainous frontier between Germany and Austria, the following figures for the second week in August would seem to indicate that these places are well patronized. Altheide reports 6,026 patients and 3,107 transient guests; Kudowa has 4,379 patients and 1,084 convalescents and transients; and Reinerz reports 4,191 patients and 2,212 convalescents and travelers.

Here in the depths of ancient forests covering the sides of historic mountains, with medieval castles and ruins, all rich in romantic tradition, with a variety of carbon and sulphur springs and streams, there is rest from the nerve-racking and heart-rending scenes of the battle field. Here the soldier finds fresh life and new inspiration. and here the heartbroken mother or lover has an opportunity to forget her sorrows and take new courage for the future. After the refreshing rains of the past weeks, nature seems to have surpassed herself in the wonderful color scheme of trees, fruits, and flowers which greet the traveler at every turn. Added to this are open-air patriotic concerts and other entertainments.

The curative powers of the waters have been widely advertised by returning patients, and the good wholesome food and balsamic air, together with expert medical advisers, have restored many to health and happiness. All of these places are within easy reach from Breslau on the German side and Prague on the Austrian side.

NEW FRENCH STEAMER SERVICE TO SOCIETY ISLANDS.

[Consul Thomas B. L. Layton, Tahiti, Society Islands, July 1.]

The arrival of the French steamship *Saint Louis* on June 30, inaugurating a new service between Bordeaux, France, and the Society Islands, via Philadelphia and the Panama Canal, aroused considerable interest in this port. The *Saint Louis* is one of a fleet of seven vessels recently built by the Compagnie Naval de l'Océanie, of Bordeaux, France. The service was first established by the steamer *Saint Andre*, which arrived at Papeete shortly after the outbreak of the war. On its return to France the vessel was requisitioned by the Government, together with three others belonging to the company. The *Saint Andre* had come through the Straits of Magellan, while the later vessels were to use the Panama Canal route. Should conditions in Europe permit the company intends to establish regular sailings from Bordeaux every two months.

The itinerary of the new line will be to Philadelphia, Colon, and the canal; Papeete, Tahiti; Noumea, New Caledonia; Sydney and Newcastle, Australia, and return via the same route. Freight will be accepted at Philadelphia for any of the last-mentioned ports. The vessels can accommodate a limited number of first-class (not more than 12 saloon), second-class, and steerage passengers. The fare from France to Papeete, for first cabin, is 1,400 francs (\$270.20); for second cabin, 900 francs (\$173.70). The fare from Philadelphia is not quoted. The freight rate is 150 francs a metric ton (\$28.95 per 2,204.6 pounds).

GROWTH AND CONDITION OF SWEDISH PRIVATE BANKS.

[Consul Emil Sauer, Göteborg, Aug. 21.]

A booklet entitled "Swedish Banking Companies, 1824-1913," was issued recently in English for the San Francisco Exposition by the Swedish Banks Association. It gives a brief history of the development of "enskilda" or unlimited liability banks and joint-stock banks in Sweden, including a brief synopsis of the bank act of June, 1911. Special mention is made of the rigid method of bank inspection and the thorough control the board of bank inspectors has.

[This book will be loaned to interested persons by the Bureau of Foreign and Domestic Commerce. Refer to file No. 65799.]

Remarkable Increase in Business of Banks.

The charts in this publication bring out in a striking manner the phenomenal increase in the business of the banks, particularly during the last 20 years. Discounted bills increased from \$20,536,304 in 1873 to \$142,169,980 in 1913. Loans increased from \$20,247,132 to \$332,961,324; cash credits, from \$13,923,136 to \$137,480,052; deposits at call, from \$8,351,952 to \$60,958,476; deposits at notice, from \$32,058,160 to \$392,494,576; capital, from \$17,646,192 to \$105,659,804; reserve fund, from \$3,364,276 to \$69,300,244; total balance sheet, from \$92,860,392 to \$763,294,284. Deposits per capita of the whole Swedish population increased from \$9.38 in 1873 to \$80.40 in 1913.

Particularly striking is a statement made in 1886 by A. O. Wallenberg, founder of the Stockholms Enskilda Bank, that no depositor in any of the enskilda banks had ever lost a cent during the 55 years they had been in existence. It is said that this assertion still holds good. Only one of the enskilda banks was compelled to liquidate, and in that case the creditors were paid in full and the stockholders received 18 per cent of the capital they had invested in the bank.

Condition of Banks Last Year.

The report of the bank inspectors on the Swedish private and joint-stock banks for 1914 was also published recently. According to this report there were in operation, at the beginning of 1914, 14 enskilda or private banks with unlimited liability, 34 joint-stock banks with a capital of at least \$268,000 (forming class 1), and 27 joint-stock banks with less than \$268,000 capital (forming class 2), a total of 75. During the year the number of joint-stock banks was reduced by eight, six being merged with other banks. One joint-stock bank of class 2 increased its capital to the extent that it entered class 1. At the end of the year, therefore, there were in operation 67 private banks.

During the year the number of bank offices increased from 640 to 659, giving 1 office for every 8,618 inhabitants (the population of Sweden in 1913 was 5,638,500). There were accordingly 592 branch banks at the end of the year, 62 of which were in the same localities as the head offices.

The total capital stock of the banks was reduced during the year by \$3,806,160, or 3.6 per cent, being at the end of the year \$101,902,212. The total reserve of the banks increased from \$64,576,836 to \$67,655,850, a gain of 4.7 per cent.

The total deposits with all the banks on giro account increased from \$45,307,280 on December 31, 1913, to \$58,799,507 on December

31, 1914, or 25.3 per cent; deposits on current account, from \$15,651,096 to \$18,746,007, or 19.7 per cent; deposits on savings account, from \$93,644,617 to \$99,577,347, or 6.3 per cent; deposits on capital account, from \$298,850,073 to \$305,663,597, or 2.2 per cent. The number of depositors on giro account increased during the same time from 66,487 to 70,223; on current account, from 3,713 to 5,100; on savings account, from 986,342 to 1,045,308; on capital account, from 361,007 to 363,093.

The Riksbank, Operated by the State.

The Riksbank or State Bank, owned and operated by the State, and the banks covered by the present report, usually designated as "private banks" to distinguish them from the Riksbank, do the commercial banking business of Sweden. The Riksbank has a capital of \$13,400,000, a reserve fund of \$3,350,000, and had a total balance sheet on December 31, 1914, of \$134,962,135.

AMERICAN STEEL OFFICE FITTINGS IN SOUTH AFRICA.

[Consul Edwin N. Gunsaulus, Johannesburg, Union of South Africa, Aug. 10.]

There has been a gradual and substantial growth in the sale of steel office fittings and fixtures of American manufacture in South Africa, particularly in the Johannesburg consular district, during the last two or three years, several large Government orders having been placed for this material for special uses during this period. Among the latest of this kind of equipment is that furnished for the plan room of the South African Railways headquarters offices in Johannesburg, a new wing having recently been added to the large stone structure housing these head offices of the South African Railway system.

The fittings for the proper storage of the drawings and survey books were manufactured by an art-metal construction company of Jamestown, N. Y., and erected by the Johannesburg agents of this company from designs and specifications furnished by the railway architect. These are made of the best mild steel, cold rolled and enameled, and comprise, among other fixtures, 800 drawers and over 600 pigeon holes. To this equipment are added sundry tables, counters, screens, etc., weighing in all 66,000 pounds. The scheme provides for additions to the fittings in the future, as occasion may require, to the extent of an additional 1,280 drawers and 500 pigeon holes, and it is anticipated that in the course of a very few years further installments of such additions will become necessary. Besides the above special equipment recent orders have been given by the South African Railways for other steel furniture for record and other rooms in the headquarters building here, where the general offices of this big Government railway system are located.

Among other important installations of metal fittings, in this consular district, of United States manufacture, also furnished by the Jamestown company, was the equipment of the new Pretoria post office and that placed in the Johannesburg new and costly town hall. All the above was furnished on special order and does not include heavy and frequent sales of stock steel furniture for office use, the demand for which is constantly increasing.

COMMERCIAL NOTES FROM SILESIA, GERMANY.

[Consul Harry G. Seltzer, Breslau, Aug. 13, 25, and 30.]

Advance in Prices of Men's Furnishings—Detachable Shirt Sleeves.

The Union of German Manufacturers of Men's Furnishings has decided on an advance in prices on the following articles: Collars will be advanced \$0.12 per dozen; cuffs, at least \$0.17 per dozen; detachable sleeves with cuffs, \$0.35 per dozen; shirt fronts and bosoms, from \$0.12 to \$0.24 per dozen; and shirts of all kinds, \$1.90 per dozen.

In this connection it may be interesting to note something about the detachable sleeves mentioned above. The idea has gained great popularity here. The shirts are fitted with half sleeves, extending about to the elbow, where they are hemmed and finished and one or two buttons are attached. The cuffs are also attached to a supplementary half sleeve, which extends from the wrist to the elbow, where it is fitted with one or more buttonholes to connect with the buttons on the other half. Two pairs of these half sleeves with cuffs are sold with each shirt. In warm weather or in work that requires the rolling up of sleeves the cuff with its half sleeve is detached altogether, thus providing an unusual degree of comfort. The worker can again attach his clean cuffs when going out on the streets, and thus effect a marked saving in laundry bills.

Prices of Margarine—Bicycles to Cost More.

The city magistrates of Breslau on August 13 announced an increase in the maximum price of margarine from 1.20 marks (\$0.28) to 1.30 marks (\$0.31) per pound of 500 grams. Dealers have always made a distinction between "ordinary" and "extra-fine table" margarine, but the authorities declare that such distinctions are impracticable. Inferior qualities, however, are sold at less than the maximum price.

The Union of German Bicycle Manufacturers and allied interests have decided on a further increase in prices. On June 1 an increase of 15 to 20 per cent had been announced.

Brewing Company Has Prosperous Year.

A preliminary report of the Oppeln Brewing & Dry Yeast Co. (Ltd.) indicates that the business year ending September 30, 1915, will be more satisfactory than the previous year. If no extraordinary and unforeseen circumstances arise, the management believes that the dividend will exceed that of last year (3 per cent).

The abnormal rise of prices for malt has had no serious effect upon the profits of the company, since they had carried over considerable stocks from the previous year. On the other hand, the rising prices of beer were very beneficial. The production of beer had to be reduced somewhat on account of the various Government restrictions, but all local customers could be satisfied because of the cutting off of exports. After normal conditions are again established, it is hoped that production may be increased.

The dry-yeast department showed less satisfactory conditions and smaller sales, on account of various prohibitions against the baking industry, but this was also partly counteracted by higher prices for yeast and alcohol.

Limitation of Hours of Labor in Textile Industries.

According to an ordinance of the Bundesrat dated August 12, 1915, the hours of labor in the spinning, weaving, and embroidery mills have been limited as follows:

(1) In industrial works manufacturing spun yarns, textile fabrics, embroidery cloth, or goods from cotton, wool, artificial wool, flax, jute, or hemp, the employment of workmen is permitted for not more than five days in every week. The number of working hours per day must not exceed those in effect in June, 1915, and in no case shall they exceed 10 hours, exclusive of rest periods. The provincial authorities may order a still further reduction of working hours and working days.

(2) The provincial authorities or their deputies, upon proper application therefor, may permit exceptions which are necessary for the public interest.

(3) A fine of 1,500 marks (\$357) or three months' imprisonment will be imposed upon manufacturers violating this ordinance or the orders proclaimed by the provincial authorities, as per sections 1 and 2.

(4) The ordinance goes into effect upon the day of its proclamation. The right of revocation is reserved to the Imperial Chancellor.

Velvet and Silk Goods.

According to an announcement in the Konfektionär, the Union of German Wholesalers of Velvet and Silk Goods has decided on a further increase of 5 per cent on all manufactured goods of these materials.

HALL OF FAME FOR BEUTHEN HEROES.

[Consul Harry G. Seltzer, Breslau, Germany, Aug. 25.]

In order to honor the memory of the fallen heroes of Beuthen, Upper Silesia, it is proposed to erect a memorial hall of fame in that city. It is to be a semicircular portico supported by six columns and beams with an attic and frieze. A flight of steps will form the approach while the rear will be closed. The structure will be 30 meters long, 12 meters high, and 5 meters (meter=3.28 feet) deep. The crowning feature of the building will be a huge iron cross, and the corner pieces will be ornamental. The interior walls will be regularly divided by pilasters between which memorial tablets of bronze and marble will be placed. The site has not yet been selected, but this together with all other arrangements has been entrusted to a committee of representative citizens of Beuthen.

HAWAII'S ENCIRCLING MOTOR ROAD COMPLETED.

[News Bureau of Hawaii Promotion Committee, Honolulu.]

The expenditure of \$55,000 upon the Keaumuku road, at the north end of the island of Hawaii, completes the magnificent scenic auto road clear around the entire island, providing a run of 240 miles of perfect surface. This circular trip is becoming increasingly popular with tourists, the marvelous tropical scenery and the glimpses of the fast-vanishing primitive native life combining with the excellent hotel accommodation to insure an ideal tour. The round journey can be made in two days if desired. Within this circle are four volcanoes, two extinct, one extremely active, and one intermittent crater.

THE SUGAR INDUSTRY OF CUBA.

[Consul Henry M. Wolcott, detailed as vice consul at Habana, Sept. 10.]

It is indeed fortunate for Cuba that the disastrous effects of the European conflict and other conditions upon the tobacco industry of the Republic are more than offset by the very material prosperity which the war has brought to the sugar industry, sugar and tobacco being the island's two great staples. The compensation is such that Cuba is to-day, generally speaking, in a most satisfactory economic condition.

The sugar production of the island in the present year should, with anything like normally favorable weather conditions, exceed greatly any previous crop, as the increase in cane plantings has been enormous. Lands in the western section of the Republic that have been idle for 20 years or more, as well as thousands of acres which have been devoted to yucca, bananas, tobacco, and other crops, are this year planted to cane. In the eastern Provinces of Camaguey and Oriente immense tracts of virgin lands have gone under the plow for cane plantings. [Willett & Gray's September 9th estimate of the 1914-15 Cuban sugar yield is 2,600,000 long tons, against a production of 2,597,732 long tons in 1913-14 and 2,428,537 tons in 1912-13.]

Planters and sugar manufacturers have perfect confidence in the continuance of satisfactory prices for a long period, though a few hold pessimistic views as to a possible reaction after the close of the war.

Exports of Sugar and Products.

The statistical section of the treasury department of Cuba has recently made public some interesting figures in connection with the sugar industry, and two of the numerous tables contained in its publication, "Industria Azucarera y sus Derivadas," are reproduced below. In the first table are given the exports of crude sugar from Cuba and the countries of destination in 1913 and 1914.

Sugar and products.	1913		1914	
	Quantity.	Value.	Quantity.	Value.
	<i>Tons.</i>		<i>Tons.</i>	
Crude sugar.....	2,411,188	\$122,388,062	2,454,334	\$130,413,709
United States.....	2,129,749	107,975,380	2,164,621	116,479,889
United Kingdom.....	240,870	12,598,817	231,541	10,910,415
France.....	12,077	514,155	26,532	1,433,290
Japan.....			19,233	962,194
Canada.....	20,528	1,088,003	6,724	303,359
Belgium.....	146	6,500	4,366	223,935
Netherlands.....	4,774	204,730	1,154	72,250
	<i>Gallons.</i>		<i>Gallons.</i>	
Molasses.....	60,982,650	2,027,596	84,652,997	2,445,500
United States.....	62,352,085	1,277,025	62,867,741	1,816,087

Netherlands.....	1,440,000	30,000	1,455,000	43,650
Alcohol.....	219,473	52,731	173,931	32,064
Aguardiente.....	1,935,546	365,340	1,845,976	325,896
Rum.....	387,556	96,351	309,336	67,676

Foreign Supplies—Nationality of Planters.

The influence of Cuba's sugar industry upon the island's import trade is seen in the large annual purchases of foreign sacks and

valuable machinery and apparatus. The imports of these during the past two years totaled:

Articles and sources.	1913	1914
Bags	\$3,029,053	\$3,700,916
United States.....	1,216,459	988,359
British India.....	1,002,479	1,117,863
United Kingdom.....	837,364	1,069,786
Mexico.....		\$2,892
Germany.....	4,220	\$3,006
Machinery and apparatus	\$5,526,036	\$2,761,594
United States.....	3,705,975	2,183,400
United Kingdom.....	921,365	280,375
Belgium.....	1,068,381	137,172
Germany.....	592,770	165,910
Netherlands.....	17,728	\$0,585
France.....	216,602	9,127

In connection with the sugar industry it is interesting to note the nationality of the owners of the various sugar estates and mills in the Republic. Of the 170 operating estates in the island 67 are owned by Cubans, 43 by Americans, 42 by Spaniards, and 18 by nationals of other countries.

FINANCING AMERICAN TRADE IN HONDURAS.

[Consul E. M. Lawton, Tegucigalpa, Aug. 4.]

In a number of reports on local trade conditions this consulate has discussed a project of developing American trade through agents here, financed by American capital; and especial reference has been made in these reports to the Banco de Comercio of this city, a semi-American institution, with whose officials the writer has had a number of interviews on the subject. The bank's manager, Mr. Ernesto Lazarus, finally went to the United States to secure, if possible, the necessary financial support, and has just returned, having completed all necessary arrangements.

This consulate is informed that the capital stock of the bank has been increased \$150,000, and an additional commercial credit has been secured of \$200,000 or more if necessary. Additional rooms adjoining the bank's quarters will be equipped at once as sample rooms in which to display American goods with a competent sales manager in charge. Necessary credit will be supplied by the bank to local merchants, and purchases will be made through the New York office.

Agencies will be accepted for all lines of imports, among which are the following: Groceries, canned goods, candles, condensed milk, soap, dry goods and notions, cotton piece goods, woolen goods, children's dresses, haberdashery, underwear, shoes, hats, lard, butter in tins, confectionery, wines and liquors, flour, corn, rice, beans, crockery, granite ware, jewelry, paints, varnish, shoe findings and leather, hardware, electrical goods, window glass, cigarettes, etc.

Catalogues and prices should be sent to the Banco de Comercio, Tegucigalpa, Honduras, Central America, and to the New York office of Parmelee & Co., New York City. Samples are also desired, as far as can be consistently supplied, of which both offices should receive a set. Correspondence may be in English, though catalogues, as far as possible, should also be in the Spanish language for more ready consideration by Spanish-speaking buyers.

GREAT LAKES TO ALASKA.

The contract for the construction of a new United States Coast and Geodetic Survey vessel has been awarded by Secretary of Commerce Redfield to the Manitowoc Shipbuilding & Dry Dock Co., located on Lake Michigan, at Manitowoc, Wis. The contract price was only \$189,000 for the bare hull and machinery, but the ultimate cost of the vessel fully equipped will be \$220,000.

The new vessel will be named the *Surveyor*, and will be used in surveying and charting the dangerous waters of Alaska and the Bering Sea in the summer and the coasts of Washington, Oregon, and California in the winter.

The *Surveyor* will be a steel steamer of about 1,000 tons displacement, with triple-expansion engines, and will use crude oil as fuel. She will accommodate 66 officers and men, and carry enough fuel and stores to stay at sea on a surveying cruise for about three months at a time without returning to her base of supplies.

According to the terms of the contract the *Surveyor* must be completed within one year, but Vice President West, of the Manitowoc company, who came to Washington to consult with E. Lester Jones, Superintendent of the United States Coast and Geodetic Survey, about the construction of the vessel, says she will be finished in much less time, possibly as early as the 1st of next August, which will leave ample time to take the vessel to the Atlantic coast before the close of navigation in the Great Lakes.

A remarkable feature of the award of this contract lies in the fact that a shipbuilding company located on Lake Michigan should build an ocean-going vessel destined for service in Alaska. This brings home the important commercial fact that after all the Great Lakes, extending far into the interior of the American Continent, are for all practical purposes a part of the Atlantic Ocean. It also speaks well for the enterprise of the shipbuilding company which is to build the vessel.

Secretary of Commerce Redfield is much pleased at the prospect of getting the new vessel ahead of time. He considers the charting of the waters of Alaska a vital part of the work of his department.

AMERICAN MACHINERY FOR RUSSIA AND FINLAND.

A native of Finland now residing in Chicago, together with three other Finns, is about to organize a company to handle American machinery in northern Russia and Finland at the close of the present European war. It is the intention of the firm to sell to the wholesale trade, through offices in Petrograd and Helsingfors, general machinery and factory equipment, paper-making machinery, motor vehicles and motors, water pipes and pumps, steam boilers, armatures, steam engines, electric dynamos and specialties, and machinists' tools. The promoter of the enterprise has asked the Chicago branch of the Bureau of Foreign and Domestic Commerce to place him in communication with manufacturers of the lines enumerated who wish representation on the Continent upon the cessation of hostilities. Interested American exporters are accordingly referred to that office for additional information.

FRUIT-CANNING METHODS IN CANADA IMPROVED.

[Consul Samuel C. Reat, Calgary, Alberta, Sept. 3.]

The principal canning factories in Canada are located on the Niagara Peninsula and in British Columbia, at Kelowna, Vernon, and Mission. The Government records show 82 establishments canning fruits and vegetables, with an annual valuation of \$5,971,082. There are 65 establishments that produce evaporated fruits, showing a valuation, according to the most recent report, of \$448,929.

The establishments both east and west are improving their methods, and the growers of fruit are also doing much better in Canada than formerly. With the present customs tariff against imports of canned and fresh fruits and the tendency of the Canadian product to improve, it is evident that this market will be more difficult for foreign products to enter than it has been during the past 10 or 15 years.

The Canadian customs tariff is as follows: Fruit in air-tight tins, 2½ cents per pound, weight of package included; jams, jellies, etc., 3½ cents per pound. Fresh fruits—oranges free; apples, 40 cents per barrel of 3 boxes; pears, 50 cents per hundred pounds; plums, 30 cents per bushel; prunes, 67 cents per hundred pounds; dates and figs, 55 cents per hundred pounds; dried fruits, such as prunes, currants, and raisins, two-thirds of a cent per pound; dried fruits, such as apples, apricots, etc., 25 per cent. A surtax of 7½ per cent ad valorem is charged on most imports into Canada, including all fruits except limes, in addition to the foregoing rates of duty.

[Lists of the principal importers of canned and fresh fruits in Alberta, Canada, may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65947.]

DETERMINES LOSS OF WEIGHT IN WOOL SCOURING.

A knowledge of the amount of shrinkage in weight produced when raw wool is scoured or cleaned is necessary in fixing the price to be paid for the raw wool, and to secure data on the subject the United States Bureau of Standards has recently conducted an investigation. The results will be published soon by the Bureau.

Raw wool may contain from 15 to 80 per cent of grease and dirt, according to the breed of sheep, the kind of food upon which the animal has lived, character of the country with reference to grass, sand, and stones and other influences.

The scope of the investigation was (1) to obtain some definite knowledge as to the shrinkage of some of the foreign wools imported into this country; (2) to ascertain the shrinkage variations in two samplings of the same fleece; and (3) the difference in shrinkage between two fleeces of the same breed of sheep which were grown in the same section of country.

Forty-nine fleeces of Australian and New Zealand wools were employed in the experiments, the results showing the yield of clean wool to be from 19.5 to 54 per cent.

This technologic paper, No. 57, will be ready for distribution about the 1st of December, and copies will be mailed to any interested person upon request to the Bureau of Standards, Washington, D. C.

DAIRY INDUSTRY IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Aug. 18.]

The dairy industry in New Zealand has become an important factor in the prosperity of the country, and the future seems bright. This is especially true in the North Island, where the climate is well adapted to the industry, since pasturage is good the year around, and it is never necessary to feed stock.

Number and Class of Factories.

At the close of the year ending with April 30, 1915, there were 167 public creameries, 330 public cheese factories, 64 private creameries, and 24 private cheese factories in operation in the Dominion, against 181 public creameries, 293 public cheese factories, 100 private creameries, and 23 private cheese factories at the same time in 1914. Most of the private dairies have fewer than 50 cows. These dairies are fitted up with up-to-date dairy machinery, and are modern in every way.

Production and Exportation of Butter and Cheese.

The following table gives the production and export of butter and cheese from the 497 public factories during the seasons ending with March 31, 1913, 1914, and 1915:

	Butter.			Cheese.		
	1913	1914	1915	1913	1914	1915
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Output.....	28,864	31,595	31,333	34,105	30,156	40,951
Export.....	18,457	19,743	20,857	31,709	27,119	30,730

The price of butter and cheese has advanced materially during the past year, until at present butter is quoted at wholesale at \$30 per hundredweight and cheese at \$18 per hundredweight, against \$25 per hundredweight for butter and \$15 per hundredweight for cheese on August 18, 1914.

Canada and the United States took 55,971 boxes (a box of butter contains 56 pounds) of butter during the 11 months ending July 31, 1915, against 176,599 boxes for a like period last year. During the same time in 1914-15 England took 697,740 boxes against 613,641 boxes for the same period last year. The export of cheese to Great Britain showed a slight decrease.

DEVELOPMENT OF HAWAIIAN BANANA INDUSTRY.

[News Bureau of Hawaii Promotion Committee, Honolulu.]

A marked increase in the demand for Hawaiian-grown bananas along the Pacific coast and as far east as Chicago has awakened a new industry, in which growers in the islands are reaping a substantial profit. W. A. Anderson, now representing the territorial marketing division on the mainland, reports one dealer alone has agreed to handle hundreds of bunches of the fruit on the arrival of each steamer from Honolulu. It is estimated that growers may net 70 cents a bunch. The Matson steamers *Lurline* and *Manoa* are said to be especially equipped to handle large consignments of bananas between the islands and the coast. The Bluefields banana is now one of the most successfully grown varieties in the islands.

CANADIAN LIFE-INSURANCE REPORTS.

[Consul Julius D. Dreher, Toronto, Sept. 11.]

At the Ninth Annual Convention of the Life Underwriters' Association of Canada, held in Toronto September 8-10, a good deal of attention was devoted to the discussion of the effects of alcoholic drinks. Dr. R. F. McMahon, addressing the convention regarding the medical examination of applicants for insurance, said:

The results shown by the medical actuarial investigation are in full accord with the experiences of the companies which made a separate classification of risks as abstainers and nonabstainers. The use of alcohol even in quantities that many consider moderate and harmless is shown to have a remarkable effect on longevity. Every fact points to the conclusion that those who have used alcohol to excess in the past, or use it even occasionally to excess at present, are not insurable as present risks.

Insurance Lectures in Universities.

The wide range of subjects discussed by the convention gives a good idea of its educational value not only to its members but to the public in general. The question of creating chairs for insurance in the universities was again considered at length by the meeting, while the subject of introducing insurance lectures was also discussed. It was the unanimous opinion of the convention that some definite step in this direction should be taken, and a suggestion was made that the underwriters should assume a portion of the cost of providing the lectures or paying the expenses of a chair, while the remaining portion should be borne by the various insurance companies.

Extent of Insurance Written.

Something of the great work that is being accomplished by life underwriters may be gathered from the following table showing the amount of the new insurance written in Canada each year since the formation of the Association: 1907, \$90,382,932; 1908, \$99,896,206; 1909, \$131,739,078; 1910, \$152,762,520; 1911, \$176,866,979; 1912, \$219,205,103; 1913, \$231,608,546; 1914, \$216,901,816. The decrease in new business in 1914 may be regarded as a result of the conditions produced by the war.

More than half of the net amount of life insurance in force in Canada in 1914 is on the books of the Canadian companies, as the following figures show: Canadian companies, \$794,520,923; British and colonial companies, \$35,565,112; United States companies, \$386,869,397. There are three Canadian companies having more than \$100,000,000 each of insurance in force in the Dominion.

COOPERATIVE BRANCH OFFICE OF THE BUREAU.

Under a special plan worked out by the Bureau of Foreign and Domestic Commerce, the Detroit Board of Commerce, Detroit, Mich., has now established a Foreign Trade Bureau and will become an active cooperative branch office. This work will be under the direct supervision of Mr. Robert F. Gifford, who has spent some time in the Bureau of Foreign and Domestic Commerce and its branch offices familiarizing himself with his new duties. This makes the fourth organization to take advantage of the offer of this bureau, the other cooperative branch offices being located at Cleveland, Cincinnati, and Los Angeles.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Sweaters, No. 18478.—A business man in Switzerland has requested an American consular officer to place him in communication with American manufacturers and exporters of a good grade of sweaters and sweater suits (not combined) of wool and half wool for children. The man desires to place an order valued at over \$10,000. Quotations should be made f. o. b. Bordeaux. Correspondence should be in German.

Caustic soda, No. 18479.—A soap manufacturer in Norway would like to receive quotations on caustic soda for use in making soap. The firm is also interested in potash, lye, and ammonia alkali soda ash. The firm is willing to pay cash. Correspondence may be in English. Bank references are given.

Fans, lanterns, lunch baskets, etc., No. 18480.—An American consular officer in Africa reports that a firm in his district desires to receive catalogues and full information relative to fans, lanterns, lunch baskets with compartments, sewing-machine and hand needles, toilet paper, and typewriter supplies. Prices and discounts should be stated. Correspondence may be in English.

General representation, No. 18481.—An American consular officer in Brazil reports that a firm of civil and electrical engineers has just begun business in his district and desires to be placed in communication with American exporters. The firm desires to make a specialty of the sale of American goods. Correspondence may be in English. Quotations should be made c. l. f. Santos.

Iron bars, No. 18482.—An importer in an insular possession informs an American consular officer that he desires to receive quotations on small shipments of round and flat iron bars. The following dimensions are in demand: Bars $\frac{1}{2}$ inch, round $\frac{1}{2}$ inch, and flat $1\frac{1}{2}$ by $\frac{1}{2}$ inches. Correspondence should be in Portuguese.

Hardware, etc., No. 18483.—A business man in India writes an American consular officer that he desires to establish commercial relations with American manufacturers of mill supplies, cotton-gin supplies, and all lines of hardware. Correspondence may be in English.

Chemicals, cement, fruits, furniture, etc., No. 18484.—An American consular officer in Brazil writes that a firm in his district desires to communicate with American manufacturers and exporters of acetic acid, alkali, bicarbonate of soda, caustic soda, cement, chemicals, citric acid, coal, codfish, copper in sheets, cottonseed oil, cream of tartar, dried fruits, hops, iron and steel, leather for boots and furniture, malt, muriatic acid, phosphates, rosin, sulphuric acid, tartaric acid, tiles (glazed), tin, tin plates, tobacco, turpentine, and wire (fencing and barbed). Correspondence should be in Portuguese. Weights and measures should be stated in the metric system. It is explained that extreme care should be taken in packing the goods.

Piece goods, No. 18485.—A wholesale and retail dealer in Africa advises an American consular officer that he wishes to receive catalogues with full information relative to piece goods of all kinds, particularly cotton goods. Samples should be sent. Correspondence may be in English.

Paints, varnish, and tin foil, No. 18486.—An American consular officer in an insular possession writes that a business man in his district desires to purchase $1\frac{1}{2}$ tons of brewer's pitch, a quantity of varnish, and about 200 pounds of tin foil. Prices and samples should be sent. Correspondence and descriptive literature may be in English.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

UNFAIR COMPETITION.

Many inquiries have been received by the Bureau of Foreign and Domestic Commerce as to the prevention of unfair foreign competition against the new American industries established during the war. In view of this the Secretary of Commerce has addressed the following letter to the chief of this Bureau:

If the question arises as to the attitude of the Department of Commerce toward what is called "dumping" after the war shall end, you may say that I shall recommend in my annual report that unfair competition from abroad shall not be permitted to injure a legitimate American industry any more than it is permitted to do so in our domestic field. Especially I shall oppose action on the part of any foreign monopoly toward controlling the American market by unfair competition in an attempt to injure or destroy an American industry. There is no doubt in my mind that this should be done. The more serious question to which consideration is being given is as to the method of doing it. Various plans have been proposed, some of which seem to permit reactions which are possibly undesirable. I am considering the methods used in different countries, with a frank preference for such as have nothing to do with tariffs or duties. I should be very glad to receive suggestions from practical commercial men as to the most efficient means of detecting and preventing this unfair competition.

You may be quite sure of my earnest purpose to provide, so far as it lies in my power to do so, that American industries shall not suffer from a type of unfair competition at the hands of foreign producers which would be forbidden if it took place at the hands of American producers.

There is no reason why you should not make known this expression of my views.

Yours, very truly,

WILLIAM C. REDFIELD.

Dr. E. E. PRATT,

Bureau of Foreign and Domestic Commerce,

409 Custom House, New York, N. Y.

CENSUS BUREAU'S EXHIBIT AT THE EXPOSITION.

One of the interesting exhibits at the Panama-Pacific Exposition is that of the Federal Census Bureau. Its most prominent feature is the display of automatic tabulating machinery, but statistical publications, some of which are of great historical value, together with maps, charts, diagrams, etc., are also attracting much attention. Commenting on this exhibit, the San Francisco Daily Journal of Commerce says in a recent issue:

Aside from the general interest which the exhibit of the United States Census Bureau in the Palace of Liberal Arts is arousing is the particular interest it has for business men and manufacturers. Complete statistics on population, agriculture, manufactures, forests, mines and quarries, mortality, and finance are shown in the various publications of the bureau, together with reports by States and counties and an analysis of the figures secured. One feature of the exhibit is attracting the attention of foreign Governments. This is the automatic tabulating machine (of which there are three on exhibition) used in the compiling of vital statistics. These machines tabulate and print results at the rate of 150,000 cards per day. They are owned and manufactured by the Government. Maps and charts showing the census figures for California are displayed, and also a series of charts illustrating the registration areas for death throughout the country. To become a registration area a State must prove that it reports at least 90 per cent of its deaths. The present registration area comprises about 70 per cent of the United States.

The genealogical value of the census records is not generally appreciated. They contain a return of the whole number of persons within the several districts of the United States in 1790, and the first census, taken in the same year, contains the heads of families of 12 of the Eastern and Southern States, together with the members of the families, free or slave. Some of these original records for that period are shown in cases. William Lane Austin, of the Washington office, is in charge of the exhibit.

OLIVE CROP IN SOUTHERN FRANCE.

[Consul William Dulany Hunter, Nice, Aug. 27.]

The outlook for next spring's olive crop in this consular district is unsatisfactory. The reasons given by several of the largest olive-oil refiners in this city are that after a year during which the olive trees have produced large quantities of fruit, as was the case last year, the yield the following year is usually poor and that field hands are scarce, the consequence of which is that the trees have not in the last year received the necessary culture and care that they require. Due to these facts, the olives are not juicy and are at present little developed, and the growers do not believe that the quality of the oil produced from next year's olive crop will be a good one.

CONDITION OF THE EGYPTIAN COTTON CROP.

[Consul Arthur Garrels, Alexandria, Egypt, Sept. 4, 1915; data taken from Bulletin of Alexandria General Produce Association for Aug., 1915.]

Weather favorable. Water supply sufficient. Slight damage from common boll worm whose ravages are over. Extent of pink-boll worm menace still undefined. This parasite has spread generally over the whole country. Bolls opening well. Picking sporadically begun will be general between 10th and 20th of September, some 10 or 15 days earlier than last year. Crop prospects satisfactory on the whole.

CRISIS IN SHIPPING ON THE PACIFIC.

[Consul General George E. Anderson, Hongkong, Aug. 20.]

The sale of the vessels of the Pacific Mail Steamship Co. engaged in trans-Pacific service to the Atlantic Transport Co. has precipitated a crisis in the carrying trade of the Far East as related to trans-Pacific service which is of the greatest possible practical importance to American exporters and importers interested in Far Eastern trade.

As is generally known, the sale includes all American vessels of the trans-Pacific fleet of this company—the *Mongolia*, of 27,000 tons displacement; the *Manchuria*, of 27,000 tons displacement; the *Korea*, of 18,000 tons displacement; the *Siberia*, of 18,000 tons displacement; and the *China*, of 10,200 tons displacement. The line has two other vessels in the service—the *Persia*, of 9,000 tons displacement, which is British built and is operated under the British flag, and the *Nile*, formerly the property of the Royal Mail Steamship Co., of 11,000 tons displacement, and also operated under the British flag. So far only the vessels operated under the American flag have been sold. The *Persia*, it is understood, is offered for sale, and is scheduled for only one more trip. The *Nile* has been engaged in transport service for the British Government since the beginning of the war, and will not be available for any nongovernmental service until the war is over.

Closing Up Business.

The company has prepared to wind up its business in this part of the world completely. Orders have been sent general agents to close up their own agencies as well as all subagencies in all parts of the Far East. The personnel of the staffs in various offices have been given notice of nonemployment and the Americans employed in various offices have been given similar notice, with an indication of what steamers they are to take for their return to the United States and notice of no employment when they reach the United States. In Hongkong the offices of the company are to be closed and the lease of an exceptionally favorable office location has been taken over by the Nippon Yusen Kaisha, a competing Japanese company. All the extra parts, heavy gear, and all parts and belongings to the various ships of the company retained in dockyards here, where most of the repair work on the vessels usually has been done since this was the oriental terminus of the line, have been ordered returned to the United States, and all warehouses, launches, lighters, and other property have been ordered sold. The business of the company, in short, is being wound up immediately.

While it is not competent to discuss in a consular report the causes or circumstances in the United States which have brought about the winding up of the business of this company on the Pacific, there are certain practical and immediate results of the change which must be taken into consideration by American business men interested in the trade of the Orient in any way or to any degree, and, indeed, by all interests concerned in American trade abroad in general.

Former Trans-Pacific Service.

In ordinary years immediately previous to the war there has been available for trans-Pacific transportation of freight a total ton-

nage of at least 936,000 tons actual carrying capacity in vessels bound from the Far East to San Francisco or to Puget Sound ports. The service included one steamer per month of the Royal Mail Steamship Co. and Glen Line, one steamer per month of the Hamburg-American Line, one steamer per month of the Blue Funnel Line, two steamers per month of the Nippon Yusen Kaisha, two steamers per month of the Osaka Shosen Kaisha, one sailing each three weeks by the Canadian Pacific Steamship Line, four sailings per year each by the Great Northern Steamship Co. and the Dollar Line, and one sailing per week by steamers of the Pacific Mail Steamship Co. and the Toyo Kisen Kaisha on joint schedule, say, 13 steamers per month or 156 per year, of which the Pacific Mail furnished 35.

The actual carrying capacity of the Pacific Mail steamers, excluding the *Nile*, was 44,830 tons, sailing five times a year, or a total of 225,150 tons, or an average of 7,472 tons of cargo space per vessel. This space could be, and after the war actually was, increased by the use of certain coal bunkers to 50,880 tons, or 254,150 tons per year. The Pacific Mail steamers, however, were much above the average in size, the rate of 6,000 tons per sailing or 936,000 per year probably being a fair estimate for all steamers.

Changes Due to War.

After the outbreak of the war the lines operating across the Pacific included only the Blue Funnel Line, one sailing per month; the Nippon Yusen Kaisha, two sailings per month; the Osaka Shosen Kaisha, one sailing per month; and all others together about one sailing each two months, with the one sailing per week of the Pacific Mail and Toyo Kisen Kaisha, say nine and one-half sailings per month, or about 684,000 tons per year.

The actual freight moving in ordinary years, of course, has been considerably less than this available tonnage, leaving unoccupied or unused a considerable portion of this total of the available tonnage. With the advent of the war in Europe and the reduction of available tonnage, however, came a different situation. While the shipment of goods from Asia to America fell off materially the tonnage available for the transportation of such goods fell off in much greater proportion. Ever since the beginning of the war freight has been offered in greater quantity than ships could carry.

In spite of special efforts to overcome this condition, freight has piled up on the docks in oriental ports and in American ports as well until at times as much as from 75,000 to 80,000 tons of freight was offered in ports of the Far East without vessels to accept it. While, with summer dullness which has been greater than usual this year because of generally depressed trade all over the world this surplus of freight has been greatly reduced and tonnage at the present time from Asia to America may be considered adequate for immediate needs, the revival of business in September and October will bring about another freight shortage if all the vessels now in service are kept on the Pacific.

This shortage will be serious and will materially affect American trade to and from the Orient. Already the freight situation has been unfavorable to American trade, particularly the export of American steel and oil products and other heavy goods. Trade in American steel has become exceptionally brisk because of the war

in Europe. Many lines of American trade in this part of the world which have been built up after years of effort and careful nursing depend very largely upon prompt communication and regular steamship service. Other lines of trade which the United States has commenced to enter with notable success are hampered and American interests restricted in their business by the lack of freight facilities and the high price of freights due to inadequate tonnage.

What Further Loss Means.

To this shortage, already anticipated and already the subject of complaint and adjustment, must now be added the loss of the 30 sailings per year, at present realized, of the largest and best-equipped line on the Pacific—a loss of at least 224,150 tons of actual carrying capacity, without considering the possible expansion of which it is capable, reducing the total available tonnage across the Pacific to about half what it has been in normal times and reducing the number of sailings of mail and passenger vessels about half.

The Pacific Mail Co.'s ships actually carried cargo from Hong-kong alone between January 1 and June 30 of the present year to the amount of 53,386 measured tons and from all Eastern ports took at least 120,000 tons of actual cargo. In that time it had at least 132,490 tons of space available for service which could be materially increased if not required for passengers—a margin between space available and actual cargo which is very narrow in the practical operation of a line of ships.

What therefore was a serious shortage of available ships before, now becomes a direct and positive menace to all American trade in the Pacific. The situation presented, in fact, is an impossible one.

Passenger Facilities.

In the way of passenger service the situation is even more serious. The Nippon Yusen Kaisha and the Osaka Shosen Kaisha carry a few intermediate class passengers on the runs to Puget Sound ports, but their services are capable of little if any expansion, for the passenger accommodations on their ships are comparatively small and as a result of comparatively cheap rates they have usually been filled for the past two years or so. The chief passenger traffic at present has been by way of San Francisco, the Toyo Kisen Kaisha and the Pacific Mail Co. between them normally maintaining a joint schedule of 11 ships including 4 ships affording intermediate service.

The passenger accommodations on these ships are usually fully taken up at all seasons of the year. In the spring and summer season going from Asia to America, and in the fall and winter season returning from America to Asia passengers have great difficulty in securing accommodations on these ships and at times find it necessary to wait their turn to be carried across the Pacific. With the withdrawal of the Pacific mail vessels from this service 7 out of 11 ships are thus taken from service. The ships left in the service afford accommodations for from one-third to one-half of the passenger business now offering. It is probable that these ships will be speeded up and their trips accelerated, but the fact remains that only about one-half the accommodations necessary to care for the ordinary passenger traffic on the Pacific Ocean will now be available.

The general situation precipitated by the withdrawal of the Pacific mail service is accentuated by the fact that the Canadian Pacific

steamers are not now in service since they have been taken over during the war by the British Government and since also a considerable traffic by way of the United States between Asia and Europe has been built up as a result of interference with passenger services between Europe and the Far East by way of the Suez Canal.

Japanese Lines Naturally Conserve Japanese Business.

In the ordinary course of shipping affairs the loss of one company in such a trade would soon be made up by other companies placing ships on the run and taking up the business offered. Unfortunately there is little or no relief in sight in the present instance. During the acute tonnage shortage of the past spring the Japanese Government ordered the Japanese lines, all of which enjoy substantial not to say large subsidies from the Japanese Government, to take freight during certain months from Japanese ports only, thus serving Japanese industries and Japanese shippers in preference to other shippers in the Far East, and of course without any reference to American interests in the premises. The Conference lines were compelled to make such arrangements as were possible for taking up freight from Hongkong, Manila, Formosa, and other ports thus shut out of service from Japanese ships, and to do so proposed to secure additional vessels by charter. No vessels were chartered for the simple reason that none were to be had for charter at that time. The demand for tonnage generally is fully as great now as it was at that time and in the coming autumn will be greater.

It does not appear, therefore, whence additional tonnage for the trans-Pacific run is to come, nor are present services capable of much expansion. The trade at the present time, aside from the vessels of the Pacific Mail Co., is served by the Toyo Kisen Kaisha, operating four vessels as follows: The *Shinyo Maru*, of 22,000 tons displacement; the *Tenyo Maru*, of 22,000 tons displacement; the *Chiyo Maru*, of 22,000 tons displacement; and the *Nippon Maru*, of 11,000 tons displacement. The *Kiyo Maru* and the *Anyo Maru*, of 18,500 tons displacement each and engaged in the South American trade, also recently commenced to enter at San Pedro (Los Angeles).

The trade is also served by the Nippon Yusen Kaisha, which operates on this run the *Shidzuka Maru*, the *Awa Maru*, the *Tamba Maru*, the *Yokohama Maru*, the *Aki Maru*, and the *Sado Maru*, all of about 12,500 tons displacement. The Nippon Yusen Kaisha runs its vessels to Seattle. The Osaka Shosen Kaisha operates a line to Tacoma and Seattle, including the *Panama Maru*, the *Seattle Maru*, the *Mexico Maru*, the *Chicago Maru*, the *Canada Maru*, and the *Tacoma Maru*, all of 12,000 tons displacement. Two new vessels, the *Manila Maru* and the *Hawaii Maru*, of 18,000 tons displacement, are now being put into this service.

Other Services.

Aside from these Japanese lines, all of which are heavily subsidized, the Blue Funnel Line, operated by Alfred Holt & Co., of Liverpool, has a trans-Pacific service of one 12,000-ton (average) vessel a month on a system including services from Liverpool to Puget Sound as well as to Australia.

The Dollar Line has also been employing four small boats in trans-Pacific service until recently. One of these ships was recently,

sold. The other vessels have been taken off of the run to the United States and are now serving between Hongkong and Canadian ports only.

The Great Northern Steamship Co. maintains on the trans-Pacific run one steamer, the *Minnesota*, which is of 27,500 tons gross register and the largest ship on the Pacific Ocean, though its sailings in the past year have been very irregular. The routing of this steamer has been changed, and the understanding among shipping men here is that its service will be to Canadian ports only.

Japanese Lines Have Good Field.

Of these lines now in the service the only expansion probable is in Japanese lines which are, in fact, making every effort to seize the trade of this American company as it relinquishes its business. The Toyo Kisen Kaisha, operating to San Francisco, has a fleet of fine ships which it can speed up considerably and increase the number of sailings. The Nippon Yusen Kaisha has been increasing its fleet steadily for years, and has especially large and fine ships now on the ways which can be pushed into the trans-Pacific trade. The Osaka Shosen Kaisha also is prepared to augment and improve its service. All these lines are heavily subsidized by the Japanese Government and enjoy other governmental favors. Inquiries in the trade are being made by other shipping interests, such as those represented in the Far East by Jardine Matheson & Co. and Indian shipping and allied interests, but at the present time no practical result has been forthcoming.

If, when the strain on freight facilities actually is realized this autumn, the Japanese Government adopts the same policy with respect to Japanese cargo and Japanese products it adopted the past spring and summer, namely, to confine the cargo space offerings in all ships of Japanese lines to Japanese ports until such ports are fully served, there will be no cargo whatever taken to the west coast of the United States from Hongkong and South China generally from the Philippines, North China, or from India and the East Indies by usual transshipment at Hongkong. In other words, the entire trade in Chinese products in the more valuable cargoes from the Philippines and the gunny trade of India to the west coast will be paralyzed.

Effect on American Trade.

While the general situation is bad enough in that the only American steamship line operating on the Pacific has been driven from the ocean after many years of service (the Pacific Mail Co. was the oldest line operating on the Pacific Ocean) with all the loss of prestige to American trade which such change implies, and while it is disconcerting, to say the least, that business built up after long years of service by an American company is being taken by Japanese competitors serving under heavy subsidies from the Japanese Government, and with every possible assistance in other ways from such Government, the chief fact to be considered at the immediate moment is that there is not now, and so far as may be seen at present, neither is there likely to be soon, sufficient vessels to carry American and other passengers between Asia and the United States, to carry American freight to its Eastern markets, or carry Asiatic raw materials to

American manufacturers, while postal service and all similar facilities of trade depending upon rapid and regular communication between the United States and the Far East can but be irregular and precarious for an indefinite period in the future. Whatever may be the cause or occasion for recent changes the actual result of such changes has been the placing of American trade and American interests in the Far East in the greatest jeopardy.

FOREIGN TRADE OF INDIA FOR JUNE.

[Consul James Oliver Laing, Karachi, Aug. 10.]

Both export and import trade in India declined in June, as compared with June of last year. According to the June number, just published, of the monthly accounts relating to the sea-borne trade and navigation of British India, the combined export and import trade amounted to \$92,613,392.

The total for June, 1914, was \$111,977,308, and for June, 1913, it was \$97,710,360. The imports for June, 1915, were \$33,749,189, and the exports were \$58,864,203. The latter figure includes \$10,516,675, the value of wheat export on Government account.

Imports of treasure in June of these years were, 1915, \$4,369,687; 1914, \$7,997,137; 1913, \$11,327,230; exports, 1915, \$228,240; 1914, \$1,717,901; 1913, \$3,415,739.

The principal items in imports on which there were increases in June over the amounts for June, 1914, were: Sugar, 16 D. S. and above, \$1,582,858; cotton piece goods (grey), \$482,192; cement, \$112,629; salt, \$116,600; chemicals, \$97,540. Some of the decreases in the same period were: Carriages and wagons (railway), \$1,202,417; railway materials for construction, \$1,133,230; cotton piece goods (colored), \$1,496,905; wrought copper, \$932,187; cotton yarn, \$386,206; hardware, \$412,296; textile machinery, \$303,539; iron or steel sheets and plates, \$376,509; steel bars, \$244,481.

The chief increases in exports were: Wheat (private and Government), \$6,333,229; hides, \$616,647; raw wool, \$508,696; jute, gunny bags, \$424,089; jute, gunny cloth, \$342,139; black tea, 341,926; rice, \$271,468. Decreases recorded were: Raw Cotton, \$14,469,473; raw jute, \$1,042,062; linseed, \$902,007; cotton twist and yarn, \$628,096; coffee, \$560,258.

GERMAN LEAGUE OF TYPEWRITER DEALERS.

[Consul Talbot J. Albert, Brunswick, Aug. 16.]

The Brunswick Landeszeitung of August 8, 1915, reports that the German dealers in typewriters have formed a league. A large number have already joined it, and an effort will be made to include all typewriter dealers in Germany and in Austria-Hungary.

The object of the league is to bring about a greater recognition of German typewriters as objects of German skill and industry. It will strive to obtain for them the position that it is claimed they merit by reason of the excellent workmanship and accomplishments of the German machines. The league does not purpose to exclude foreign products, but to protect the domestic article, which, it is asserted, is not only of equal worth but in many respects superior to the imported. The headquarters of the league is in Berlin, S. W., Zimmerstrasse 92-94.

RECORD PRODUCTION OF CEREALS IN PACIFIC NORTHWEST.

[Commercial Agent W. B. Henderson, Seattle, Sept. 16.]

Authentic data recently compiled shows that the Pacific Northwest harvested this year 119,200,000 bushels of grain, compared with 111,400,000 bushels for a year ago. This is the greatest grain crop ever grown in the Northwest.

The harvesting is practically completed for everything except corn, and definite figures on the crops, which are now available, furnish a surprise to the estimators, especially as to the wheat crop. In July the estimates of that cereal production was 66,000,000 bushels, considered then by some to be too high, while the actual harvest shows a total yield of 69,300,000 bushels in the three States of Washington, Oregon, and Idaho, or 3,300,000 bushels larger than the July estimate.

With its immense acreage of both winter and spring wheat sowing, Washington leads with a total for the wheat crop of 39,000,000 bushels. Oregon produced 19,000,000 bushels and Idaho 11,300,000 bushels.

Oats and corn showed increases in this section over a year ago, while the barley crop was slightly below the production of 1914. The increase in the production of oats over last year amounted to 2,100,000 bushels and that of corn over 400,000 bushels.

The total productions of cereals by States of the Northwest were as follows:

	Wheat.	Oats.	Corn.	Barley.	Total, 1915.
	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
Washington	39,000,000	11,200,000	7,000,000	1,200,000	58,400,000
Oregon	19,000,000	14,000,000	800,000	4,000,000	37,800,000
Idaho	11,300,000	8,000,000	700,000	3,000,000	23,000,000
Total, 1915	69,300,000	33,200,000	8,500,000	8,200,000	119,200,000
Total, 1914	61,000,000	31,100,000	8,100,000	17,000,000	111,400,000

In the case of corn estimates have to be taken, as the crop is not yet entirely harvested. While the production of this grain is about 500,000 bushels greater than last year, the acreage is much smaller than 1914; hence the yield per acre is much greater.

AMERICAN TRADE PUBLICATIONS AT SHANGHAI.

[Consul General Thomas Sammons, Shanghai, China.]

It is found, upon inquiry among American business houses here, that in many instances American trade-expansion literature is neither filed, classified, nor kept in such shape as to be available for reference purposes. In numerous cases printed literature of this kind is not treated at all seriously and is put aside in out-of-the-way places. A demand exists, however, for an up-to-date repository for all American publications of this kind, and it is the aim of the Shanghai consulate general, with the hearty cooperation of the American commercial attaché, Julian H. Arnold, not only to assemble but systematically to file and index all catalogues, etc., that either are sent direct to this office or may be transmitted by American concerns here in order to insure their safekeeping and ready availability for the securing of information.

SEAMEN'S LAW REQUIREMENTS ON THE GREAT LAKES.

In a communication to the head of the Steamboat Inspection Service Secretary of Commerce William C. Redfield points to the special problem faced by the inspectors in enforcing the seamen's law on the Great Lakes. The question of good faith is to be borne in mind in dealing with the vessel owners, and the Supervising Inspector General is instructed that because of the limited time before the close of navigation on those waters and the necessity for promptly transporting the enormous crops of the Northwest the law should be enforced without suspending the traffic. Proper consideration, it is promised, will be accorded those who in good faith do the utmost practicable to be ready and are striving to comply when the law takes effect. The communication in full is:

My attention is called to the fact that the requirements of the seamen's law upon the Great Lakes take effect but 28 days before the closing of navigation upon those waters, and that upon the one hand there may be cases in which it will be impracticable to make the necessary changes upon the vessels to provide the accommodations which will be necessary under the new law while they are continuously in active service during the present fall, and, upon the other hand, that the continued and incessant use of all available vessels will be necessary as late in the season as possible in order to transport the enormous crops of the Northwest for the prompt movement of which the rail facilities of the country may for a time be insufficient.

The problem which your force of inspectors must face during November will be that of enforcing the law without, upon the one hand, suspending the traffic or, upon the other, permitting themselves to be blinded by the temporizing methods of any who may wish to save present expense in the possible thought that changes in the law may be secured during the coming winter. Both of these extremes are to be carefully avoided.

The question may in part resolve itself into one of good faith. The vessel owners have had ample notice and are obligated to do all possible to be ready to meet the law fully when it takes effect. Your inspectors should therefore look to all to obey the law and, in cases where that obedience may not be complete, will report the facts which will be considered by the department on the particular merits of each case. The failure on the part of a vessel owner to take every practicable step toward preparedness for complying with the law will not be considered an excuse for the lack of such compliance. Those, however, who in good faith do the utmost practicable to be ready and who, when the law takes effect, are striving to comply with it will be given the consideration that the facts may warrant when considering penalties for noncompliance.

CABLEGRAM REGULATIONS IN PORTUGAL.

[Consul General W. L. Lowrie, Lisbon, Aug. 24.]

Cablegrams in code are now accepted by the Portuguese Post and Telegraph Service for the French colonies and Brazil, the use of the following codes being permitted:

For the French colonies—Az; A B C, fifth edition; Scotts, tenth edition; Western Union Code, including the Universal edition; Lieber's Code; Bentley's Complete Phrase Code, excepting the separate supplements relative to mines and oils; Myer's Atlantic Cotton Code, thirty-ninth edition; Broomshall's Imperial Code, excepting the special edition relative to rubber.

For Brazil—all of the above and the Ribeiro Code, by way of St. Vincent, Cape Verde, only.

Otherwise no cablegrams are accepted unless written in French or English in clear language with complete address and signature. All cables must bear the indorsement "A risco da guerra," and are accepted only at the risk of the sender.

FOREIGN TRADE IN COPPER.

American imports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan during the week ended September 18 were:

Countries.	Ore, matte, and regulus (copper contents).		Pigs, ingots, bars, plates, and old, etc.	
	Pounds.	Value.	Pounds.	Value.
Canada.....	660,603	\$47,882	1,860,196	\$241,246
Panama.....	66,505	10,641		
Chile.....			521,800	83,488
Peru.....	29,079	1,282	360,306	41,289
Japan.....			234,717	42,468
Total.....	656,187	59,805	2,463,079	408,488

The exports were:

Countries.		Pigs, ingots, bars, plates, and old, etc.	Countries.		Pigs, ingots, bars, plates, and old, etc.
	Pounds.	Value.		Pounds.	Value.
France.....	4,158,697	\$769,280	Argentina.....	8,781	900
Italy.....	4,092,010	785,407	Brazil.....	48,743	10,878
Netherlands.....	257,286	56,840	Colombia.....	781	147

Scotland.....	112,017	23,574	Russia in Asia.....	1,326	280
Cuba.....	8,892	1,638	British Africa.....	8,290	1,158
Canada.....	11,187	2,272			
Panama.....	3,855	770	Total.....	13,496,069	2,578,709

STATISTICS OF AMERICAN FOREIGN TRADE.

Imports, duties collected, and exports for the week ended September 25, 1915, at the 13 principal customs districts of the United States were:

Districts.	Imports.	Duties collected	Exports.
Georgia (Savannah).....	\$187,956	\$277	\$417,708
Massachusetts (Boston).....	3,069,622	123,257	1,458,151
New York.....	20,040,232	2,733,115	87,803,893
Philadelphia.....	1,082,219	245,895	2,287,572
Maryland (Baltimore).....	278,191	24,034	1,779,099
Virginia (Norfolk).....	632,189	335,202	1,332,849
New Orleans.....	2,316,770	9,363	2,028,422
Galveston.....	137,355		6,109,422
San Francisco.....	1,208,405	65,152	136,954
Washington (Seattle).....	1,660,563	20,263	638,713
Buffalo.....	709,114	24,533	1,251,083
Chicago.....	476,846	119,671	115,397
Michigan (Detroit).....	440,763	23,960	2,406,668
Total.....	32,238,127	3,723,346	69,706,839

The figures show a favorable balance of \$27,528,703 on merchandise transactions for the week ended September 25 in the 13 customs districts. The districts cited handled about 91 per cent of the import and export business of the country, based on the transactions in July, 1915.

Cotton exported during the week ended September 25 amounted to 129,707 bales, making the total since August 1, 1915, approximately, 437,205 bales.

BUSINESS MEN'S LEAGUE STARTS SPANISH CLASS.

[Commercial Agent George W. Doonan, St. Louis, Sept. 21.]

The Foreign Trade Bureau of the Business Men's League of St. Louis inaugurated to-day a noon-day Spanish class. Interest in foreign trade in the Mississippi Valley, especially with the Latin-American countries, is increasing daily. In normal times in Mexico the manufacturers and merchants of St. Louis do a thriving export business with that country, and of late years they are taking an active interest in Central and South American fields. About a year ago the Business Men's League sent a delegation of business men to the east and west coasts of South America to study conditions and report upon the possibilities of introducing the manufactured products of St. Louis in those markets.

It is realized that one of the essential factors in building up trade relations with the Latin-American Republics is a knowledge of the Spanish language, and with a view to filling a real need the Foreign Bureau of the Business Men's League decided to inaugurate a Spanish class. The class will meet on Tuesdays and Thursdays of each week at 12.30 p. m. in the office of the league and receive instruction for 30 minutes from a competent teacher. The first meeting was attended by 60 people, who are either members of the league or in the employ of league members, representing the leading industries of the city, including shoes, dry goods, hats, drugs and chemicals, flour, electrical supplies, photographic supplies, paint, lumber, steel, wire rope, woodenware, glass, canned fruit, and banks. Mr. Allen W. Clark, vice chairman of the Foreign Trade Bureau, in opening the class stated that there has been an increase of 300 per cent in the attendance at the day and night Spanish classes of the public schools during the past year, and that now about 2,500 students are studying Spanish.

NEW YORK EXCHANGE GAINS GROUND IN CHILE.

[Chargé d'Affaires George T. Summerlin, American Embassy, Santiago, Chile, Aug. 10.]

Several bills drawn on New York have appeared in the market lately, and it is apparent that the demand for them is growing. This is due partly to an increased demand for New York exchange to cover importations, and also to the fact that some sellers of nitrate are now willing to take New York drafts in payment of their product.

A decree recently issued by the Minister of the Interior permitted the waterworks of Valparaiso to contract a loan in terms of American dollars. This decree states the equivalent of the pound sterling to be \$4.80 United States currency, and it is feared by Americans here that this may be considered by some as the estimate of the present value of the dollar. However, this question is to be taken up shortly with the Minister of Hacienda, in connection with a proposed decree to authorize exporters of nitrate to pay a certain percentage of the export duty by drafts on New York.

Many large companies are insisting upon being paid in American money. In this way the demand for our bills will continue to increase.

[An article on dollar exchange in Chile was published in **COMMERCE REPORTS** for Sept. 20, 1915.]

SAWMILL DIRECTORY OF UNITED STATES.

For the benefit of all who would know where the hardwoods and the softwoods in their numerous varieties are to be found, the Bureau of Foreign and Domestic Commerce, and the Forest Service have cooperated in publishing a directory of American sawmills, which might also be described, because of the detailed information regarding timber, as a complete guide to the forest resources of the United States.

This accurate knowledge of the places from which lumber may be obtained is one result of the closer Government supervision of forests, as the same service that protects the trees gathers the facts that will aid factories and dealers.

The history of this branch of American industry is a record of shifting production from extreme Northeast to the northern part of the central section of the country, to the South and West, and the directory of sawmills shows the proportions of the total output now derived from each of these sections.

This publication, with its detailed information, offers almost a glimpse of the mills in operation, for the returns compiled tell of the kinds of wood each produces, the capacity of the plant in board feet per day, and per cent of output in boards, timbers, or framing. They indicate mills producing laths, shooks, ties, or shingles, and record the largest size a mill can furnish, largest size it can dress, largest it can kiln-dry, the least thickness it can resaw, and its specialties.

A rapid survey of the field of production is afforded by a map of the United States presenting in graphic form the yield of lumber in 1912 by States and kinds of wood. It shows large amounts from such States as Louisiana, Washington, Oregon, Michigan, North Carolina, Wisconsin, Virginia, West Virginia, Mississippi, Arkansas, Pennsylvania, Minnesota, and others, with smaller amounts down to the less productive States. There are also tables giving similar data for the various species, and a list of associations with the addresses of their officers and the kinds of wood the members produce. Rail and water routes to the individual mills are indicated in the returns from their owners that are published.

The book, which is Miscellaneous Series No. 27 of the publications of the Bureau of Foreign and Domestic Commerce, may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., or from the branch offices of the Bureau, at 25 cents per copy.

TRADE LETTER FILE AT CONSULATE.

[Consul Robertson Honey, Madrid, Sept. 1.]

The American consulate at Madrid, in order to keep its records in such form that accurate data may be at hand forthwith, has adopted the custom of making an extra copy of lists of possible agents for American exporters who ask to be supplied with such lists. This is placed in a special file. American exporters are now being requested to notify the consulate as to their selection of their representative from the list furnished. A similar practice has been inaugurated with reference to "Foreign Trade Opportunities."

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Dental supplies, No. 2465.—Sealed proposals will be received at the Medical Supply Depot, United States Army, Fort Mason, San Francisco, Cal., until October 4, 1915, for furnishing and delivering at Warehouse D, foot of Laguna Street, Fort Mason, San Francisco, Cal., dental supplies of all kinds.

Food products, No. 2466.—Sealed proposals will be received at the office of quartermaster, United States Army, 308 Gumbel Building, Kansas City, Mo., until October 5, 1915, for supplying white and yellow corn meal, hominy, prunes, peaches, coffee, pickles, lard, lard substitutes, butter, oleomargarine, sirup, baking powder, cream cheese, graham crackers, sugar-cured hams, oysters, etc.

Panama Canal supplies, No. 2467.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until October 6, 1915, for furnishing by steamship, free of all charges, on dock at either Colon (Atlantic port), or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama: Engine lathe, forcing press, bench filing machines, valve-reseating outfits, bolt heading and forging machines, plate bending and straightening tools, double-angle shear, plate planer, flanging clamp, pipe machine, hand lever punch, metal-cutting saw, drill press, journal bearings, machine bolts, grip nuts, wagon wheels, copper wire, copper, steel, and brass tubing, globe valves, brass cocks, horse-shoe nails, cant hooks, night latches, soap polish, manila tags, memorandum and record books, paper, and creosoted lumber and piles. Circular No. 970.

Buoy bodies, No. 2468.—Sealed proposals will be received at the office of the lighthouse inspector, Tompkinsville, N. Y., until October 11, 1915, for furnishing and delivering to the lighthouse depot, Tompkinsville, N. Y., 10 acetylene buoy bodies, type S. Blank proposals and particulars may be had on application to the above office.

Lard and bacon, No. 2469.—Sealed proposals will be received at the General Depot of the Quartermaster Corps, United States Army, 115 East Ontario Street, Chicago, Ill., until October 6, 1915, for furnishing and delivering, on or before November 5, 1915, about 43,000 pounds of lard and about 2,000 cans of breakfast bacon and 720 pounds of breakfast bacon.

Panama Canal supplies, No. 2470.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until October 8, 1915, for furnishing, by steamship, free of all charges, on dock at either Colon (Atlantic port) or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama: Transformers, electric motor, electric cable and wire, fuses, outlet boxes, condulets and covers, conduit, cable taps, clusters, copper connectors, cut-outs, push buttons, sockets, reflectors, shades, lamps, switches and attachments, thermometers, cable end bells, brass screws, lacquer and varnish, vulcanized fiber, and cement paper or fuller board. Circular No. 971.

Red lead, No. 2471.—Sealed proposals will be received at the office of the Light-house Inspector, Tompkinsville, N. Y., until October 12, 1915, for furnishing and delivering at the General Lighthouse Depot, Tompkinsville, N. Y., 20,000 pounds of red lead. Further information may be had on application to the above office.

Painting, No. 2472.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until October 23, 1915, for painting the plastered walls and ceilings of the United States post office at Denver, Colo. Copies of specifications may be obtained at the Washington office and drawings of the building may be seen at the office of the architects, Messrs. Tracy, Swartout & Litchfield, No. 244 Fifth Avenue, New York, N. Y.; the Builders' Exchange, Chicago, Ill.; superintendent's office, Denver, Colo.; the office of the supervising superintendent, 403 Post Office and Courthouse, San Francisco, Cal.; and at the Washington office.

White zinc, No. 2473.—Sealed proposals will be received at the office of the lighthouse inspector, Tompkinsville, N. Y., until October 14, 1915, for furnishing 20,000 pounds of white zinc, in 12½-pound cans, boxed 100 pounds to the box. Further information may be had on application to the lighthouse inspector.

Gun carriages, No. 2474.—Sealed proposals will be received at the office of the Chief of Ordnance, United States Army, Washington, D. C., until October 23, 1915, for furnishing and delivering, f. o. b. cars contractor's works, 56 3-inch gun carriages, model of 1902. Prospective buyers will be allowed the use of brown prints of all the drawings of the necessary material, from which prints may be made at their expense, providing the department's drawings are not taken from the city of Washington and are returned within 24 hours. Further information may be had on application to the Chief of Ordnance, Washington, D. C.

GERMANY'S WINE PRODUCTION.

[Vice Consul Ernest L. Ives, Cologne, Aug. 25.]

Official statistics show that the wine crop of 1914 amounted to 24,335,327 gallons, as against 26,547,735 gallons in 1913. The former is the second smallest vintage since 1893, the smallest being in 1910, with 22,352,494 gallons. The following table shows the number of acres under cultivation, the amount produced, the value, and the average value per gallon for the years 1893 to 1914, with the exception of the years 1899, 1900, and 1901:

Years.	Number of acres under cultivation.	Amount produced.	Value.	Average value per gallon.
		<i>Gallons.</i>		
1893.....	286,063	100,922,418	\$31,439,800	\$0.32
1894.....	287,095	74,612,896	15,969,800	.21

Brief Facts About New Zealand.

Consul General Alfred A. Winslow, of Auckland, has prepared a circular letter which covers some of the "pertinent facts American exporters should know about New Zealand trade." This may be had from him on application. Mr. Winslow comments: "If American interests will come after this business in earnest, they can have 25 or 30 per cent of it instead of 9 per cent. The tide has turned, but it needs pushing along."

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Underwear and hosiery, No. 18487.—A business man in India writes an American consular officer that he desires to be put in touch with American manufacturers and exporters of underwear and hosiery for women. Correspondence may be in English.

Chinaware, cutlery, glassware, etc., No. 18488.—A wholesale and retail merchant in Africa informs an American consular officer that he desires to receive catalogues and full information relative to cash boxes, chinaware, cutlery, enamel ware, glassware, cheap lamps, hosiery, small oil stoves, stationery, toys, underwear, and cheap watches and clocks. Correspondence may be in English.

Tourist agencies, No. 18489.—An American consular officer in Brazil has been advised that a firm in his district proposes to arrange various tours for Brazilians in the United States for 1916, and it is desirous of receiving information from American tourist agencies concerning routes, facilities of travel, etc.

Copying presses, fezzes, jewelry, etc., No. 18490.—A wholesale and retail firm in Africa has requested an American consular officer to supply catalogues and full information relative to copying presses, fezzes, imitation jewelry, metal beds, metal polish, patent medicines, shears and scissors, toys, and tricycles. Correspondence may be in English.

Iron kettles, No. 18491.—An American consular officer in Honduras writes that an importer and merchant in his district wishes to receive prices, shipping weights, etc., of cast-iron kettles, ranging in sizes from one-half gallon up. Quotations should be f. o. b. New Orleans or New York. Prices and full information should also be supplied to the consular officer. It is stated that the import duty is levied against the gross weight of the shipments, and the merchant desires to keep the weight as low as possible. Correspondence may be in English.

Chemicals and patent medicines, No. 18492.—A business man in India informs an American consular officer that he desires to be put in touch with American manufacturers and exporters of patent medicines and chemicals of all kinds. Correspondence may be in English.

Food products, groceries, etc., No. 18493.—A broker and manufacturers' agent in Honduras informs an American consular officer that he is seeking connections with American manufacturers and exporters of groceries and food products. Correspondence may be in English.

Boots and shoes, No. 18494.—An American consular officer in South Africa transmits the name and address of a business man in his district who desires to represent American manufacturers and exporters of boots and shoes for women. Correspondence may be in English.

Hardware, watches and clocks, etc., No. 18495.—A firm in East Africa writes an American consular officer that it desires to receive catalogues and full information relative to aluminum and enamel ware, cutlery, small hardware, and clocks and watches. Correspondence may be in English.

Chemicals, etc., No. 18496.—An American consular officer in Siberia writes that he has been informed that preparations for use in a laboratory of organic chemistry are desired by a professor in his district.

Piece goods, No. 18497.—A firm in India informs an American consular officer that it desires to establish commercial relations with American manufacturers and exporters of piece goods of various kinds.

Haberdashery, No. 18498.—An American consular officer in Greece transmits the name and address of a firm in his district which desires to be placed in communication with American exporters of a general line of haberdashery. Quotations are desired f. o. b. New York. Payment is to be made for the first orders cash against documents; later the firm will ask for usual credit terms. The firm wishes to act on a commission basis. Correspondence is preferred in French, but may be in English.
